

Get Started with Security Information and Event Management from Novell

Protecting your critical information is a complex, never-ending challenge. Novell can help—with the first identity-enabled, automated security monitoring platform backed by a team of expert consultants and proven methodologies. Build a powerful and flexible SIEM and log management foundation that automatically monitors and manages critical security devices, logs and activities.

Faster, More Efficient Risk Management

What's the fastest, most efficient way to implement a next-generation Security Information and Event Management (SIEM) solution that perfectly matches your business requirements and works seamlessly with your existing technology infrastructure? The answer is an on-site consulting engagement with Novell® IT Consulting or one of its global partners. Novell can help you plan, deploy and customize an effective log management solution, as well as a more in-depth Novell Sentinel Standard Deployment engagement that will accelerate your efforts to create a complete SIEM architecture.

Log Management Made Easy

IT managers and auditors face overwhelming complexity as they try to monitor and manage logs from many different sources. Novell Sentinel™ Log Manager directly addresses these challenges by providing storage, data management, reporting and search

capabilities for organizations' system logs. Novell IT Consulting can help you get started quickly with a variety of targeted consulting engagements. These include:

- **Novell Sentinel Log Manager planning and assessment.** *This three-day engagement provides a quick, high-level overview of the business, security and technical issues you can address with Novell Sentinel Log Manager. It includes an analysis of your current security architecture—followed by suggestions for integrating all your network resources and access policies into a comprehensive event monitoring and response solution.*
- **Novell Sentinel Log Manager implementation.** *This week-long engagement offers a targeted implementation for organizations that have pressing compliance needs—or those that just want to get started immediately. With this engagement, you select up to five collectors from our predefined collector*

■ Solutions:

Compliance Management

■ Products:

Novell Sentinel

Novell Sentinel is ready to help you:

- Manage security events across a complete range of security devices and activities
- Monitor and audit your Novell Identity Manager solution
- Meet your most demanding compliance requirements

Novell IT Consulting and its partners will give you the fastest and most reliable path to an integrated, simplified SIEM solution. Start taking advantage of our proven expertise, experience, tools and methodologies—contact your local Novell representative or partner today.

list and work with experienced consultants to perform a deployment that is right for your environment.

- **Custom collector development and deployment.** *Novell Sentinel Log Manager has open architecture that can be customized to connect to virtually any data source and provide a nearly limitless variety of custom reports. This engagement focuses on helping you fine-tune the product to fully integrate it with your unique mix of local policies and procedures.*

Novell Sentinel Standard Deployment Engagement

Novell Sentinel provides one of the industry's most robust and fully functional SIEM solutions. The Novell Sentinel Standard Deployment engagement is designed to help you plan, build and deploy a SIEM solution that meets all your objectives and maximizes your investment in Novell Sentinel technology. This engagement includes:

- **Assessment and recommendations.** *A careful analysis of your business and technical requirements will identify key business drivers and define critical compliance and regulatory standards.*

- **A production deployment road map.** *Your consulting team will develop a detailed production roadmap that identifies event sources, connection methodologies and component capacity specifications; defines detailed system component implementation and rollback plans; and finalizes detailed testing plans.*
- **A production pilot implementation of Novell Sentinel.** *After a lab implementation and thorough testing, your consulting team will deploy a limited pilot of the solution into your production environment. This step involves connecting a representative group of devices to the new Novell Sentinel SIEM solution and testing the full range of functionality.*
- **Knowledge transfer.** *This final step features an in-depth walkthrough of the architectural components, roadmap and implementation plan with select members of your IT staff.*
