# About This Guide

Most organizations test new products in a lab setting prior to making them available for general use.

This guide is designed to help you set up a Novell® Open Enterprise Server 2 SP2 server in a lab environment, using a specific and simplified configuration. The configuration is limited in scope and is meant only to acquaint you with OES 2 and provide exposure to the Novell products it contains.

To help you with your transition from NetWare® to Open Enterprise Server 2 SP2 (OES 2 SP2), this guide also includes instructions for setting up a NetWare 6.5 SP8 virtual machine running on an OES 2 SP2 host server.

- ♦ Chapter 1, “Installing the OES 2 SP2 Server in Your Lab,” on page 11
- ♦ Chapter 2, “Installing a NetWare Virtual Machine,” on page 27
- ♦ Chapter 3, “eDirectory, Users and Groups, and Identity Services,” on page 45
- ♦ Chapter 4, “eDirectory Linux Access (LUM),” on page 59
- ♦ Chapter 5, “Novell CIFS on OES 2,” on page 65
- ♦ Chapter 7, “Novell AFP,” on page 71
- ♦ Chapter 6, “NetWare CIFS and AFP on OES 2,” on page 67
- ♦ Chapter 8, “iFolder 3.8,” on page 73
- ♦ Chapter 9, “iPrint,” on page 79
- ♦ Chapter 10, “NetStorage,” on page 85
- ♦ Chapter 11, “Getting Acquainted with OES,” on page 89
- ♦ Appendix A, “Supplementary Information,” on page 107

## Guide Purposes

The instructions in this guide will help you do the following:

- ♦ Install an OES 2 SP2 server into a new eDirectory™ tree named EXAMPLE\_TREE
- ♦ Install selected OES 2 components on the server
- ♦ Install an OES 2 SP2 virtual machine host server, create a virtual machine (VM) on the server, and install NetWare 6.5 SP8 on the VM
- ♦ Create seven different user types, at least one of which should closely align with the users on your network
- ♦ Perform simple tasks to get acquainted with basic OES 2 services on a Windows® 2000/XP workstation

## About the Information Flow in This Guide

The sections in this guide are designed to be accessed sequentially, guiding you through the main tasks of setting up an OES 2 exploration lab:

1. Installing OES 2 and virtualized NetWare servers in the lab.

2. Setting up the eDirectory infrastructure: User objects, Group objects, passwords, etc.
3. Reviewing the services featured in the guide and performing all additional setup tasks required for testing and exploring the features.
4. Testing and exploring the features.

## Using This Guide as a Reference

If you want to install additional OES 2 servers, create a different tree structure than the one specified in this guide, or diverge from the instructions presented, you can still use these instructions as a basic outline for setting up OES 2 services in a lab environment. However, be aware that any divergence from the instructions presented or the order they are presented in, can cause ripple effects through the rest of the guide. If you need to diverge, refer to the information found in the following guides for assistance:

- ♦ *OES 2 SP2: Planning and Implementation Guide*
- ♦ *OES 2 SP2: Installation Guide*
- ♦ *OES2 SP2: Linux Tips for NetWare Administrators*
- ♦ *OES 2 SP2: Lab Guide for Linux and Virtualized NetWare*

## Where is Novell Samba?

The Novell Samba service available in previous versions of OES is still available. However, because it cannot run on the same server as Novell CIFS, instructions for installing and configuring a Samba service have been removed from this guide.

If you are interested in experimenting with the Novell Samba, refer to the Lab Guide distributed with the initial release of OES 2 and available from the [Previous Releases page on the OES 2 documentation Web site \(http://www.novell.com/documentation/oes2/previous-releases.html#previous-releases\)](http://www.novell.com/documentation/oes2/previous-releases.html#previous-releases).

## Feedback

We want to hear your comments and suggestions about this manual and the other documentation included with this product. Please use the User Comments feature at the bottom of each page of the online documentation, or go to [www.novell.com/documentation/feedback.html](http://www.novell.com/documentation/feedback.html) and enter your comments there.

## Documentation Conventions

In this documentation, a greater-than symbol (>) is used to separate actions within a step and items within a cross-reference path.

A trademark symbol (®, ™, etc.) denotes a Novell trademark. An asterisk (\*) denotes a third-party trademark.

# Installing the OES 2 SP2 Server in Your Lab

# 1

Use the instructions in this section to install Novell® Open Enterprise Server 2 SP2 (OES 2 SP2) in your lab.

- ♦ [Section 1.1, “Lab Setup Requirements,” on page 11](#)
- ♦ [Section 1.2, “Obtaining Installation Media,” on page 12](#)
- ♦ [Section 1.3, “Installing the Server Software,” on page 14](#)
- ♦ [Section 1.4, “Setting the Root Password, Configuring the Network, and Updating the Server,” on page 17](#)
- ♦ [Section 1.5, “Configuring eDirectory and OES Services,” on page 20](#)
- ♦ [Section 1.6, “Setting Up the Graphical User Interface,” on page 22](#)
- ♦ [Section 1.7, “Completing the EVMS Configuration,” on page 22](#)
- ♦ [Section 1.8, “Setting Up the Server as an SLP Directory Agent,” on page 23](#)
- ♦ [Section 1.9, “Accessing iManager,” on page 24](#)
- ♦ [Section 1.10, “Configuring the Browser for the eDirectory CA,” on page 25](#)
- ♦ [Section 1.11, “Enabling Pop-Ups for iManager,” on page 26](#)

## 1.1 Lab Setup Requirements

For the tasks and exercises described in this guide, you need the following:

- ❑ A server-class computer with the following:

Component	Minimum	Recommended
Processor	Pentium* II or AMD* K7 450 MHz	Pentium III, Pentium III Xeon*, Pentium 4, Intel* Xeon 700 MHz, AMD K8 CPUs (Athlon64 and Opteron*), Intel EM64T or higher processor
RAM	1 GB	2 GB
Display adapter	Super VGA	VESA 1.2-compliant, high resolution
Display monitor	Compatible with adapter	
CD drive	Support for the EITorito specification	
Hard drive	20 GB	
(All data will be erased)		
Network card	Ethernet 100 Mbps	

Component	Minimum	Recommended
IP address	<ul style="list-style-type: none"> <li>♦ IP address on the lab subnet. For example, 192.168.1.100.</li> <li>♦ Subnet mask. For example, 255.255.255.0.</li> <li>♦ Default gateway. For example, 192.168.1.1.</li> </ul>	
Mouse	Not required	USB or PS/2*

- ❑ A network printer with an assigned static IP address and a connection to your lab network.
- ❑ A Windows workstation with
  - ♦ One of the following platforms installed:
    - ♦ Windows XP
    - ♦ Windows 2000
  - ♦ An Ethernet 100 Mbps adapter
  - ♦ An IP address on the same subnet as the server
  - ♦ Mozilla\* Firefox\* browser installed. (This is optional, but Firefox is the assumed browser for most of the instructions in this guide)
  - ♦ A print driver installed on the workstation for the network printer listed above.
- ❑ (Optional for exploring Novell AFP and iPrint) An Apple\* Macintosh\* workstation with
  - ♦ Mac OS\* 10.4 or later installed
    - Novell AFP supports earlier versions of Mac OS, but iPrint doesn't.
  - ♦ An Ethernet adapter
  - ♦ An IP address on the same subnet as the server
  - ♦ A print driver installed on the workstation for the network printer listed above.

## 1.2 Obtaining Installation Media

To complete the instructions in this guide, you need to download various ISO files, depending on your hardware.

- ♦ [Section 1.2.1, “Identifying the Files to Download,” on page 12](#)
- ♦ [Section 1.2.2, “Downloading the Files,” on page 13](#)
- ♦ [Section 1.2.3, “Creating the Installation Media,” on page 13](#)

### 1.2.1 Identifying the Files to Download

You need to download the set of files in [Table 1-1](#) that matches the architecture (32-bit or 64-bit) of your server computers:

**Table 1-1** *Files to Download*

Platform	Files needed
32-bit server with CD drive	<ul style="list-style-type: none"><li>◆ SLES-10-SP3-CD-i386-GM-CD1.iso</li><li>◆ SLES-10-SP3-CD-i386-GM-CD2.iso</li><li>◆ SLES-10-SP3-CD-i386-GM-CD3.iso</li><li>◆ SLES-10-SP3-CD-i386-GM-CD4.iso</li><li>◆ OES2-SP2a-i386-CD1.iso</li></ul>
32-bit server with CD/DVD drive	<ul style="list-style-type: none"><li>◆ SLES-10-SP3-DVD-i386-GM-DVD1.iso</li><li>◆ OES2-SP2a-i386-CD1.iso</li></ul>
64-bit server with CD drive	<ul style="list-style-type: none"><li>◆ SLES-10-SP3-CD-x86_64-GM-CD1.iso</li><li>◆ SLES-10-SP3-CD-x86_64-GM-CD2.iso</li><li>◆ SLES-10-SP3-CD-x86_64-GM-CD3.iso</li><li>◆ SLES-10-SP3-CD-x86_64-GM-CD4.iso</li><li>◆ OES2-SP2a-x86_64-CD1.iso</li></ul>
64-bit server with CD/DVD drive	<ul style="list-style-type: none"><li>◆ SLES-10-SP3-DVD-x86_64-GM-DVD1.iso</li><li>◆ OES2-SP2a-x86_64-CD1.iso</li></ul>

**NOTE:** The SUSE® Linux Enterprise Server (SLES) 10 SP3 CD images are only available on the [SLES 10 SP3 download site \(http://download.novell.com/Download?buildid=Z4ysu62Q4gw~\)](http://download.novell.com/Download?buildid=Z4ysu62Q4gw~).

## 1.2.2 Downloading the Files

After identifying which files you need to download:

- 1 Go to “[Downloading OES 2 SP2 Software from the Novell Web Site](#)” in the *OES 2 SP2: Planning and Implementation Guide*.
- 2 Complete all the steps in the section, except the instructions on deciding which files to download. You should have already identified the files you need, using the list in [Section 1.2.1, “Identifying the Files to Download,”](#) on page 12.
- 3 Be sure to print the pages as instructed, record the two activation codes, print and check the MD5 verification checksums, and so on.
- 4 After you have downloaded all of the files you need, continue with [Creating the Installation Media](#).

## 1.2.3 Creating the Installation Media

To prepare physical installation media:

- 1 Go to “[Preparing Physical Media for a New Server Installation or an Upgrade](#)” in the *OES 2 SP2: Installation Guide* and use the instructions there to create media for installing your OES 2 server.

Continue with [Installing the Server Software](#).

## 1.3 Installing the Server Software

Complete the instructions in the following sections.

- ♦ [Section 1.3.1, “Prerequisites,” on page 14](#)
- ♦ [Section 1.3.2, “Procedure,” on page 14](#)

### 1.3.1 Prerequisites

Before installing OES 2 on your server, you must complete the following tasks:

- ❑ Ensure that the server computer meets the requirements outlined in [Section 1.1, “Lab Setup Requirements,” on page 11](#).
- ❑ Prepare the software for installation as explained in [Section 1.2, “Obtaining Installation Media,” on page 12](#).

