Recent Announcements From Novell

New Architectural Model
At BrainShare 2000 in Salt Lake City, Novell announced its new architectural model, code-named DENIM, or Directory-enabled Net Infrastructure Model. DENIM is designed to serve the following three areas of Net services:

• Net Management Services, including Net management, security, and policy management services
• Net Content Services, including publishing, storage, and delivery services
• Net Portal Services, including integration, identity, and knowledge services

DENIM encompasses Novell’s Net Services software, which is designed to enable companies to simplify, secure, and accelerate e-business environments. Net Services is a category of software that secures and powers all types of networks and platforms as a single network. For more information about DENIM, visit http://www.novell.com/press/archive/2000/03/pr00046.html.

New Online NetWare Community
On May 3, 2000, Cool Solutions, a Novell users’ web site, will introduce a new online community for NetWare users. This community will feature tips, questions and answers, and articles about NetWare. This community will also highlight real-world solutions that NetWare users have developed. You can find this community at http://www.novell.com/coolsolutions/netware on May 3, 2000.

Novell Announces Partnership with CMGI, Sun Microsystems
Novell, CMGI, and Sun Microsystems Inc. have announced a partnership to build a worldwide network of data centers designed to speed the delivery of Internet content. The network will be run by CMGion, which will be a subsidiary of CMGI. Novell will contribute NDS eDirectory, Novell Internet Caching Services (ICS), and digitalme technologies. Sun Microsystems will contribute high-end servers. For more information about this partnership, visit http://www.novell.com/press/archive/2000/04/pr00057.html.

Support for New Products
Novell has recently announced support for the following new products from third-party vendors:

• PowerApp.cache appliance servers from Dell, a high-performance caching server designed to meet the needs of e-business applications. The PowerApp server will use Novell ICS technology to provide caching services.
• FAXCOM from Biscom Inc., a fax server that is tightly integrated with NDS eDirectory.

For more information about Novell’s support for these products, visit http://www.novell.com/press.
