

# Novell's Latest Announcements

## NMAS Starter Pack for Windows NT/2000

Novell recently released Novell Modular Authentication Service (NMAS) Starter Pack for Windows NT/2000. NMAS was previously available exclusively for NetWare but now offers a flexible authentication framework for Windows NT/2000 environments as well.

NMAS Starter Pack for Windows NT/2000 provides secure authentication capabilities for Windows NT/2000 environments. For example, users can authenticate to the network using a combination of methods including passwords, tokens, smart cards, and digital certificates.

NMAS Starter Pack for Windows NT/2000 is available free to NetWare and Windows NT/2000 users through Novell Software Downloads ([www.novell.com/download](http://www.novell.com/download)).

## PartnerNet 2001

Novell is enhancing its worldwide channel partner program, PartnerNet, to promote and reward the growth of Novell's channel partners. PartnerNet 2001 will also provide additional tools, training, and support to channel partners. Specifically, PartnerNet 2001 offers channel partners the following benefits:

- Access to Novell technologies and tools that will help accelerate a company's e-business transformation
- Access to Business Solution Offerings (BSOs), which are e-business solutions developed by Novell Consulting
- Revenue sharing through co-engagements with Novell Consulting
- Advanced technical training
- Increased technical-support benefits

To drive the sharing of revenue opportunities, Novell's sales forces will be compensated for business generated through referrals to channel partners.

For more information about PartnerNet 2001 benefits and requirements, visit [www.novell.com/partnet](http://www.novell.com/partnet). You can also contact your local Novell office.

## Novell Internet Messaging System 2.6

Novell recently announced the availability of Novell Internet Messaging System 2.6. This software provides Internet Service Providers (ISPs) and Application Service Providers (ASPs) with a reliable wireless messaging system.

Novell Internet Messaging System 2.6 enables users to read, send, reply to, forward, and delete e-mail messages from wireless devices. Novell Internet Messaging System 2.6 also secures communications using the Open Secure Sockets Layer (OpenSSL) or Transport Layer Security (TLS) Internet security standard.

Built on NDS eDirectory, Novell Internet Messaging System 2.6 offers simplified management features that allow ISPs or ASPs to add new servers, to add groups of new users, or to change server configurations without needing to shut down the system. Novell Internet Messaging System 2.6 also supports the Linux, Solaris, and NetWare platforms.

For more information about Novell Internet Messaging System 2.6, visit Novell's web site at [www.novell.com/nims](http://www.novell.com/nims).

## ZENworks for Servers 2

Novell recently released ZENworks for Servers 2, software that simplifies and automates server management. By providing software and data distribution to servers across the Internet and internal networks, ZENworks for Servers 2 enables businesses to easily share resources with customers, partners, and suppliers.

In addition, ZENworks for Servers 2 integrates with NDS eDirectory, allowing you to manage multiple servers from a single location. ZENworks for Servers 2 also integrates with ZENworks for Desktops, providing tools for managing individual workstations across your entire network.

ZENworks for Servers 2 licenses are available for U.S. \$59 per user. A per-server license is also available for U.S. \$3,000 per server. In addition, a ZENworks

for Servers 2 and ZENworks for Desktops bundle is available for U.S. \$79 per user license. Licenses are available through authorized Novell resellers, by calling Novell's Customer Response Center at 1-888-321-4272, or by visiting <http://shop.novell.com>. For more information about ZENworks for Servers, visit Novell's web site at [www.novell.com/products/zenworks](http://www.novell.com/products/zenworks).

## iChain 1.5, Novell eGuide 1.5, and eNDPS

At COMDEX in Las Vegas, Novell announced the availability of new versions of iChain, Novell eGuide, and Embedded Novell Distributed Print Services (eNDPS). iChain 1.5 is a security and management infrastructure for e-businesses. Novell eGuide 1.5 is a web-based "white pages" application. eNDPS adds new web-based remote management capabilities to previous versions of NDPS. In addition, eNDPS includes a software developer's kit (SDK), enabling third-party companies to develop products that integrate with eNDPS.

For more information about each of these products, visit Novell's web site at [www.novell.com/products](http://www.novell.com/products).

## Novell Provides Net Acceleration Services to Franco-German Forum

Novell recently used its Internet Caching System (ICS) technology to provide streaming Internet broadcasts for the Franco-German Forum on the European Information Society. The event, which was held October 27-28 in Berlin, was a conference attended by approximately 100 leading industrialists, journalists, academics, and politicians who are directly involved in the development of technology in the Information Society. For more information about Novell's part in the Franco-German Forum, visit [www.novell.com/press/archive/2000/10/pr00106.html](http://www.novell.com/press/archive/2000/10/pr00106.html).