### 1.3.2 Procedure

---

**WARNING:** This procedure permanently erases any data currently on your server’s hard drive.

---

- 1 Prepare the BIOS on your server machine so that it will boot from the CD-ROM drive first.
- 2 Insert the SLES 10 SP3 CD1 or DVD1 into your server and reboot the machine.
- 3 When the boot selection page appears, immediately press the Down-arrow key to select the *Installation* option, then press Enter.  
If you don’t respond before the machine starts booting from the hard disk, reboot the server and repeat this step.
- 4 After the boot process finishes, select an installation language, then click *Next*.
- 5 Read and agree to the software license agreement, then click *Next*.
- 6 Select *New Installation*, select the *Include Add-On Products from Separate Menu* option, then click *Next*.
- 7 On the Add-on Product Installation page, click *Add*.
- 8 Select *CD*, then click *Next*.
- 9 Insert the OES 2 SP2 CD as prompted, then click *Continue*.
- 10 After the catalog is added, read and agree to the OES 2 license agreement, then click *Next > Next*.
- 11 Select the time zone for the server, then click *Next*.
- 12 On the Installation Settings page, click *Partitioning*.  
If your server has existing partitions, the OES install tries to add new SLES partitions to them.
- 13 To ensure a clean install, use the following table to navigate the partitioning pages and prepare your system disk.

---

**IMPORTANT:** The steps in the following table prepare the system disk for management by the EVMS volume manager. This is only required if you want to have NSS volumes on the system disk, and is not the default use case. We have included the process in the lab guide to provide exposure to installing NSS volumes on a single-drive server.

For more information, see “[Installing with EVMS as the Volume Manager of the System Device](#)” in the *OES 2 SP2: Installation Guide*.

Create Logical Volume	<ol style="list-style-type: none"> <li>1. In the <i>Volume Name</i> field, type <code>sys_linux</code>.</li> <li>2. Click <i>Max</i>.</li> <li>3. Make sure the Mount Point is set to <code>/</code>.</li> <li>4. Click <i>OK</i>.</li> </ol>
EVMS Configuration	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Expert Partitioner	<ol style="list-style-type: none"> <li>1. Click <i>Finish</i>.</li> </ol>

**14** On the Installation Settings page, click *Software*.

Use the following table to navigate and configure the software pages:

Page Name	Action
Software Selection and System Tasks	<ol style="list-style-type: none"> <li>1. Under <i>Primary Functions</i>, deselect <i>Print Server</i> by clicking it twice.</li> <li>2. Under <i>OES Services</i>, select (or confirm the selection of) the following: <ul style="list-style-type: none"> <li>♦ <i>Novell AFP</i></li> <li>♦ <i>Novell CIFS</i></li> <li>♦ <i>Novell eDirectory*</i></li> <li>♦ <i>Novell iFolder</i></li> <li>♦ <i>Novell iManager</i></li> <li>♦ <i>Novell iPrint</i></li> <li>♦ <i>Novell NCP Server/Dynamic Storage Technology*</i></li> <li>♦ <i>Novell NetStorage</i></li> <li>♦ <i>Novell Storage Services*</i></li> </ul> <p>Services marked with an asterisk (*) are selected with AFP and CIFS.</p> <p><i>Novell Backup/Storage Management Services (SMS)</i>, <i>Novell Linux User Management</i>, and <i>Novell Remote Manager</i> are all selected by default when any other selections are made, and they are installed on every OES 2 server.</p> </li> <li>3. Click <i>Accept</i>.</li> </ol>
agfa fonts	<ol style="list-style-type: none"> <li>1. Click <i>Accept</i>.</li> </ol>
Installation Settings	<ol style="list-style-type: none"> <li>1. Click <i>Accept</i>.</li> </ol>
Confirm Installation	<ol style="list-style-type: none"> <li>1. Click <i>Install</i>.</li> </ol>

**15** When prompted, insert the SLES 10 media and click *Retry*.

If you are installing from DVD, insert DVD 1 when you are prompted for any SLES 10 media.  
If you are installing from CDs, insert them in order as instructed.

After the files are copied, the system configuration takes a few minutes to complete.

**16** Continue with [Setting the Root Password, Configuring the Network, and Updating the Server](#).

## 1.4 Setting the Root Password, Configuring the Network, and Updating the Server

After the initial system configuration and system reboot, the installation needs more information about the `root` user and the network.

- 1 Use the following table to navigate and complete the various configuration pages.

Page Name	Action
Password for the System Administrator "root"	1. Enter and confirm the <code>root</code> user password, then click <i>Next</i> .
Hostname and Domain Name	<ol style="list-style-type: none"> <li>1. In the <i>Host Name</i> field, type the DNS hostname for the IP address you are assigning to the server. For example, <code>myserver</code>.</li> <li>2. In the <i>Domain Name</i> field, type the <i>DNS Domain Name</i> for your network. For example, <code>mysite.company.example.com</code>.</li> <li>3. Deselect <i>Change Hostname via DHCP</i>.</li> <li>4. Click <i>Next</i>.</li> </ol>
Network Configuration	1. Click <i>Network Interfaces</i> .
Network Card Configuration Overview	<ol style="list-style-type: none"> <li>1. If your server has multiple network cards, select the card the server will use.</li> <li>2. Click <i>Edit</i>.</li> <li>3. Select <i>Static Address Setup</i>.</li> <li>4. In the <i>IP Address</i> field, type the IP address for the server. For example, <code>192.168.1.100</code></li> <li>5. Change the <i>Subnet Mask</i> if needed. For example, <code>255.255.255.0</code>.</li> <li>6. Click <i>Host Name and Name Server</i>.</li> </ol>
Host Name and Name Server Configuration	<ol style="list-style-type: none"> <li>1. Type the IP address of at least one name server and type your DNS domain name in the <i>Domain Search</i> field. For example, <code>company.example.com</code>.</li> <li>2. Click <i>OK</i>.</li> </ol>
Network Address Setup	1. Click <i>Routing</i> .
Routing Configuration	<ol style="list-style-type: none"> <li>1. Type the IP address of the default gateway for your lab subnet. For example, <code>192.168.1.1</code>.</li> <li>2. Click <i>OK</i>.</li> </ol>
Network Address Setup	1. Click <i>Next</i> .
Network Card Configuration Overview	1. Click <i>Next</i> .
Network Configuration	1. Click <i>Next</i> .
Test Internet Connection	<p>You will need to register your server on the Internet to download the latest patches, so you should test the Internet connection at this point to make sure everything is configured correctly.</p> <ol style="list-style-type: none"> <li>1. Select <i>Yes, Test Connection to the Internet</i>.</li> <li>2. Click <i>Next</i>.</li> </ol>

Page Name	Action
Running Internet Connection Test	<p>After a few moments, the <i>Test Status</i> should indicate <i>Success</i>.</p> <p>If it does not, you need to click <i>Back</i> and fix your network configuration and the connection to the Internet. It is essential that OES 2 servers always have the latest security and other critical patches downloaded and installed.</p> <ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Novell Customer Center Configuration	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol> <p>The server establishes a connection with the Novell Customer Center.</p>
Manual Interaction Required	<ol style="list-style-type: none"> <li>1. Click <i>Continue</i>.</li> </ol>
Novell Customer Center System Registration	<ol style="list-style-type: none"> <li>1. In the fields indicated, type and confirm the e-mail address to which you want administrative notifications sent.</li> <li>2. In the <i>Activation code for SLES components</i> field, type the SLES activation code you noted or printed while downloading the image files. <p>If this code is not entered, the server can't download updates and patches through the Novell patch channels.</p> </li> <li>3. In the <i>Activation code for OES components</i> field, type the OES 2 activation code you noted or printed while downloading the image files. <p>If this code is not entered, the same patch channel restriction applies as for SLES.</p> </li> <li>4. Click <i>Submit</i>. <p>Your registration information is sent to the Customer Center. This might take a couple of minutes to complete.</p> </li> <li>5. Click <i>Continue</i>. <p>The update server is added to your system configuration. Again, this might take a few minutes.</p> </li> </ol>
Novell Customer Center Configuration pop-up	<ol style="list-style-type: none"> <li>1. Click <i>OK</i>.</li> </ol>

Page Name	Action
Online Update	<p>Depending on the patches that are in the Update channels, you might need to run the update process more than once.</p> <ol style="list-style-type: none"> <li>1. Select <i>Run Update</i>, then click <i>Next</i>. Although you might need to scroll down to see them, the correct patches are automatically selected. Do not change the selections.</li> <li>2. Click <i>Accept</i>. The update patches are downloaded and installed.</li> <li>3. When both status bars indicate <i>100%</i>, click <i>Next &gt; OK</i>. The system refreshes or restarts, depending on the patches in the channel.</li> <li>4. If the patch dialog box reappears with additional patches selected, click <i>Accept</i> and repeat Step 3. If the Installation Settings page appears, continue with the next row.</li> </ol>
Installation Settings	<ol style="list-style-type: none"> <li>1. If there is no red text under the CA Management link, click <i>Next &gt; Next</i> and skip to <a href="#">Section 1.5, "Configuring eDirectory and OES Services," on page 20</a>. If the system restarted, there is red text under CA Management. This is because the installation no longer has the <code>root</code> password in memory.</li> <li>2. Click <i>CA Management</i>.</li> </ol>
Managing CAs and Certificates	<ol style="list-style-type: none"> <li>1. Click <i>Edit Default Settings</i>.</li> </ol>
Edit Default Settings	<ol style="list-style-type: none"> <li>1. Type the <code>root</code> password in the <i>Password</i> and <i>Confirm Password</i> fields, then click <i>Next</i>. There is no need to fill in the other fields because the default CA will be replaced with a secure eDirectory™ Organizational CA later in the installation process.</li> </ol>
Managing CAs and Certificates	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Installation Settings	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>

2 Continue with [Configuring eDirectory and OES Services](#).

## 1.5 Configuring eDirectory and OES Services

For the exercises in this guide, you need specific eDirectory, NTP, and SLP configurations.

1 Use the following table to navigate and complete the eDirectory pages:

Page Name	Action
eDirectory Configuration - New or Existing Tree	<ol style="list-style-type: none"> <li>1. In the <i>Tree Name</i> field, type <code>EXAMPLE_TREE</code>.  Notice that the <i>Use eDirectory Certificates for HTTPS Services</i> option is selected. This option configures all of the HTTPS services (OES 2 and SLES 10) to use the new eDirectory tree's Organizational CA for certificate management and encryption of HTTPS communications.  For more information on the value this adds to your network, see "<a href="#">Certificate Management</a>" in the <i>OES 2 SP2: Planning and Implementation Guide</i>.  2. Click <i>Next</i>.</li> </ol>
eDirectory Configuration - New Tree Information	<ol style="list-style-type: none"> <li>1. In the <i>FDN Admin Name with Context</i> field, type <code>CN=admin.O=COMPANY</code>.  In this guide, the Admin User object is named admin (all lowercase) to differentiate the name from the object itself (Admin User), which is a standard eDirectory object and is always capitalized in the documentation by convention.  The eDirectory Admin User object can have any name you choose, although most administrators use "admin."  In this guide, all container objects, such as COMPANY, are created in uppercase so they are more easily distinguished in the illustrations and procedures.  2. In the <i>Admin Password</i> and <i>Verify Admin Password</i> fields, specify the password for the eDirectory Admin User.  3. Click <i>Next</i>.</li> </ol>
eDirectory Configuration - Local Server Configuration	<ol style="list-style-type: none"> <li>1. Change the server context to <code>OU=SERVERS.OU=LAB.O=COMPANY</code>.</li> <li>2. Click <i>Next</i>.</li> </ol>
eDirectory Configuration - NTP and SLP	<p>Time synchronization is required for eDirectory.</p> <ol style="list-style-type: none"> <li>1. Type the IP address or DNS name of the reliable, external Network Time Protocol (NTP) server you want the servers in your tree to use for time synchronization.</li> <li>2. Click <i>Next</i>.</li> </ol>
SLP Configuration	<ol style="list-style-type: none"> <li>1. Click <i>Yes</i> to confirm that SLP is not being configured at this time.  Later in this guide you will configure this server as the SLP Directory Agent. For more information on SLP, see "<a href="#">SLP</a>" in the <i>OES 2 SP2: Planning and Implementation Guide</i>.</li> </ol>
Novell Modular Authentication Services	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Novell Open Enterprise Server Configuration	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.  The eDirectory and iManager configuration processes can take a few minutes or much longer depending on the server processor speed, etc. The other OES services should self-configure fairly quickly.</li> </ol>

Page Name	Action
User Authentication Method	1. Click <i>Next</i> .
New Local User	The local <code>root</code> user was created during the SLES install. On OES 2 servers, we recommend that all users except <code>root</code> be defined in eDirectory. Therefore, you don't create additional local users.  1. Click <i>Next</i> .
Empty User Login	1. Click <i>Yes</i> .
Release Notes	1. Click <i>Next</i> .  The official <a href="http://www.novell.com/documentation/oes2/oes_readme/data/readme.html">OES 2 Release Notes (http://www.novell.com/documentation/oes2/oes_readme/data/readme.html)</a> are published with the <a href="http://www.novell.com/documentation/oes2">OES 2 Online Documentation (http://www.novell.com/documentation/oes2)</a> .

