

# Web Access Management Made Easy with Novell® Services

Organizations need proven and efficient ways to successfully implement secure, Web-based access to data and systems. Novell can help. With extensive experience in planning and implementing identity and access management solutions, Novell® Services can deliver a solid access management solution that's tailored to your unique needs.

### Web Access Management Provides Strategic Benefits

When correctly implemented, Web Access Management capabilities enable organizations to provide data and business processes securely via the Web. Exposing critical business processes and data requires establishing trusted relationships with every user before granting access, a task that can easily become an administrative nightmare if not implemented correctly.

Web Access Management engagements from Novell IT Consulting and its network of partners are on-site consulting engagements designed to ensure your Web Access Management solution is implemented and operating correctly. Beginning with a strategic view of how the Web Access Management capability supports your business, a Web Access Management engagement ensures that all aspects of your Identity and Access Management solution design are carefully considered before delivering a comprehensive Web Access Management solution that

provides secure identity-based access both inside and outside the corporate walls.

### Why Web Access Management?

Web Access Management supports corporate policies while simplifying interactions with employees, customers and partners. It puts the right Web resources in the hands of the right users.

Adoption of Web Access Management addresses compliance needs, privacy and legal pressures, business requirements and security concerns. Common themes include:

- *Regulatory compliance (such as HIPAA, BLG, 21 CFR Part 11, European Data Protection Directive, Canadian Privacy Act, ITAR, Sarbanes-Oxley)*
- *Industry framework standards (such as PCIDSS, ISO, HITRUST CSF, COBIT)*
- *Connectivity, identity federation with partners and suppliers*
- *Management of access to data and applications*

- **Solutions:**  
Identity and Access Management
- **Products:**  
Novell Access Manager

Novell Identity and Access Management solutions provide integrated capabilities to manage user privileges using defined business policies and rules to govern access to enterprise resources.

Novell Web Access Management puts the right Web resources in the hands of the right users, comparing individual user profiles with an organization's business rules to determine on a case-by-case basis if a user should be granted or denied access to specific data, functions or areas.
