

Business Case: Why Your CIO Needs Novell® ZENworks® Endpoint Security Management

Why Your CIO Needs Novell ZENworks Endpoint Security Management

The Threat Assessment you just received should provide you with a baseline overview of your existing security landscape, and indicate where enforcement is needed. Novell ZENworks Endpoint Security Management can provide comprehensive endpoint protection—from core to periphery—without draining your budget or overburdening your IT staff.

Whether you're concerned about identify theft, fraud and other internal threats, or meeting increasing regulatory requirements, the number of threats to your network is increasing each year. While there's no way to completely eliminate all security exposures, Novell can help you identify and remediate vulnerabilities as soon as they're discovered.

You need systems and processes, such as data protection, access control and device configuration management, that mitigate these risks, protect your vulnerabilities and ensure best practice objectives for endpoint security. Novell ZENworks Endpoint Security Management can help your organization:

1. Significantly lower costs and risks
2. Obtain world-class, bulletproof security
3. Meet regulatory compliance mandates
4. Deliver and manage solutions from within a simple, single console

Through our infrastructure software and ecosystem of partnerships, Novell harmoniously integrates mixed IT environments, allowing people and technology to work as one. We deliver the best-engineered, most interoperable Linux platform and a portfolio of integrated IT management software that help businesses worldwide reduce cost, complexity and risk.