- 2 Continue with **Setting Up the Graphical User Interface**.

## 1.6 Setting Up the Graphical User Interface

Although most Linux servers don't have a graphical user interface loaded, the lab server you are installing has the GNOME\* interface loaded by default.

When the Hardware Configuration page appears:

- 1 Review the Graphics Cards configuration to make sure your monitor was detected and that your color and resolution settings are the way you want them.  
If the settings are correct, skip to **Step 3**.
- 2 If the configuration is incomplete or wrong, click the blue links to configure your monitor, color, resolution, etc.
- 3 Click *Next*.
- 4 When the *Installation Completed* page appears, deselect *Clone This System for Autoyast*, then click *Finish*.
- 5 When the login splash page appears, continue with **Completing the EVMS Configuration**.

## 1.7 Completing the EVMS Configuration

Because the lab exercises involve an NSS partition on the system hard disk, and because NSS requires EVMS for full functionality on the system hard disk, the instructions in **Section 1.3**, “Installing the Server Software,” on page 14 led you through setting up your lab server's hard disk to be managed by EVMS.

Now it's time to finish the EVMS configuration:

- 1 Log in to the server as the `root` user.
- 2 When the desktop loads, click *Computer > YaST Administrator Settings*.
- 3 In the YaST Control Center, click *System > System Services (Runlevel)*.
- 4 Select *Expert Mode*.

- 5 In the *Service* list, select *boot.evms*, click the *Set/Reset* drop-down list, then select *Enable the service*.
- 6 In the *Service* list, select *boot.lvm*, click the *Set/Reset* drop-down list, then select *Disable the service*.
- 7 In the *Service* list, select *boot.md*, click the *Set/Reset* drop-down list, then select *Disable the service*.
- 8 Click *Finish > Yes*.
- 9 Close the YaST Control Center.
- 10 Restart the computer by clicking *Computer > Log out > Log out*.
- 11 At the bottom of the Login splash screen, click *Reboot*, then type the `root` password and press Enter.
- 12 After the server restarts, continue with [Setting Up the Server as an SLP Directory Agent](#).

## 1.8 Setting Up the Server as an SLP Directory Agent

For OES 2 services to work, the OES 2 server must have one of the following:

- ♦ **An eDirectory replica installed on the server.** This is not automatic after the third server installed in a tree because it is not recommended to have more than three to five replicas in the tree.

This means that in a large network with many servers, most of the servers won't have replicas, which leaves only the OpenSLP option.

- ♦ **OpenSLP running on the server with eDirectory as a registered service.** This requires that you configure a network server (for example, the first server in the tree) as an SLP Directory Agent (DA), and then configure the other network servers that don't have an eDirectory replica to point to the DA server.

For the lab setup, you don't actually need SLP services set up because each of the two lab servers (this server and the NetWare<sup>®</sup> VM) has an eDirectory replica. However, it's important to understand the basics of setting up SLP on OES 2. For more information, see “SLP” in the [OES 2 SP2: Planning and Implementation Guide](#).

- 1 Log in to the server as `root`.
- 2 Click *Computer > Home Folder*.
- 3 In the left panel, double-click *File System*, then double-click the `etc` directory.
- 4 Scroll down to the `slp.conf` file, right-click the file, and select *Open with gedit*.
- 5 In `slp.conf`, find the following line:  

```
;net.slp.useScopes = myScope1, myScope2, myScope3
```
- 6 Remove the semicolon (;) and change the line as follows:  

```
net.slp.useScopes = Directory
```
- 7 Find:  

```
;net.slp.isDA = true
```
- 8 Remove the semicolon (;) so that it reads:

```
net.slp.isDA = true
```

- 9 Save and close the file and the file browser.
- 10 Configure the firewall on the DA server to allow SLP daemon traffic:
  - 10a Click *Computer > YaST Administrator Settings*, then click *Security and Users > Firewall*.
  - 10b In the left navigation frame, click *Allowed Services*.
  - 10c Click the *Services to Allow* drop-down list and select *SLP Daemon*.
  - 10d Click *Add > Next*.
  - 10e Click *Accept*.
- 11 Click *Computer > Gnome Terminal*.
- 12 At the command prompt, enter the following command to restart the SLP daemon with the changed configuration:

```
rcslpd restart
```
- 13 Restart eDirectory by entering the following command:

```
rcndsd restart
```

This registers eDirectory as an SLP service.
- 14 After eDirectory restarts, enter the following command:

```
slptool findsrvs service:ndap.novell
```

After a moment or two, the system should respond with a line that indicates `EXAMPLE_TREE` is being advertised as a service in SLP.
- 15 Close the terminal by entering the following command:

```
exit
```
- 16 Continue with [Accessing iManager](#).

## 1.9 Accessing iManager

---

**IMPORTANT:** You must access iManager multiple times in this guide. If you get a Tomcat error in response to any launch requests, see [Section A.2, “iManager Tomcat Error,” on page 109](#).

---

Novell iManager is the main browser-based tool you use to manage eDirectory and your OES 2 services.

To start iManager and prepare your browser for future sessions:

- 1 On your lab workstation, in your Web browser, open the OES 2 Welcome page by entering the following URL:

```
http://IP_or_DNS
```

where *IP\_or\_DNS* is the IP address or DNS name of your OES 2 server.
- 2 In the left navigation bar, click *Management Services*.
- 3 Under *Available Services*, click *iManager*.

You can also start iManager directly by including `/nps` after *IP\_or\_DNS* in the access URL. For example, enter `http://192.168.1.100/nps`.
- 4 You should receive a certificate security alert. Accept the certificate temporarily.

You eliminate this error in the next section.

**5** Log in as the eDirectory Admin user:

**5a** In the *Username* field, type `admin`.

**5b** In the *Password* field, type the eDirectory Admin user password.

**5c** In the *Tree* field, type `example_tree`.

If SLP services are not working properly, you need to enter the IP address instead of the tree name.

**5d** Click *Login*.

**6** Do not close iManager. Continue with the next section, [Configuring the Browser for the eDirectory CA](#).

## 1.10 Configuring the Browser for the eDirectory CA

The certificate error you received in the previous section was generated because Web browsers don't trust eDirectory-based certificate authorities by default.

To eliminate the errors, you must import the eDirectory CA certificate into your browser.

- ♦ [Section 1.10.1, "Exporting the CA's Self-Signed Certificate," on page 25](#)
- ♦ [Section 1.10.2, "Importing the CA Certificate into Mozilla Firefox on Windows," on page 25](#)

### 1.10.1 Exporting the CA's Self-Signed Certificate

**1** In iManager, click the *Roles and Tasks* icon .

**2** Click *Novell Certificate Server > Configure Certificate Authority*.

**3** Click the *Certificates* tab, then select the check box for the *self-signed certificate*.

**4** Click the *Export* sub-tab.

**5** Deselect *Export Private Key*.

The *Export Format* changes to DER.

**6** Click *Next*.

**7** Click *Save the Exported Certificate* and save the file to disk, noting the filename and location if indicated.

**8** Click *Close > OK*.

**9** Find the file you just saved. By default it is usually on the desktop.

**10** To configure Mozilla Firefox on Windows, continue with [Importing the CA Certificate into Mozilla Firefox on Windows](#).

Instructions for configuring other browsers are in ["Eliminating Browser Certificate Errors"](#) in the *OES 2 SP2: Planning and Implementation Guide*.

### 1.10.2 Importing the CA Certificate into Mozilla Firefox on Windows

**1** In Firefox, click *Tools > Options > Advanced*.

- 2 Select the *Encryption* tab.
- 3 Click *View Certificates*.
- 4 Select the *Authorities* tab, then click *Import*.
- 5 Browse to the certificate file you downloaded in “Exporting the CA’s Self-Signed Certificate” on page 25 and click *Open*.
- 6 Select *Trust this CA to identify Web sites*, then click *OK > OK > OK*.  
Firefox now trusts certificates from the servers in your lab’s tree.
- 7 To verify success, close all instances of Firefox, then restart the browser and log in to iManager again.  
The certificate warning doesn’t appear.

## 1.11 Enabling Pop-Ups for iManager

Some iManager plug-ins use pop-up dialog boxes that are blocked by most browsers. To use iManager, you must enable pop-ups that originate from the servers where iManager is running.

Because there are as many ways to enable pop-ups as there are browser versions, we are only including instructions for Firefox 3.5.x. If you are using a different browser, see the help included with your browser for instructions.

- 1 On the Firefox menu bar, click *Tools > Options > Content*.
- 2 Disable all pop-up blocking by deselecting the *Block Popup Windows* option and clicking *OK*.  
or  
Add the lab server to the list of exceptions by doing the following:
  - 2a Click the *Exceptions* button.
  - 2b In the *Address of Web Site* field, type the OES 2 lab server’s IP address.
  - 2c Click *Allow > Close*.

Continue with [Chapter 2, “Installing a NetWare Virtual Machine,”](#) on page 27.

# Installing a NetWare Virtual Machine

# 2

Use the instructions in this section to install an Open Enterprise Server 2 (OES 2) virtual machine host server in your lab, create a virtual machine on the server, and install NetWare® 6.5 SP8 on the virtual machine.

This section describes the following:

- ♦ [Section 2.1, “Virtualization Host Server Requirements,” on page 27](#)
- ♦ [Section 2.2, “Installing the Virtualization Host Server,” on page 28](#)
- ♦ [Section 2.3, “Installing the NetWare 6.5 SP8 Virtual Machine,” on page 36](#)

## 2.1 Virtualization Host Server Requirements

For the tasks and exercises described in this section, you need the following in addition to those listed in [Section 1.1, “Lab Setup Requirements,” on page 11](#).

- ❑ A server-class computer with the following:

Component	Minimum	Recommended
Processor	Pentium II or AMD K7 450 MHz	Pentium III, Pentium III Xeon, Pentium 4, Intel Xeon 700 MHz, AMD K8 CPUs (Athlon64 and Opteron), Intel EM64T or higher processor
RAM	1 GB	2 GB
Display adapter	Super VGA	VESA 1.2-compliant, high resolution
CD drive	Supports the ElTorito Specification	
Hard drive	40 GB	
(All data will be erased)		
Network card	Ethernet 100 Mbps	
IP address	<ul style="list-style-type: none"><li>♦ Two IP addresses on the lab subnet (one for the OES 2 VM host and one for the NetWare VM). For example, 192.168.1.120 and 192.168.1.130.</li><li>♦ Subnet mask. For example, 255.255.255.0.</li><li>♦ Default gateway. For example, 192.168.1.1.</li></ul>	

Component	Minimum	Recommended
Mouse	Not required	USB or PS/2

- ❑ Installation software to match the processor type and removable media support of your VM host server.

