Introduction

Course Objectives	Intro-2
Audience	Intro-2
Certification and Prerequisites	Intro-3
SUSE Linux Enterprise Server 10 Support and Maintenance	Intro-5
Novell Customer Center	Intro-6
SUSE Linux Enterprise Server 10 Online Resources	Intro-7
Agenda	Intro-8
Scenario	Intro-9
Exercises	Intro-9
Exercise Conventions	Intro-10

SECTION 1 Install SUSE Linux Enterprise Server 10

Objectives	1-1
Objective 1 Perform a SLES 10 Installation	1-2
Boot from the Installation Media	1-2
Select the System Language	1-5
Select the Installation Mode	1-6
Set the Clock and Time Zone	1-8
Understand and Change the Installation Settings	1-9
Verify Partitioning	1-10
Select Software	1-24

	Start the Installation Process	1-27
Objective 2	Configure the SLES 10 Installation	1-28
	Set the Host Name	1-28
	Set the root Password	1-29
	Configure the Network	1-31
	Test the Internet Connection	1-38
	Novell Customer Center Configuration and Online Update	1-39
	Configure Network Services	1-42
	Manage Users	1-43
	Configure Hardware	1-47
	Finalize the Installation Process	1-49
Objective 3	Troubleshoot the Installation Process	1-50
	Exercise 1-1 Install SUSE Linux Enterprise Server 10	1-53
	Summary	1-54
SECTION 2	Administer the Linux File System	
	Objectives	2-1
Objective 1	Select a Linux File System	2-2
	Linux File Systems	2-3
	Virtual Filesystem Switch	2-5
	Linux File System Internals	2-6
	File System Journaling	2-13
	Additional File System Documentation	2-14
Objective 2	Configure Linux File System Partitions	2-16
	Linux Device and Partition Names	2-16
	Design Guidelines for Implementing Partitions	2-18
	Manage Partitions with YaST	2-21
	Manage Partitions with fdisk	2-23
Objective 3	Manage Linux File Systems.	2-30
	Create a File System with YaST	2-30
	Create a File System with Command Line Tools	2-32

	Mount File Systems	2-36
	Exercise 2-1 Configure Partitions on your Hard Drive	2-43
	Monitor and Check a File System	2-44
	Exercise 2-2 Manage File Systems from the Command Line	2-50
Objective 4	Configure Logical Volume Manager (LVM) and Software RAID	2-51
	Use VM Components	2-52
	Use LVM Features	2-55
	Configure Logical Volumes with YaST	2-56
	Configure LVM with Command Line Tools	2-62
	Manage Software RAID	2-65
	Exercise 2-3 Create Logical Volumes	2-68
Objective 5	Set up and Configure Disk Quotas.	2-69
	Prepare the File System	2-70
	Initialize the Quota System	2-71
	Start and Activate the Quota Service	2-71
	Configure and Manage User and Group Quotas	2-72
	Exercise 2-4 Set up and Configure Disk Quotas	2-76
	Summary	2-77
 SECTION 3 Administer User Access and Security		
	Objectives	3-1
Objective 1	Configure User Authentication with PAM	3-2
	Location and Purpose of PAM Configuration Files	3-4
	PAM Configuration	3-5
	PAM Configuration File Examples	3-8
	Secure Password Guidelines	3-11
	PAM Documentation Resources	3-12
	Exercise 3-1 Configure PAM Authentication	3-13
Objective 2	Manage and Secure the Linux User Environment.	3-14
	Perform Administrative Tasks as root	3-14

