

Endpoint Management ZENworks Application Virtualization v7.2

Chris Gacesa
CGacesa@novell.com

About This Document

Each Demo will have two or three pieces of documentation, to be used as follows:

1. Use this Quickstart to prepare for your demo meeting. It includes everything you need to know to get the right virtual machines started and ready to begin showing the solution. Use this Quickstart if you are building the demo locally on your own hardware or if you are accessing a pre-built version on the Novell Online Demo System (NODS)
2. Once your demo virtual machines are started and at the right place you're ready to begin your demo. If you know the products and your customer's requirements then you can go ahead and deliver your own demo using the system. However if you would like further instructions then the Tutorial will give you a guide of how to drive the demo.
3. In some cases a third piece - a Sample Demo is provided, which gives an illustration of how the solution might be shown to a customer.
4. For online copies of all these documents please visit the [Novell Demo Systems Portal](#).

Brief Description

This demo is based on a single Microsoft Windows 7 Enterprise Edition workstation running ZENworks Application Virtualization v7.2 (powered by Xenocode). You will be able to demonstrate the following:

- Launching of virtual applications that have been created
- Creating of simple virtual Applications using built in Templates (Firefox v3.5 and GroupWise Instant Messenger) or as a standalone 3rd Party Installation (if you do not have Internet Connectivity)
- Verify that the application is indeed virtual i.e. running on a thumb drive
- Creating Applications with a component built in (Create Firefox v3.5 and add Microsoft's Silverlight Component to it)
- ZCM Integration – Creating and configuring virtual applications so that it checks to ensure that the ZENworks Adaptive agent installed on the device

Setup Instructions

Virtual Machines

ZAVwin7UTP			
IP address	Memory	Disk Space	Creation Date
172.17.2.57	1024	127 GB	01/12/09

User ID's

As this is a Microsoft Windows 7 machine, the Administrator account has not been created, however the following User's are both Administrative users.

u:bob p:novell

u:tina p:novell

Useful URLs

Preparing The Demo

Extract the ZAVwin7UTPDec09.part0x.rar set of files to a directory of your choice and start the vm using vmware

- Login as either Bob or Tina
- All the virtual applications that have been created have been placed in the ZAVApps directory on the Desktop and have a naming convention of <App>-Vx
- To demo the creation new virtual applications, watch the flash tutorial for ZENworks Application Virtualization

Notes / Issues

All virtual applications created on the vm uses an Internal License specifically assigned to the Novell Demo System. Use of these virtual applications on systems other than the Novell Demo System is strictly prohibited.

Where next?

- Visit our documentation site at <http://www.novell.com/communities/demosystems/endpoint-management/zav>
- Watch the Flash Tutorial for your demo or read the demo script, where provided.
- Watch the Sample Flash Demo if one is provided.
- In case of any issues please post your query to the support forum at <http://forums.novell.com/novell-product-support-forums/utopia/>