If you need to download and prepare different media than you used for the first server, go to [Section 1.2, “Obtaining Installation Media,” on page 12](#).

---

**IMPORTANT:** For installing the virtualized NetWare 6.5 SP8 guest server, you download the NetWare DVD ISO file to the VM host server desktop after the host server is installed and running.

---

## 2.2 Installing the Virtualization Host Server

Although it is possible to install NetWare 6.5 SP8 on a SUSE® Linux Enterprise Server (SLES) 10 SP3 server that has no OES 2 services installed, we recommend that you install the basic OES 2 services on the host server to provide backup services through SMS and management services through Novell® Remote Manager.

---

**IMPORTANT:** Virtualized NetWare in Xen\* is an OES 2 product feature. Support of NetWare in a Xen virtual machine is available to only OES 2 registered customers.

---

Complete the instructions in the following sections.

- ♦ [Section 2.2.1, “Prerequisites,” on page 28](#)
- ♦ [Section 2.2.2, “Starting the Installation,” on page 28](#)
- ♦ [Section 2.2.3, “Setting the Root Password, Configuring the Network, and Updating the Server,” on page 31](#)
- ♦ [Section 2.2.4, “Configuring LDAP and OES Services,” on page 34](#)
- ♦ [Section 2.2.5, “Setting Up the Graphical User Interface,” on page 35](#)
- ♦ [Section 2.2.6, “Booting with the Xen Kernel,” on page 36](#)

### 2.2.1 Prerequisites

Before installing OES 2 on your server, you must complete the following task:

- ❑ Ensure that the server computer meets the requirements outlined in [Section 2.1, “Virtualization Host Server Requirements,” on page 27](#).

### 2.2.2 Starting the Installation

---

**WARNING:** This procedure permanently erases any data currently on your server’s hard drive.

---

- 1 Prepare the BIOS on your server machine so that it will boot from the CD-ROM drive first.
- 2 Insert the first SLES 10 SP3 CD (or DVD) into your server and reboot the machine.

- 3 When the boot selection page appears, immediately press the Down-arrow key to select the Installation option, then press Enter.  
If you don't respond before the machine starts booting from the hard disk, reboot and repeat this step.
- 4 After the boot process finishes, select an installation language, then click *Next*.
- 5 Read and agree to the software license agreement, then click *Next*.
- 6 Select *New Installation*, select the *Include add-on product from separate menu* option, then click *Next*.
- 7 On the Add-on Product Installation page, click *Add*.
- 8 Select *CD*, then click *Next*.
- 9 Insert the OES 2 SP2 CD as prompted.
- 10 After the catalog is added, read and agree to the OES 2 license agreement, then click *Next > Next*.
- 11 Select the time zone for the server, then click *Next*.
- 12 On the Installation Settings page, scroll down the list and click *Partitioning*.  
If your server has existing partitions, the OES install tries to add new SLES partitions to them.
- 13 To ensure a clean install, use the following table to navigate and configure the partitioning pages:

Page Name	Action
Suggested Partitioning	<ol style="list-style-type: none"> <li>1. Select <i>Create Custom Partition Setup</i>.</li> <li>2. Click <i>Next</i>.</li> </ol>
Preparing Hard Disk—Step 1	<ol style="list-style-type: none"> <li>1. Select <i>Custom Partitioning (for experts)</i>.</li> <li>2. Click <i>Next</i>.</li> </ol>
Expert Partitioner	<ol style="list-style-type: none"> <li>1. Click <i>Expert &gt; Delete partition table and disk label</i>.</li> <li>2. When prompted to select a new partition table type, click <i>OK</i>.</li> </ol>
Caution!	<ol style="list-style-type: none"> <li>1. Click <i>Yes</i>.</li> </ol>
Expert Partitioner	<p>First, you specify the <code>swap</code> partition information.</p> <ol style="list-style-type: none"> <li>1. Click <i>Create</i>.</li> </ol>
Which type of partition do you want to create?	<ol style="list-style-type: none"> <li>1. Select <i>Primary partition</i>.</li> <li>2. Click <i>OK</i>.</li> </ol>
Create a Primary Partition	<ol style="list-style-type: none"> <li>1. In the <i>File System</i> drop-down list, select <i>Swap</i>.</li> <li>2. In the <i>End</i> field, type <code>512M</code>.</li> <li>3. Click <i>OK</i>.</li> </ol>
Expert Partitioner	<p>Next, you specify information for the partition for installing the VM host server.</p> <ol style="list-style-type: none"> <li>1. Click <i>Create</i>.</li> </ol>
Which type of partition do you want to create?	<ol style="list-style-type: none"> <li>1. Select <i>Primary partition</i>.</li> <li>2. Click <i>OK</i>.</li> </ol>

Page Name	Action

**14** On the Installation Settings page, scroll down and click *Software*.

Use the following table to navigate and configure the software pages.

Page Name	Action
Software Selection and System Tasks	<ol style="list-style-type: none"> <li>1. Under OES Services, select <i>Novell Backup / Storage Management Services (SMS)</i>.   Notice that <i>Novell Linux User Management</i> and <i>Novell Remote Manager</i> are also selected by default.   These three are the only OES 2 services that are supported to run directly on a Xen virtualization host server.   All OES 2 services are supported to run on Xen guest servers.</li> <li>2. Under <i>Primary Functions</i>, deselect <i>Print Server</i> by clicking it twice.</li> <li>3. Under <i>Primary Functions</i>, select <i>Xen Virtual Machine Host Server</i>.</li> <li>4. Click <i>Accept</i>.</li> </ol>
agfa fonts	<ol style="list-style-type: none"> <li>1. Click <i>Accept</i>.</li> </ol>
Installation Settings	<ol style="list-style-type: none"> <li>1. Click <i>Accept</i>.</li> </ol>
Confirm Installation	<ol style="list-style-type: none"> <li>1. Click <i>Install</i>.</li> </ol>

- 15 When prompted, insert the SLES media and click *Retry*.  
If you are installing SLES from DVD, insert the DVD when you are prompted for CD1.  
Insert additional media as instructed.
- 16 After the files are copied, the system configuration takes a few minutes to complete.
- 17 If you are prompted for additional input during the configuration, accept the default actions.
- 18 Continue with [Setting the Root Password, Configuring the Network, and Updating the Server](#).

### 2.2.3 Setting the Root Password, Configuring the Network, and Updating the Server

After the initial system configuration and system reboot, the installation needs more information about the `root` user and the network.

- 1 Use the following table to navigate and complete the various configuration pages.

Page Name	Action
Password for the System Administrator "root"	1. Enter and confirm the <code>root</code> user password, then click <i>Next</i> .
Hostname and Domain Name	<ol style="list-style-type: none"> <li>1. In the <i>Host Name</i> field, type the DNS hostname for the IP address you are assigning to the server. For example, <code>myserver</code>.</li> <li>2. In the <i>Domain Name</i> field, type the <i>DNS Domain Name</i> for your network. For example, <code>mysite.company.example.com</code>.</li> <li>3. Deselect <i>Change Hostname via DHCP</i>.</li> <li>4. Click <i>Next</i>.</li> </ol>
Network Configuration	1. Click <i>Network Interfaces</i> .
Network Card Configuration Overview	<ol style="list-style-type: none"> <li>1. If your server has multiple network cards, select the card the server will use.</li> <li>2. Click <i>Edit</i>.</li> <li>3. Select <i>Static Address Setup</i>.</li> <li>4. In the <i>IP Address</i> field, type the IP address for the server. For example, <code>192.168.1.120</code></li> <li>5. Change the <i>Subnet Mask</i> if needed. For example, <code>255.255.255.0</code>.</li> <li>6. Click <i>Host Name and Name Server</i>.</li> </ol>
Host Name and Name Server Configuration	<ol style="list-style-type: none"> <li>1. Type the IP address of at least one name server and type your DNS domain name in the <i>Domain Search</i> field.</li> <li>2. Click <i>OK</i>.</li> </ol>
Network Address Setup	1. Click <i>Routing</i> .
Routing Configuration	<ol style="list-style-type: none"> <li>1. Type the IP address of the default gateway for your lab subnet. For example, <code>192.168.1.1</code>.</li> <li>2. Click <i>OK</i>.</li> </ol>
Network Address Setup	1. Click <i>Next</i> .
Network Card Configuration Overview	1. Click <i>Next</i> .
Network Configuration	1. Click <i>Next</i> .
Test Internet Connection	<p>You will need to register your server on the Internet to download the latest patches, so you should test the Internet connection at this point to make sure everything is configured correctly.</p> <ol style="list-style-type: none"> <li>1. Select <i>Yes, Test Connection to the Internet</i>.</li> <li>2. Click <i>Next</i>.</li> </ol>

Page Name	Action
Running Internet Connection Test	<p>After a few moments, the <i>Test Status</i> should indicate <i>Success</i>.</p> <p>If it does not, you need to click <i>Back</i> and fix your network configuration and the connection to the Internet. It is essential that OES 2 servers always have the latest security and other critical patches downloaded and installed.</p> <ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Novell Customer Center Configuration	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol> <p>The server establishes a connection with the Novell Customer Center.</p>
Manual Interaction Required	<ol style="list-style-type: none"> <li>1. Click <i>Continue</i>.</li> </ol>
Novell Customer Center System Registration	<ol style="list-style-type: none"> <li>1. In the fields indicated, type and confirm the e-mail address to which you want administrative notifications sent.</li> <li>2. In the <i>Activation code for SLES components</i> field, type the SLES activation code you noted or printed while downloading the image files. <p>If you don't enter this code, the server cannot receive software updates from the Novell patch channels.</p> </li> <li>3. In the <i>Activation code for OES components</i> field, type the OES 2 activation code you noted or printed while downloading the image files. <p>If you don't enter this code, the same patch channel restriction applies.</p> </li> <li>4. Click <i>Submit</i>. <p>Your registration information is sent to the Customer Center. This might take a couple of minutes to complete.</p> </li> <li>5. Click <i>Continue</i>. <p>The update server is added to your system configuration.</p> </li> </ol>
Novell Customer Center Configuration pop-up	<ol style="list-style-type: none"> <li>1. Click <i>OK</i>.</li> </ol>

Page Name	Action
Online Update	<p>You must run the update process twice. During the first run, patches to the update-related RPMs are downloaded and installed. The second run installs all critical and important patches.</p> <ol style="list-style-type: none"> <li>1. Select <i>Run Update</i>, then click <i>Next</i>. Although you might need to scroll down to see them, the correct patches are automatically selected. Do not change the selections.</li> <li>2. Click <i>Accept</i>. The update patches are downloaded and installed.</li> <li>3. When both status bars indicate <i>100%</i>, click <i>Next &gt; OK</i>. The system refreshes and the patch dialog box reappears with additional patches selected.</li> <li>4. Click <i>Accept</i>.</li> <li>5. If one or more notification dialog boxes appear, accept or continue through each one. Insert additional installation media as instructed. The security and other critical patches and updates are downloaded and installed.</li> <li>6. When both status bars indicate <i>100%</i>, click <i>Next &gt; OK</i>. The system restarts.</li> </ol>
Installation Settings	<p>Notice the red text under CA Management. This is because the system restarted and the installation no longer has the <code>root</code> password in memory.</p> <ol style="list-style-type: none"> <li>1. Click <i>CA Management</i>.</li> </ol>
Managing CAs and Certificates	<ol style="list-style-type: none"> <li>1. Click <i>Edit Default Settings</i>.</li> </ol>
Edit Default Settings	<ol style="list-style-type: none"> <li>1. Type the <code>root</code> password in the <i>Password</i> and <i>Confirm Password</i> fields, then click <i>Next</i>.</li> </ol>
Managing CAs and Certificates	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Installation Settings	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>

**2** Continue with **Configuring LDAP and OES Services**

## 2.2.4 Configuring LDAP and OES Services

The VM host server is not created as an object in eDirectory™, but it uses eDirectory LDAP for the OES 2 services installed on it.

