

Novell® GroupWise® Mobile Server, Powered by Intellisync

For years, Novell® GroupWise® has enhanced knowledge worker productivity. Now it's addressing the latest requirement in workgroup collaboration: wireless synchronization. Novell GroupWise Mobile Server, powered by Intellisync, securely syncs e-mail, appointments, tasks and contacts between GroupWise and hundreds of wireless devices.

Reliably Connect a World Gone Wireless

Today's mobile professionals are doing a lot more than talking on their cell phones. They are boosting their productivity with smart phones—devices that give them access to e-mail, appointments, attachments and data from the Internet and corporate applications. Now, with the introduction of GroupWise Mobile Server, users can synchronize collaboration information between nearly any mobile device and their Novell GroupWise accounts—instantly boosting productivity and making GroupWise a more effective “home base” for information sharing than ever before.

With GroupWise Mobile Server, your users have secure access to e-mail, appointments, tasks and notes from anywhere. They can view almost any type of attachment (word processing documents, spreadsheets or presentations) in graphical format. And when you enable the integrated “push” technology, GroupWise Mobile Server pushes data to the mobile device (through a wireless carrier of your choice or over WiFi) as soon as it

arrives in the user's inbox. With GroupWise Mobile Server, your knowledge workers across the globe have secure access to real-time communications from virtually any device, on any platform and at any time of the day or night.

Support Wireless Your Way

In the wireless world, as in many others, choice is everything. You need the freedom to support user productivity and business goals on Linux*, Windows* or any mix of client platforms—and on any combination of wireless devices that meets your business needs. With this in mind, Novell has set out to offer the best and widest array of wireless synchronization solutions on the market.

If you have users on Palm* Treos, HP iPAQ* Pocket PCs, Nokia*, Motorola* or any of the other 400-plus devices supported by Intellisync, GroupWise Mobile Server will sync collaboration information between the server and the device. In fact, GroupWise Mobile Server works on handhelds, personal digital assistants (PDAs), laptops and tablet PCs, all from a broad range of vendors.†

† GroupWise Mobile Server supports hundreds of devices, but the extensive list does not include the BlackBerry*. To integrate GroupWise with BlackBerry devices, you will need to install Research In Motion's (RIM's) BlackBerry Enterprise Server (BES). Please visit www.blackberry.com/go/groupwise for more information on BlackBerry options and offers for GroupWise users.

According to a recent IDC report, the mobile worker population will increase from more than 650 million worldwide in 2004 to more than 850 million in 2009. This represents more than one quarter of the worldwide workforce.

Supported operating systems include Palm O/S*, Symbian*, Windows Mobile*, SmartPhone*, PocketPC*, SyncML*, J2ME* and many more. And to optimize user productivity, GroupWise Mobile Server presents a consistent look and feel across all platforms.

Secure Your Mobile Communications

To ensure secure communication between the mobile device and your GroupWise Mobile Server, you can choose from among three encryption standards:

- *Triple Data Encryption Standard (DES)*
- *Advanced Encryption Standard (AES), a block cipher standard with 128-bit keys*
- *Secure Sockets Layer (SSL)*

You can also sync without encryption if you don't require secure communications. GroupWise Mobile Server does not create any inbound-initiated connections to the corporate firewall and uses packet-level filtering to ensure the data and sender are valid. It also has a "kill pill" to remotely deactivate devices and destroy data when a user leaves a device behind in an airport, taxi or anywhere else.

Simplify the Delivery of Mobile Services

Administrators are all too familiar with the time and expense involved in delivering mobile services to an ever-increasing set of users: evaluating options, managing vendor relationships, navigating the purchase process, budgeting for software—and then repeating the process every time a new device type is added to the mix. GroupWise Mobile Server greatly simplifies this process, allowing administrators to support multiple devices on multiple operating systems for an unlimited number of users—and all at no cost beyond GroupWise maintenance or upgrade protection.

Work with the Best—for Less

GroupWise Mobile Server will be available only to GroupWise 7 customers with maintenance or upgrade protection. For those with this coverage, the process is as simple as downloading the enhancement pack via the Customer Care Portal free of charge. If you purchase GroupWise with maintenance or upgrade protection after the enhancement pack is released, you will also be entitled to GroupWise Mobile Server. Either way, you'll save money and eliminate the complexity of evaluating and purchasing multiple wireless gateways to support mobile users.
