DoubleCheck Integrates Novell Security and Identity Management Products into its Governance, Risk, Compliance and Testing Solution Suite

DATELINE – May 9, 2007 – DoubleCheck today announced from the Gartner Compliance & Risk Management Summit it is integrating security and identity management products from Novell into its DoubleCheck GRC+T (Governance, Risk, Compliance and Testing) Solution Suite. This is the first integrated solution to provide customers with a bridge between risk management and IT as it links those key data assets into an organization's overall compliance management framework.

“By integrating Sentinel from Novell, the control test environment is seamlessly connected to a customer's IT infrastructure via the DoubleCheck Test Center. In addition, Novell Identity Manager provides functionality for monitoring Segregation of Duties (SOD) controls and testing. By integrating these two flagship Novell products into the DoubleCheck Solution Suite we can provide customers a real time test and exception notification process for control management. The automation of control management and testing will improve visibility into the IT environment for management and reduce audit costs. We are proud and excited to be working with a world class company in Novell to bring this comprehensive GRC solution to market,” said Joseph Cincotta, President/CEO of DoubleCheck.

The DoubleCheck™ GRC+T Solution Suite is a policy driven, risk centric set of key software modules that bridge the SOX Compliance Controls Framework to GRC Management, with IT and Financial Automated Controls Testing, Monitoring and Administration. It starts with S-O Comply™ at its core and is built upon robust three tier Java based architecture. S-O Comply™ and all of the DoubleCheck™ GRC+T Solution Suite components are highly scalable and offer a total upgrade path to small and large enterprise users alike. DoubleCheck products enable the unification of governance, risk, compliance and testing (GRC +T) across any organization, regardless of size or industry.

“Increased federal regulations drive the need for technologies that better address the compliance and auditing requirement of enterprises,” said Reed Harrison, Chief Technology Officer, Compliance Solutions, Novell. “By working with DoubleCheck to incorporate our security and identity management products into their GRC+T Solution

Suite, we are delivering on our strategy of providing customers with comprehensive, full-featured GRC management solutions.”

The seamlessly integrated components are highly tunable and easily configurable to variations in corporate governance framework methodologies. The DoubleCheck™ GRC+T Solution Suite is ideally suited to provide the tools, information and reporting systems essential to a productive, efficient and well-organized workflow for any size or type of organization.

About DoubleCheck