**1** Use the following table to navigate and complete the eDirectory pages:

Page Name	Action
Configured LDAP Servers	<ol style="list-style-type: none"> <li>1. In the <i>eDirectory Tree Name</i> field, type <code>EXAMPLE_TREE</code>.</li> <li>2. In the <i>Admin User and Context</i> field, type <code>cn=admin.o=company</code>.</li> <li>3. In the <i>Admin Password</i> field, type the admin password.</li> <li>4. Under the <i>Configured LDAP Servers</i> list, click <i>Add</i>.</li> <li>5. Specify the IP address of the first lab server.</li> <li>6. Click <i>Add &gt; Next</i>.</li> <li>7. Click <i>Next</i>.</li> </ol>
Novell Open Enterprise Server Configuration	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol> <p>The configuration settings are saved for the OES services you've installed.</p>
User Authentication Method	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
New Local User	<p>The <code>root</code> user was created during the SLES install. On OES 2 servers (including virtualization host servers), we recommend that all users except <code>root</code> be defined in eDirectory. Therefore, you don't create additional local users.</p> <ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Empty User Login	<ol style="list-style-type: none"> <li>1. Click <i>Yes</i>.</li> </ol>
Release Notes	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol> <p>The official <a href="http://www.novell.com/documentation/oes2/oes_readme/data/readme.html">OES 2 Release Notes (http://www.novell.com/documentation/oes2/oes_readme/data/readme.html)</a> are published with the <a href="http://www.novell.com/documentation/oes2">OES 2 Online Documentation (http://www.novell.com/documentation/oes2)</a>.</p>

2 Continue with **Setting Up the Graphical User Interface**.

## 2.2.5 Setting Up the Graphical User Interface

When the Hardware Configuration page appears:

- 1 Review the Graphics Cards configuration to make sure your monitor was detected and that your color and resolution settings are the way you want them.  
If the settings are correct, skip to **Step 3**.
- 2 (Conditional) If the configuration is incomplete or wrong, click the blue links to configure your monitor, color, resolution, etc.
- 3 Click *Next*.

- 4 When the *Installation Completed* page appears, deselect *Clone This System for AutoYast* and click *Finish*.
- 5 Continue with **Booting with the Xen Kernel**.

## 2.2.6 Booting with the Xen Kernel

By default, the OES 2 server doesn't load the Xen kernel required for hosting virtual machines. To configure the server to boot the Xen kernel by default:

- 1 Log in to the server as `root`.
- 2 On the desktop, click *Computer > YaST*.
- 3 Click *System > Boot Loader*.
- 4 Select the *XEN* option and click *Set as Default*.
- 5 Click *Finish*.
- 6 Restart the server by clicking *Computer > Log Out > Log Out*. Then click *Reboot* and enter the `root` password.
- 7 Continue with **Installing the NetWare 6.5 SP8 Virtual Machine**.

## 2.3 Installing the NetWare 6.5 SP8 Virtual Machine

After preparing the virtualization host server, complete the following instructions. For complete information and instructions, see the [Novell Virtualization Technology documentation Web site](http://www.novell.com/documentation/vmserver/index.html) (<http://www.novell.com/documentation/vmserver/index.html>).

- ♦ **Section 2.3.1, “Disabling the Alt+Esc Shortcut on the VM Host Server,” on page 36**
- ♦ **Section 2.3.2, “Downloading the NetWare ISO File,” on page 37**
- ♦ **Section 2.3.3, “Creating a Virtual Machine and Installing NetWare,” on page 37**

### 2.3.1 Disabling the Alt+Esc Shortcut on the VM Host Server

Alt+Esc is used on a NetWare server to switch between console screens, but on SLES 10 it moves between open windows. To provide the expected behavior for the virtualized NetWare server, you must disable the shortcut for SLES 10.

- 1 On the host server as the `root` user, click *Computer > Control Center*.
- 2 Click *Personal > Shortcuts*.
- 3 Under the *Window Management* category, click *Move between windows immediately*, then press the Backspace key to disable the shortcut.
- 4 Click *Close*.
- 5 Close the Control Center.
- 6 Continue with **Downloading the NetWare ISO File**.

## 2.3.2 Downloading the NetWare ISO File

You install NetWare from the DVD .iso file copied to the server's hard drive.

- 1 On the host server, click *Computer > Firefox* and access the [NetWare 6.5 SP8 e Media Kit on the Novell Download Web site \(http://download.novell.com/Download?buildid=dpIR3H1ymhk~\)](http://download.novell.com/Download?buildid=dpIR3H1ymhk~).
- 2 On the evaluation page, click *Proceed to Download*.
- 3 Log in using your Novell Account information.
- 4 Click the *Download* button for the NW65SP8\_OVL\_DVD.iso file.
- 5 Select *Save to Disk* and click *OK*.  
The file is saved to the desktop.
- 6 After the file downloads, verify its integrity.
  - 6a Click *Computer > Gnome Terminal*.
  - 6b At the command prompt, enter `cd Desktop`.  
The terminal opens in the `root` user's home directory (`/root`). The desktop is contained in a subfolder of `/root` named `Desktop`.
  - 6c Check the MD5 checksum value of the downloaded image file by entering:  

```
md5sum NW65SP8_OVL_DVD.iso
```
  - 6d Compare the displayed value against the value listed on the evaluation download page.  
If the values don't match, you must download the file again until you get a matching checksum.
  - 6e Close the terminal by entering `exit`.
  - 6f You can also close the browser and the download dialog box.
- 7 Continue with [Creating a Virtual Machine and Installing NetWare](#).

## 2.3.3 Creating a Virtual Machine and Installing NetWare

- 1 On the desktop, click *Computer > YaST*.
- 2 Select *Virtualization > Virtual Machine Manager*.  
Notice that one virtual machine, *Domain-0* (the OES 2 virtual machine host server) is already running.
- 3 Use the information in the following table to create a second virtual machine and start the NetWare installation.

Page Name	Action
Virtual Machine Manager	1. In the list of virtual machines, select the <i>localhost</i> entry. 2. Click <i>New</i> . The Create a Virtual Machine Wizard launches.
Create a Virtual Machine	1. Click <i>Forward</i> .
Install an Operating System?	1. Click <i>Forward</i> .

Page Name	Action
Type of Operating System	<ol style="list-style-type: none"> <li>1. Click the expand icon next to <i>NetWare</i>, then select <i>Novell Open Enterprise Server 2 (NetWare)</i>.</li> <li>2. Click <i>Forward</i>.</li> </ol>
Summary	<ol style="list-style-type: none"> <li>1. Click <i>Name of Virtual Machine</i>.</li> </ol>
Name of Virtual Machine	<ol style="list-style-type: none"> <li>1. In the <i>Name</i> field, type <code>LAB_NW_VM</code>. It is easier to know which VM you are managing if it reflects the name of the server it contains.</li> <li>2. Click <i>Apply</i>.</li> </ol>
Summary	<ol style="list-style-type: none"> <li>1. Click <i>Hardware</i>.</li> </ol>
Hardware	<ol style="list-style-type: none"> <li>1. If your server has more than 1 GB memory installed, increase the initial memory allocated to the VM by clicking the arrows.  For example, if your server has 2 GB memory installed, you can easily increase the initial memory amount to 1024 MB.</li> <li>2. Click <i>Apply</i>.</li> </ol>
Summary	<ol style="list-style-type: none"> <li>1. Click <i>Disks</i>.</li> </ol>

Page Name	Action
Disks	<p>Initially, a 10 GB file is specified for the partitions/volumes on the virtual server. By default, this is a sparse file, meaning that although 10 GB is allocated, the size of the file on the disk will only be as large as the actual data it contains. Sparse files conserve disk space, but they have a negative impact on performance.</p> <p>The NetWare install allocates 500 MB for a DOS partition and 8 GB for the SYS: volume. The default disk size of 10 GB leaves about 1.5 GB for other partitions, which isn't very much, although it is sufficient for the exercises in this guide.</p> <p>However, you allocated 25 GB for the /vm mount point on the server, so let's allocate all of that to this virtual machine.</p> <ol style="list-style-type: none"> <li>1. With the default <i>Hard Disk</i> selected, click <i>Edit</i>.</li> <li>2. Modify the path in the <i>Server</i> field to be  <code>file:/vm/LAB_NW_VM/disk0</code>  This creates the virtual machine files on the Ext2 /vm partition you created during the installation.</li> <li>3. In the <i>Size</i> field, replace 10.0 with 25.</li> <li>4. Deselect <i>Create Sparse Image File</i>.  This dedicates 25 GB of physical disk space on the file system to the VM file and improves performance of the Virtual NetWare server.</li> <li>5. Click <i>OK</i>.</li> <li>6. Click <i>CD-ROM</i>.</li> <li>7. Click <i>Browse</i>, then navigate to and select the <code>NW65SP8_OVL_DVD.iso</code> file you downloaded to the desktop.</li> <li>8. Click <i>Open</i>.</li> <li>9. Click <i>OK</i>.</li> <li>10. Click <i>Apply</i>.</li> </ol>
Summary	<ol style="list-style-type: none"> <li>1. Click <i>OK</i>.  The virtual machine is created and the NetWare installation starts.  This can take a few minutes or longer, depending on processor speed, memory, etc. Most of the time is required to prepare the 25 GB VM file. However, after the file is prepared, the VM will run much more efficiently than if it were using a sparse file.</li> </ol>
<p>4 After the NetWare installation starts, use the following table to navigate the pages listed in the left column:</p> <p><b>IMPORTANT:</b> Some of the instructions that follow assume you have a mouse attached to the server. If not, as you install, use the Tab key to select the options indicated, then press Enter to continue.</p>	

Page Name	Action
NetWare Installation	<ol style="list-style-type: none"> <li>1. Click inside the installation window to set the mouse pointer. The mouse is not used on the first few screens, but you must set it now. Otherwise, the mouse and the keyboard might not work as expected when the GUI pages appear.</li> <li>2. Use the arrow keys to select a language, then press Enter.</li> <li>3. Modify the Regional Settings if desired, then select <i>Continue</i> and press Enter.</li> <li>4. Press F10 twice to accept the license agreements.</li> <li>5. Press the Down-arrow key to select <i>Continue</i>, then press Enter.</li> <li>6. Press Enter to <ul style="list-style-type: none"> <li>♦ Create an 8 GB SYS: volume.</li> <li>♦ Begin copying files for the installation.</li> </ul> <p>As the files copy, notice the <i>Run</i>, <i>Pause</i>, and <i>Shutdown</i> options above the window displaying the installation. After the server is installed, they are activated, and you can then use them to manage the state of the virtual machine.</p> </li> </ol>
Choose a Pattern	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>. At the start of the installation you set the mouse pointer inside the window boundary. To free the mouse to move outside the window, press Ctrl+Alt. To start working in the window again, click inside it to set the pointer.</li> </ol>
Components	<ol style="list-style-type: none"> <li>1. Select <ul style="list-style-type: none"> <li>♦ <i>Apache 2 Web Server and Tomcat 4 Servlet Container</i></li> <li>♦ <i>Tomcat 5 Servlet Container</i></li> <li>♦ <i>Novell iManager 2.7.2</i></li> </ul> </li> <li>2. Click <i>Next</i>.</li> </ol>
Novell iManager 2.7.2	<ol style="list-style-type: none"> <li>1. Click <i>Yes</i>.</li> </ol>
Summary	<ol style="list-style-type: none"> <li>1. Click <i>Copy Files</i>.</li> </ol>
Server Properties	<ol style="list-style-type: none"> <li>1. Type <code>LAB_NW</code> for the server name.</li> <li>2. Click <i>Next</i>.</li> </ol>
Protocols	<ol style="list-style-type: none"> <li>1. Click <i>IP</i>. The installation process accesses the server.</li> <li>2. Click the first <i>IP Address</i> field, then type the IP address of the server. For example, 192.168.1.130.</li> <li>3. Type the subnet mask for the address. For example, 255.255.255.0.</li> <li>4. Type the router (gateway) address for the subnet. For example, 192.168.1.1.</li> <li>5. Click <i>Advanced</i>.</li> </ol>