	Delegate Administrative Tasks with sudo	3-17
	Set Defaults for New User Accounts	3-20
	Configure Security Settings	3-23
	Exercise 3-2 Configure the Password Security Settings	3-34
Objective 3	Use Access Control Lists (ACLs) for Advanced Access Control	3-35
	The Basics of ACLs	3-35
	Basic ACL Commands	3-36
	Important ACL Terms	3-37
	ACL Types	3-38
	How ACLs and Permission Bits Map to Each Other	3-40
	Use the ACL Command Line Tools	3-42
	Configure a Directory with an Access ACL	3-43
	Configure a Directory with a Default ACL	3-48
	Additional setfacl Options	3-52
	The ACL Check Algorithm	3-52
	How Applications Handle ACLs	3-53
	Exercise 3-3 Use ACLs	3-54
	Summary	3-55
SECTION 4	Configure the Network Manually	
	Objectives	4-1
Objective 1	Understand Linux Network Terms	4-2
Objective 2	Set up Network Interfaces with the ip Tool	4-3
	Display the Current Network Configuration	4-3
	Change the Current Network Configuration	4-9
	Save Device Settings to a Configuration File	4-11
Objective 3	Set up Routing with the ip Tool	4-16
	View the Routing Table	4-16
	Add Routes to the Routing Table	4-18
	Delete Routes from the Routing Table	4-19

	Save Routing Settings to a Configuration File	4-19
Objective 4	Test the Network Connection with Command Line Tools . . .	4-21
	Test Network Connections with ping	4-21
	Trace Network Packets with traceroute	4-23
	Exercise 4-1 Configure the Network Connection Manually . .	4-25
Objective 5	Configure Host Name and Name Resolution.	4-26
	Set the Host and Domain Name	4-26
	Configure Name Resolution	4-27
Objective 6	Configure the Network with NetworkManager.	4-28
	Summary	4-31

SECTION 5 Administer Linux Processes and Services

	Objectives	5-1
Objective 1	View and Manage Processes	5-2
	Understand Process Definitions	5-2
	Learn Jobs and Processes	5-5
	Manage Foreground and Background Processes	5-6
	View and Prioritize Processes	5-9
	End a Process	5-17
	Understand Services (Daemons)	5-21
	Manage a Daemon Process	5-22
	Exercise 5-1 Manage Linux Processes	5-25
Objective 2	Schedule Jobs.	5-26
	Schedule a Job (cron)	5-26
	Run a Job One Time Only (at)	5-31
	Exercise 5-2 Schedule Jobs with cron and at	5-33
	Summary	5-34

SECTION 6 Monitor SUSE Linux Enterprise Server 10

	Objectives	6-1
Objective 1	Monitor a SUSE Linux Enterprise Server 10 System	6-2
	Boot Log Information	6-2
	Hardware Information (/proc/)	6-5
	Hardware Information (Command Line Utilities)	6-6
	System and Process Information (Command Line Utilities) ..	6-7
	Monitor Hard Drive Space	6-11
	Exercise 6-1 Gather Information on your SUSE Linux Enterprise Server 10.....	6-12
Objective 2	Use System Logging Services	6-13
	The Syslog Daemon syslog-ng	6-13
	Important Log Files	6-22
	Archive Log Files (logrotate)	6-24
	Exercise 6-2 Manage System Logging.....	6-28
Objective 3	Monitor Login Activity	6-29
	Summary	6-34

SECTION 7 Manage System Initialization

	Objectives	7-1
Objective 1	Describe the Linux Load Procedure	7-2
Objective 2	GRUB (Grand Unified Bootloader).....	7-7
	What a Boot Manager Is	7-7
	Boot Managers in SUSE Linux	7-8
	Start the GRUB Shell	7-10
	Modify the GRUB Configuration File	7-12
	Configure GRUB with YaST	7-14
	Boot a System Directly into a Shell	7-18
	Exercise 7-1 Manage the Boot Loader	7-21