Page Name	Action
Advanced	<ol style="list-style-type: none"> <li>1. Click the <i>SLP</i> tab.</li> <li>2. In the <i>DA Server 1</i> field, type the IP address of the SLP Directory Agent (DA), which is the first OES 2 server you installed in the lab. For example, 192.168.1.100.</li> <li>3. In the <i>SLP Scope List</i> field, type <i>Directory</i>.</li> <li>4. Click <i>OK</i>.</li> </ol>
Protocols	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol>
Domain Name Service	<ol style="list-style-type: none"> <li>1. Type the DNS hostname associated with the IP address you just entered.  In contrast to OES 2 servers, this can be different than the name used in eDirectory. Of course, you can choose to use the DNS name for NetWare servers in eDirectory in your production network. In this guide, however, the eDirectory server name is assumed to be LAB_NW.</li> <li>2. Type the domain name.</li> <li>3. Type at least one DNS name server IP address. For example, 192.168.1.50.</li> <li>4. Click <i>Next</i></li> </ol>
Time Zone	<ol style="list-style-type: none"> <li>1. Click the correct time zone for your area.</li> <li>2. Click <i>Advanced</i>.</li> </ol>

MLA License Certificate Context	<ol style="list-style-type: none"> <li>1. Change the <i>NDS Context</i> for the license file to <i>O=COMPANY</i>. This makes this license available to any additional NetWare 6.5 servers you might choose to install in a different context in the tree, including any physical NetWare servers you install.</li> <li>2. Click <i>Next</i>.</li> </ol>
Novell Modular Authentication Service	<ol style="list-style-type: none"> <li>1. Click <i>Next</i>.</li> </ol> <p>It takes a few minutes for the installation to configure your OES 2 services. If you want to learn more about various OES 2 services (most of which we have not installed), you can read the information pages as the configuration process runs.</p> <p>You can install more services later if you want to experiment further.</p>
Reset Your Server Now?	<ol style="list-style-type: none"> <li>1. Click <i>Yes</i>.</li> </ol>

- 5 Close the Virtual Machine Manager windows by clicking the X on the upper right corner, or by right-clicking the title bar and selecting *Close*. The NetWare server continues to run.

---

**IMPORTANT:** It is wise to keep Virtual Machine Manager open only while you are actively using it to manage the virtual machines on your host server. Otherwise, the manager incrementally consumes domain 0 memory and eventually causes out-of-memory errors. For more information, see “[Virtual Machine Manager \(http://www.novell.com/documentation/sles10/xen\\_admin/data/sec\\_xen\\_virtualization\\_vmanager.html\)](http://www.novell.com/documentation/sles10/xen_admin/data/sec_xen_virtualization_vmanager.html)” in the *Virtualization with Xen Guide* ([http://www.novell.com/documentation/sles10/xen\\_admin/data/bookinfo.html](http://www.novell.com/documentation/sles10/xen_admin/data/bookinfo.html)) guide.

# eDirectory, Users and Groups, and Identity Services

# 3

Novell® eDirectory™ is the central, key component of Novell Open Enterprise Server (OES). It provides the following:

- ♦ Centralized identity management
- ♦ The underlying infrastructure for managing your network servers and the services they provide
- ♦ Secure access to network services both within the firewall and from the Web

The installation steps presented in this guide thus far have created a new eDirectory tree named EXAMPLE\_TREE that you are using to learn about OES 2. As you work with the tree and the objects it contains, you will begin to better understand the role eDirectory plays.

This section discusses the following:

- ♦ [Section 3.1, “Using the eDirectory Information in This Guide,” on page 45](#)
- ♦ [Section 3.2, “An Introduction to eDirectory Planning,” on page 46](#)
- ♦ [Section 3.3, “Setting Up Role-Based Services,” on page 49](#)
- ♦ [Section 3.4, “Updating the iManager Plug-in Modules,” on page 49](#)
- ♦ [Section 3.5, “Creating a Context for Your Users and Groups,” on page 50](#)
- ♦ [Section 3.6, “Setting Up Universal Password for Users,” on page 50](#)
- ♦ [Section 3.7, “Creating NCP and NSS Volumes for Home Directories,” on page 52](#)
- ♦ [Section 3.8, “Creating Users,” on page 55](#)
- ♦ [Section 3.9, “A Note about Identity Manager 3.6 Bundle Edition,” on page 58](#)

## 3.1 Using the eDirectory Information in This Guide

Before you install OES 2 in a production environment, it is critical that you and your organization take time to plan and design your tree.

However, the instructions in this guide require no planning on your part. In fact, most of the eDirectory objects needed for the exercises in this guide were created in [Chapter 1, “Installing the OES 2 SP2 Server in Your Lab,” on page 11](#).

The information that follows introduces eDirectory.

If you are already familiar with eDirectory and want to skip the planning introduction, we recommend that you do the following:

1. View the eDirectory tree structure used in this guide ([Figure 3-1 on page 46](#)).
2. Skip to [Section 3.5, “Creating a Context for Your Users and Groups,” on page 50](#).

## 3.2 An Introduction to eDirectory Planning

If you want an efficient and intuitive eDirectory design, you and your organization need to base it on two things:

- ♦ The layout of your network
- ♦ The structure of your organization

You and your team should carefully think through the issues and design considerations discussed in “[Designing Your Novell eDirectory Network](#)” in the *Novell eDirectory 8.8 Administration Guide*.

- ♦ [Section 3.2.1, “Your Lab’s eDirectory Tree,”](#) on page 46
- ♦ [Section 3.2.2, “Your Current Lab Tree,”](#) on page 47
- ♦ [Section 3.2.3, “Expanding Your Lab Tree,”](#) on page 48

### 3.2.1 Your Lab’s eDirectory Tree

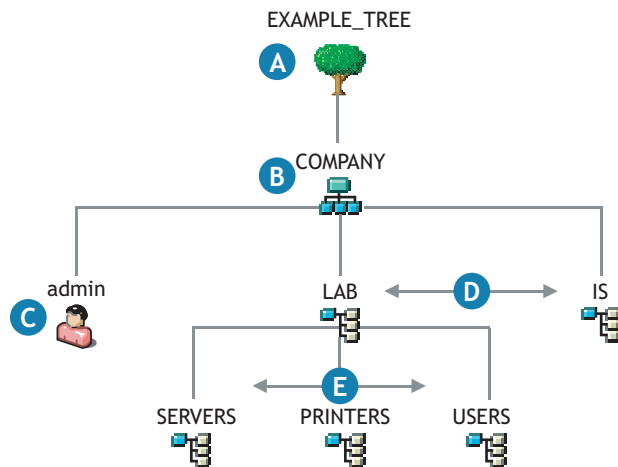

**Figure 3-1** illustrates an eDirectory tree like the one you will use in the lab exercises found in this guide. It also illustrates and explains the basic elements you should consider when designing an eDirectory tree.

---

**NOTE:** The IS Organizational Unit object is included for explanatory purposes and is not created in this guide.

---

**Figure 3-1** Your Lab’s eDirectory Tree

Reference Letter	Explanation
------------------	-------------

- |          |   |
|----------|---|
| <b>A</b> | The Tree object is the top container object in the tree. It usually contains an Organization object (specified in the install by using o=company) that represents your company or organization. |
|----------|---|

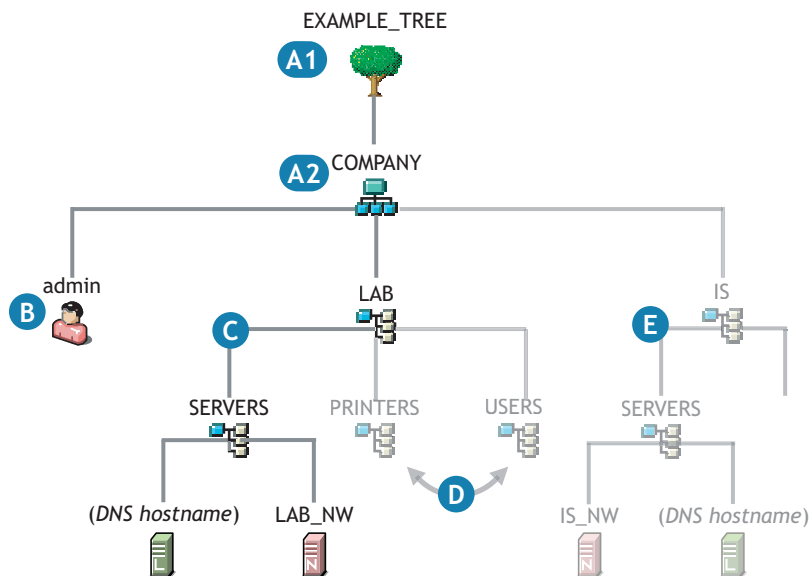

## Reference Letter Explanation

- B** The Organization object is normally the first (and often the only) container object under the Tree object. It is typically named after your organization.  
  
Small organizations keep object management simple by having all other objects, such as users, printers, and servers, directly under the Organization object.  
  
Organizations that are large enough to have departments or other organizational units usually decide to have their tree structure reflect their organizational structure.  
  
As shown in this lab example, these organizations create Organizational Unit objects (specified during the install by using ou=name) that reflect their departments, divisions, geographical locations, etc., as is logical for their organization.  
  
Sometimes large organizations create multiple Organization objects below the Tree object to represent separate business units or subsidiaries.
- C** Every tree requires an Admin User object. You will log in as Admin to create or import other User objects and to create the rest of your tree structure.
- D** This example shows two Organizational Unit objects at the department level (LAB and IS).
- E** This example also illustrates how Organizational Unit objects can be nested to provide a complex hierarchy if it is necessary to manage the organization.

## 3.2.2 Your Current Lab Tree

The eDirectory tree you have created by installing OES 2 in your lab is illustrated by the darker objects in [Figure 3-2](#). The objects that are dimmed are for explanatory purposes and do not exist in your current tree. When you finish with this guide, the upper level organization of your tree will look more like [Figure 3-1](#), except that the IS Organizational Unit shown in that illustration will not be created.

**Figure 3-2** Your Current Lab Tree

Reference Letter	Explanation
------------------	-------------

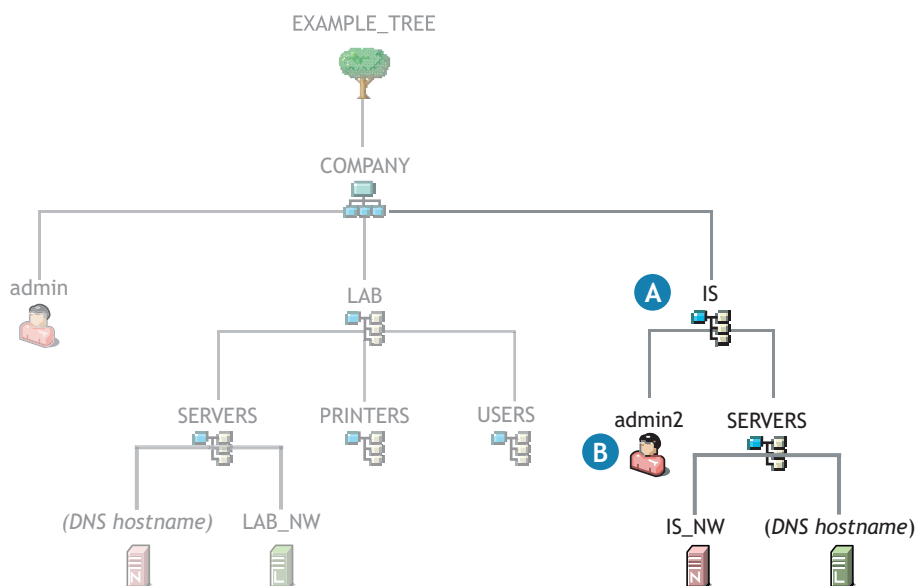

- |          |  |
|----------|--|
| <b>A</b> | The OES installation process requires that you specify names for the following objects: <ul style="list-style-type: none"> <li>♦ <b>A1:</b> A Tree object</li> <li>♦ <b>A2:</b> An Organization object</li> </ul>          |
| <b>B</b> | One of the first objects you specify during an initial installation is the Admin user.   |
| <b>C</b> | The OES installation process can also create Organizational Unit (OU) objects to define a context for the OES 2 Server object.   |
| <b>D</b> | All other OU objects that you have planned for your tree must be created after the installation finishes. For example, you will create the PRINTERS and USERS OU objects later in this guide.                              |
| <b>E</b> | The exception to D is that subsequent installations can create additional contexts to contain other OES servers that you install into the tree. For example, you could create a SERVERS OU under the IS OU as illustrated. |

### 3.2.3 Expanding Your Lab Tree

The instructions in this guide cover only the installation of an OES 2 and a virtualized NetWare® 6.5 SP8 server in the tree.

If you were to decide to install additional servers in the tree, the processes you would follow could involve some additional planning tasks, as illustrated in [Figure 3-3](#).

**Figure 3-3** An Expanded Tree

Reference Letter	Explanation
------------------	-------------

- |          |  |
|----------|--|
| <b>A</b> | During subsequent installations into the same tree, you can create new Organizational Unit objects to provide a context for other OES 2 servers being installed.   |
| <b>B</b> | If you want to specify other Admin users in the OES 2 installation parameters, you can do this during the installation. Note, however, that such an Admin would probably not be granted rights to the entire tree, only to the objects under the IS OU. Admin objects like this are often referred to as sub-container admins. |

## 3.3 Setting Up Role-Based Services

When iManager is installed in connection with OES 2, the administrative tasks available through the *Roles and Tasks* icon are available to all users until you run the configuration wizard. In this exercise, you create a Role-Based Services (RBS) collection that contains all of the management roles in the tree.

When the installation process finishes as outlined below, the eDirectory Admin user is the only user configured to perform the administrative tasks available through the Roles and Tasks icon. If you want to create other administrative users and assign them a subset of administrative roles, you need to create additional collections with subsets of roles and assign the other administrative users to them. For more information, see “[Configuring and Customizing iManager](#)” in the *Novell iManager 2.7.3 Administration Guide*.

- 1 At your Windows workstation, log in to iManager on the OES 2 lab server, using the eDirectory Admin user account and password. For more information, see the steps in [Section 1.9, “Accessing iManager,”](#) on page 24.

If you receive a Tomcat error, see [Section A.2, “iManager Tomcat Error,”](#) on page 109.

- 2 Click the *Configure* icon .
- 3 Select *Role Based Services > RBS Configuration*.
- 4 Click *iManager 2.x collections > New > Collection and Setup*.
- 5 If you are prompted to extend the schema, click *Next*.
- 6 In the *Name* field, type the following:  
Tree Admin Role
- 7 Click the *Browse* icon  next to the *Container* field.
- 8 Click *COMPANY*, then click *Next*.
- 9 Click the *Browse* icon  next to the *Scope* field.
- 10 Click *EXAMPLE\_TREE*.
- 11 Click *Start*.
- 12 Do not close iManager. After the operation finishes, continue with the next section, [Updating the iManager Plug-in Modules](#).

## 3.4 Updating the iManager Plug-in Modules

- 1 In the *Configure* pane, click *Plug-in Installation > Available Novell Plug-in Modules*.

A list shows the plug-ins on novell.com that have been updated or created since OES 2 was initially released.

- 2 Click the check box in the header row.

All of the available plug-in modules are selected.

- 3 Click *Install*.

- 4 Agree to the license agreement and click *OK*.

- 5 When all plug-ins are installed, click *Close*.

- 6 Do not close iManager. Continue with the next section, [Creating a Context for Your Users and Groups](#).

## 3.5 Creating a Context for Your Users and Groups

All OES 2 services require that you create User objects to represent the users on your system. The Linux User Management component for OES 2 servers requires that you also create a Group object that you can assign the users to.

If you reviewed [Section 3.2, “An Introduction to eDirectory Planning,”](#) on page 46, you might have noticed an Organizational Unit object named USERS in [Figure 3-2](#) and [Figure 3-3](#). It is helpful to have at least one Organization Unit object to contain user-related objects, such as User objects and Group objects.

To create an Organizational Unit container object named USERS in the LAB Organizational Unit object:

- 1 In iManager, click the *View Objects* icon .
- 2 In the left pane, click the *Browse* tab.
- 3 Click the down-arrow  next to the *COMPANY* Organization object .
- 4 Click *LAB*, then select *Create Object* from the drop-down list.
- 5 From the *Available Object Classes* list, select *Organizational Unit*, then click *OK*.
- 6 In the *Organizational Unit name* field, type *USERS*.
- 7 Click *OK > OK*.
- 8 Do not close iManager. Continue with the next section, [Setting Up Universal Password for Users](#).

## 3.6 Setting Up Universal Password for Users

On networks where administrators plan to provide native Windows (CIFS) and native Macintosh (AFP) access to file services on an OES 2 server, Universal Password policies must be assigned to eDirectory users needing such access.

When you install Novell AFP and Novell CIFS, the OES installation creates Universal Password policies for each of these services, named AFP Default Policy and CIFS Default Policy, respectively.

eDirectory allows one Universal Password policy assignment per container. This means that if all of your users reside in the same container, their passwords can be governed by either the AFP or the CIFS policy, but not both.

Many organizations prefer to manage their users in a single container like the USERS container you just created, and they need one Universal Password policy that supports all of the services their users need.

### 3.6.1 Creating a Universal Password Policy to Support Both AFP and CIFS

The AFP and CIFS default policies are almost identical, except that the AFP and CIFS proxy users are allowed to retrieve passwords only in their respective policies.

You will now create a single password policy named File Services Policy that is based on the AFP policy, and you'll grant the CIFS proxy user the ability to retrieve passwords along with the AFP proxy user.

---

**NOTE:** Larger organizations often prefer to limit the number of proxy users to either a single user or to one per service type, but that discussion is outside the scope of this document. For more information, see “[Understanding Proxy Users](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

---

- 1 In iManager, click the up-arrow , click the down-arrow  next to *Security*, then click the  next to *Password Policies*.
- 2 Click *AFP Default Policy*, then in the pop-up list click *Copy Object*.
- 3 In the *Object Name* field, type `File Services Policy`, then click the *Browse* icon  next to the *Object Location* field.
- 4 Click the down-arrow  next to *Security*, then click *Password Policies*.
- 5 Click *OK* > *OK*.
- 6 Click the *Roles and Tasks* icon .
- 7 Click *Passwords* > *Password Policies*.
- 8 Click *File Services Policy*.
- 9 In the Password Policies pop-up window, click the *Universal Password* tab, then click the *Configuration Options* sub-tab.
- 10 Scroll down to the *Universal Password Retrieval* section.
- 11 Under *Allow the Following to Retrieve Passwords*, click *Insert*.
- 12 In the Object Selector, browse to the *COMPANY* > *LAB* > *SERVERS* container, click the *cifsProxyUser - server\_name* object, then click *OK* > *OK* > *Close*.
- 13 Do not close iManager. Continue with the next section, [Assigning the Universal Password Policy to the USERS Container](#).

### 3.6.2 Assigning the Universal Password Policy to the USERS Container

For the users you create to be assigned the File Services Policy password policy, you must associate the policy with the USERS container created in [Section 3.5, “Creating a Context for Your Users and Groups,”](#) on page 50.

- 1 In iManager, click the *Roles and Tasks* icon .

- 2 Click *Passwords > Password Policies*.
- 3 Click the *File Services Policy* link.
- 4 Click the *Policy Assignment* tab.
- 5 Click the *Browse* icon  next to the *Assign To* field.
- 6 In the *Contents* pane, browse to the *LAB* Organizational Unit.
- 7 Select the *USERS* Organizational Unit object, then click *OK*.
- 8 Click *Apply > OK*.
- 9 Do not close iManager. Continue with the next section, [Creating NCP and NSS Volumes for Home Directories](#).

## 3.7 Creating NCP and NSS Volumes for Home Directories

For the exercises in the guide, you need home directories for the users you create.

When you create NCP™ and NSS volumes before creating users, you can then create home directories at the same time as you create the user objects. For that reason, it makes sense to set up the volumes prior to user object creation.

- ♦ [Section 3.7.1, “Home Directories on OES 2,” on page 52](#)
- ♦ [Section 3.7.2, “Home Directories on NetWare 6.5,” on page 54](#)
- ♦ [Section 3.7.3, “Summary of Lab Home Directories and Purposes,” on page 55](#)

### 3.7.1 Home Directories on OES 2

On OES 2, home and other data directories can reside in three possible volume types, each of which is presented in this guide. The locations are:

- ♦ **Linux POSIX volumes:** Your OES 2 lab server already contains a / (root) partition with an empty /home directory (the default location for home directories on Linux servers).
- ♦ **NCP volumes that point to Linux POSIX volumes:** Your OES 2 server has NCP Server installed so you can create NCP volumes that point to the Linux POSIX\* file systems.
- ♦ **Novell Storage Services (NSS) volumes:** Your OES 2 server is prepared with EVMS to support NSS volumes. (NSS is the native file system on NetWare.)

There are important differences between the home directories in each of these locations and in the configuration steps required to create them and set the needed file/directory trustee assignments, etc.

- ♦ [“The Linux POSIX /home Directory” on page 52](#)
- ♦ [“Creating an NCP Volume on the OES 2 Server” on page 53](#)
- ♦ [“Creating an NSS Pool and Volume on the OES 2 Server” on page 53](#)

#### The Linux POSIX /home Directory

For the exercises in this guide, you create POSIX home directories for two users. This lets you easily see the differences between directories created through POSIX and directories created through NCP. Both directory types exist on the same physical disk space and are displayed as POSIX home directories, but only the NCP directories appear in NCP interfaces.

## Creating an NCP Volume on the OES 2 Server

OES 2 lets you create NCP volumes that point to directories on the Linux POSIX partitions of your server. For the exercises in this guide, you create an NCP volume that points to the `/home` directory on your server. NCP volumes support the Novell File and Directory Trustee Rights model when files are accessed through an NCP client.

NCP volumes on Linux POSIX file systems differ from NSS volumes; NCP volumes do not support NSS file attributes, such as Delete Inhibit. For more information, see “[Directory and File Attributes](#)” in the *OES 2 SP2: NCP Server for Linux Administration Guide*.