Objective 3	Manage Runlevels	7-22
	The init Program and Linux Runlevels	7-22
	init Scripts and Runlevel Directories	7-27
	Change the Runlevel	7-40
	Exercise 7-2 Manage Runlevels	7-43
	Summary	7-44
SECTION 8	Manage Software for SUSE Linux Enterprise Server	
	Objectives	8-1
Objective 1	Manage RPM Software Packages	8-2
	RPM Components and Features	8-2
	RPM Basics	8-4
	Manage Software Packages with RPM	8-6
	Exercise 8-1 Manage Software with RPM	8-17
Objective 2	Verify and Update Software Library Access	8-18
	Software Library Basics	8-18
	View Shared Library Dependencies	8-20
	Modify the Software Library Configuration File	8-22
	Update the Library Cache	8-23
	Exercise 8-2 Manage Shared Libraries	8-24
	Summary	8-25
SECTION 9	Manage Backup and Recovery	
	Objectives	9-1
	Introduction	9-2
Objective 1	Develop a Backup Strategy	9-3
	Choose a Backup Method	9-3
	Choose the Right Backup Media	9-6
Objective 2	Back up Files with YaST	9-7

	Back up System Data with YaST	9-7
	Restore System Data with YaST	9-13
	Exercise 9-1 Back up Files with YaST	9-18
Objective 3	Create Backups with tar	9-19
	Create tar Archives	9-19
	Unpack tar Archives	9-21
	Exclude Files from Backup	9-21
	Perform Incremental and Differential Backups	9-22
	Use tar Command Line Options	9-24
	Exercise 9-2 Create Backup Files with tar	9-25
Objective 4	Work with Magnetic Tapes	9-26
Objective 5	Copy Data with dd	9-29
	Exercise 9-3 Create Drive Images with dd	9-31
Objective 6	Mirror Directories with rsync	9-32
	Perform Local Copying	9-32
	Perform Remote Copying	9-34
	Exercise 9-4 Create a Backup of a Home Directory with rsync	9-36
Objective 7	Automate Data Backups with cron	9-37
	Exercise 9-5 Configure a cron Job for Data Backups	9-38
	Summary	9-39
SECTION 10	Manage Printing	
	Objectives	10-1
Objective 1	Configure Local Printing	10-2
	When to Configure a Printer	10-2
	Required Printing Software	10-3
	Add a Printer	10-4
	Exercise 10-1 Change Your Printer Configuration	10-19
Objective 2	Manage Print Jobs and Queues	10-20

	Generate a Print Job	10-21
	Display Information on Print Jobs	10-22
	Cancel Print Jobs	10-25
	Manage Queues	10-25
	Configure Queues	10-26
	Start and Stop CUPS	10-30
	Exercise 10-2 Manage Printers from the Command Line . . .	10-31
Objective 3	Understand how CUPS Works.	10-32
	Steps of the Printing Process	10-32
	Print Queues	10-34
	Log Files	10-37
	Configuration File	10-41
Objective 4	Configure and Manage a Print Server	10-42
	Broadcast Information on Printers to other Computers	10-42
	Access Restrictions	10-46
	Restrict Access to Printers for Users and Groups	10-49
	Restrict Access to the Web Interface	10-51
	Exercise 10-3 Restrict Access	10-53
Objective 5	Use the Web Interface to Manage a CUPS Server	10-54
	Do Administration Tasks	10-55
	Manage Printer Classes	10-56
	On-Line Help	10-57
	Manage Jobs	10-57
	Manage Printers	10-58
	Exercise 10-4 Use the Web Interface to Manage a CUPS Server.	10-60
	Summary	10-61

SECTION 11 **Configure Remote Access**

	Objectives	11-1
Objective 1	Provide Secure Remote Access with OpenSSH	11-2
	Cryptography Basics	11-3
	SSH Features and Architecture	11-6
	Configure the SSH Server	11-15
	Configure the SSH Client	11-16
	SSH-Related Commands	11-17
	Exercise 11-1 Practice Using OpenSSH.	11-22
	Public Key Authentication Management	11-23
	Exercise 11-2 Perform Public Key Authentication	11-28
Objective 2	Enable Remote Administration with YaST	11-29
	VNC and YaST Remote Administration	11-29
	Configure your Server for Remote Administration	11-30
	Access your Server for Remote Administration	11-32
	Exercise 11-3 Use Remote Administration	11-34
	Summary	11-35