- 1 Log into your server as `root` and click *Computer > Gnome Terminal*.
- 2 Create an NCP volume in NCPCON that points to the `/home` directory by entering the following commands:

```
ncpcon create volume home_ncp /home
exit
```

## Creating an NSS Pool and Volume on the OES 2 Server

OES 2 supports NSS volumes. NSS is a fast-mounting, journaled file system for OES 2 and NetWare. It is the only file system in the industry that is integrated with identity management. NSS volumes support the Novell File and Directory Trustee Rights model and also NSS file attributes. For more information, see “[The Traditional Novell Access Control Model](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

NSS volumes can span partitions and even hard disks. For a graphical overview of NSS volumes, see [Section A.1, “NSS Partitions, Pools, and Volumes,”](#) on page 107.

- 1 On your lab workstation in iManager, click the *Roles and Tasks* icon .
- 2 Click *Storage > Pools*.
- 3 Click the *Browse* icon  next to the *Server* field,
- 4 Browse to and select your OES 2 lab server object (in *COMPANY > LAB > SERVERS*).
- 5 Click *New*.
- 6 Name the pool `pool_lx` and click *Next*.
- 7 Click the box next to the system disk in your server (`sda`, `hda`, etc.).
- 8 By default, all of the free space on the disk should be automatically entered in the *Used Size* field, and the amount should match the *Free Size (MB)* displayed to the right of the system disk. If the *Used Size* field is blank, type the free space amount.
- 9 Click *Finish*.  
  
POOL\_LX is listed as an available pool. Notice that the NSS pool name is uppercase, even though you typed lowercase. All NCP and NSS volumes, are created and displayed in uppercase to give a visual distinction from the Linux POSIX lowercase norm, to prevent visual confusion of letters and numbers (`vol1` vs. `VOL1`), and because names are case insensitive on NSS.
- 10 After the pool appears in the list, continue in the *Storage* task by clicking *Volumes*.
- 11 Click *New*.
- 12 In the *Name* field, type `home_nss`, then click *Next*.
- 13 Click the box next to *POOL\_LX*, then click *Next*.

- 14 Scroll down to *File Information > Lookup Namespace*

*Long* should be selected by default.

This setting avoids having the NCP server spend cycles doing Long namespace lookups.

- 15 Click *Finish*.

*HOME\_NSS* is listed as an available volume.

- 16 Continue with the next section, [Home Directories on NetWare 6.5](#).

## 3.7.2 Home Directories on NetWare 6.5

The default file system for NetWare 6.5 is NSS, which is an NCP volume by definition.

NetWare servers don't contain a HOME volume (partition) by default, but it is standard practice among NetWare administrators to create a HOME volume for their network users' private directories.

### Creating a HOME\_NW Volume on the NetWare 6.5 SP8 Server

Your NetWare virtual machine has approximately 16.5 GB of disk space still available for another NSS pool and volume on disk 0, which is the 25 GB file you created for the VM in [Section 2.3.3, "Creating a Virtual Machine and Installing NetWare,"](#) on page 37.

- 1 In iManager, click the *Roles and Tasks* icon .

You can manage storage on the NetWare LAB\_NW\_VM server even though you are running iManager on your OES 2 lab server. This demonstrates one advantage of the tight integration of OES 2 services with eDirectory.

- 2 Click *Storage > Pools*.

- 3 Click the *Browse* icon  next to the *Server* field,

- 4 Browse to and select the LAB\_NW\_VM server object (in *COMPANY > LAB > SERVERS*).

Notice that a pool named *SYS* already exists. This pool contains the default volumes and files created with the NetWare server, including a volume that is also named *SYS*.

- 5 Click *New*.

- 6 Name the pool `pool_nw` and click *Next*.

- 7 Click the box next to the XenHD device in your virtual machine.

This "device" is the 25 GB file that you created for the virtual machine. The file currently contains all the virtualized NetWare server's partitions and files.

- 8 By default, all of the free space on the disk should be automatically entered in the *Used Size* field, and the amount should match the *Free Size (MB)* displayed to the right of the system disk. If the *Used Size* field is blank, type in the free space amount.

- 9 Click *Finish*.

POOL\_NW is listed as an available pool.

- 10 In the left frame, click *Volumes*.

- 11 Click *New*.

- 12 In the *Name* field, type `home_nw`, then click *Next*.

13 Click the box next to *POOL\_NW*, then click *Next*.

14 Click *Finish*.

### 3.7.3 Summary of Lab Home Directories and Purposes

Your lab servers now have four *home* directory access points in three physical locations (the first two share the same physical partition):

- ♦ **/home:** This is the default home directory on SLES 10 servers. The underlying file system is Reiser. On SLES 10 servers, home directories are normally created on */home* by users logging in to the server for the first time.

Home directories on OES 2 servers are normally created on NCP or NSS volumes. However, they can be created manually on */home*. User and Group ownership must be manually adjusted because the directories belong initially to the *root* user that creates them.

- ♦ **HOME\_NCP:** This is an NCP volume mount point that points to and shares disk space with the */home* directory mentioned above. In this guide, it illustrates the functionality of the NCP server, the Novell File and Directory Trustee Model, and Novell Client™ access to a Linux POSIX volume. (The underlying file system is Reiser.) Home directories on NCP volumes are easily created when users are created in iManager. POSIX permissions to home directories created in iManager must be adjusted before users can access the directories through non-NCP applications. This is because when the directories are created, the directory owner in POSIX is initially the eDirectory Admin User who created the users in eDirectory and their home directories on the Linux file system (NCP volume).
- ♦ **HOME\_NSS:** This is an NSS volume on the OES 2 server. It illustrates the functionality of the NCP server, the Novell File and Directory Trustee Model, and NSS file attributes. Because NSS volumes are also NCP volumes by default, home directories are easily created at user-creation time in iManager. POSIX permissions do not apply to NSS volumes. However, NSS can interface with POSIX permissions for applications and access methods that require them. Trustee assignments (ownership) are automatically assigned to the eDirectory username or user when the home directory is created.
- ♦ **HOME\_NW:** This is an NSS volume on your virtualized NetWare server. It illustrates the functionality of the NCP server, the Novell File and Directory Trustee Model, and NSS file attributes on a NetWare server. Trustee assignments (ownership) are automatically assigned to the eDirectory username or user when the home directory is created.

## 3.8 Creating Users

For the lab exercises, you need to create the users shown in [Table 3-1](#).

---

**IMPORTANT:** There are seven users, each representing a different user type you might need on your network.

Although the user names are unusual, they should help you track home directory locations and service access at a glance.

Each name includes “edir” to indicate that eDirectory users have access to the traditional Novell services highlighted in this guide:

- ♦ Novell AFP (Macintosh networking)
- ♦ Novell CIFS (Windows networking)

- ♦ Novell iFolder® 3.8
- ♦ NetStorage

The steps for creating users begin after [Table 3-1](#).

**Table 3-1** *Users to Create*

<b>Username</b>	<b>First Name</b>	<b>Last Name</b>	<b>Home Directory Volume</b>	<b>What This User Demonstrates</b>
linux1_lum-edir	Linux1	Lum-edir	/home	<p>You manually create this user's home directory in the server's /home directory.</p> <p>If LUM is configured to allow login or sshd access, this user can access the OES 2 server as though it is a local user.</p>
linux2_lum-edir	Linux2	Lum-edir	/home	<p>You manually create this user's home directory in the server's /home directory.</p> <p>If LUM is configured to allow login or sshd access, this user can access the OES 2 server as though it is a local user.</p> <p>The difference between this user and the linux1 user is that its home directory is not adjusted for privacy but has the default POSIX permissions.</p>
ncp_edir	Ncp	Edir	DNSname_HOME_NCP	<p>This user's home directory is created by specifying the HOME_NCP volume at user-creation time in iManager.</p> <p>When the instructions in this section are complete, the user has access to only the traditional Novell services: AFP, CIFS, iFolder, and NetStorage.</p>
ncp_lum-edir	Ncp	Lum-edir	DNSname_HOME_NCP	<p>This user's home directory is created by specifying the HOME_NCP volume at user-creation time in iManager.</p> <p>When the instructions in this section are complete, the user has potential access to the server as a local user, in addition to traditional Novell service access.</p>

Username	First Name	Last Name	Home Directory Volume	What This User Demonstrates
nss_edir	Nss	Edir	<i>DNSname_HOME_NSS</i>	<p>This user's home directory is created by specifying the HOME_NSS volume at user-creation time in iManager.</p> <p>The user has access to only the traditional Novell services: AFP, CIFS, iFolder, and NetStorage.</p>
nss_lum-edir	Nss	Lum-edir	<i>DNSname_HOME_NSS</i>	<p>This user's home directory is created by specifying the HOME_NSS volume at user-creation time in iManager.</p> <p>In addition to traditional Novell services access, the user has access to the server as a local user.</p>
nw_edir	Nw	Edir	LAB_NW_HOME_NW	<p>This user represents the traditional NetWare user in eDirectory.</p> <p>This user's home directory is created by specifying the HOME_NW (NSS) volume at user-creation time in iManager.</p> <p>The user has access to only the traditional Novell services: AFP, CIFS, iFolder, and NetStorage. However, you could also LUM-enable the user (and the other non-LUM users as well) to verify that full OES 2 services are potentially available to all eDirectory users.</p>

- 1 In iManager, in the left pane, click *Users > Create User*.
- 2 In the *Username* field, type a username from **Table 3-1**.  
For the first user, this is linux1\_lum-edir.
- 3 Type the first name and last name for the user as shown in **Table 3-1**.
- 4 Click the *Browse* icon  next to the *Context* field.
- 5 For the first user, browse to the *USERS* object (*COMPANY > LAB > USERS*), then click the object.  
For subsequent users, click the *Object History* icon  and select the *USERS* object's fully distinguished name (FDN).
- 6 Type the same password in both the *Password* and *Retype Password* fields.
- 7 Do not select *Set Simple Password*.  
This is not required for OES because Universal Password is used.

- 8 If the Home Directory Volume cell in the table shows /home, skip to **Step 9**.  
For the other users, select the *Create Home Directory* option and browse  to the NCP volume indicated. (Volumes are in the SERVERS OU.)  
The home directories for the linux\* users are created later.
- 9 Click *OK*.
- 10 Click *Repeat Task* to repeat the process until the other users listed in **Table 3-1 on page 56** are created.
- 11 Do not close iManager. Continue with the next section, **A Note about Identity Manager 3.6 Bundle Edition**.

## 3.9 A Note about Identity Manager 3.6 Bundle Edition

If your organization has more than one directory service that stores user information, you should consider implementing the Novell Identity Manager 3.6 Bundle Edition included with Novell Open Enterprise Server.

The Identity Manager 3.6 Bundle Edition provides licensed synchronization of information (including passwords) held in NT Domains, Active Directory\* Domains, and eDirectory trees.

Not only can you import User objects into eDirectory rather than creating them as you have in this section, but you can use Identity Manager to keep all the user data (including passwords that are stored in your different databases) synchronized.

When data from one system changes, Identity Manager detects and propagates these changes to other connected systems based on the business policies you define.

For more information, see “**Using the Identity Manager 3.6.1 Bundle Edition**” in the *OES 2 SP2: Planning and Implementation Guide*.

Continue with **Chapter 4, “eDirectory Linux Access (LUM),” on page 59**.

# eDirectory Linux Access (LUM)

# 4

Novell® Linux User Management (LUM) is a key component of Novell Open Enterprise Server (OES) and lets you require users who are accessing PAM-enabled services, such as FTP or SSH, on the OES 2 server to authenticate through eDirectory™.

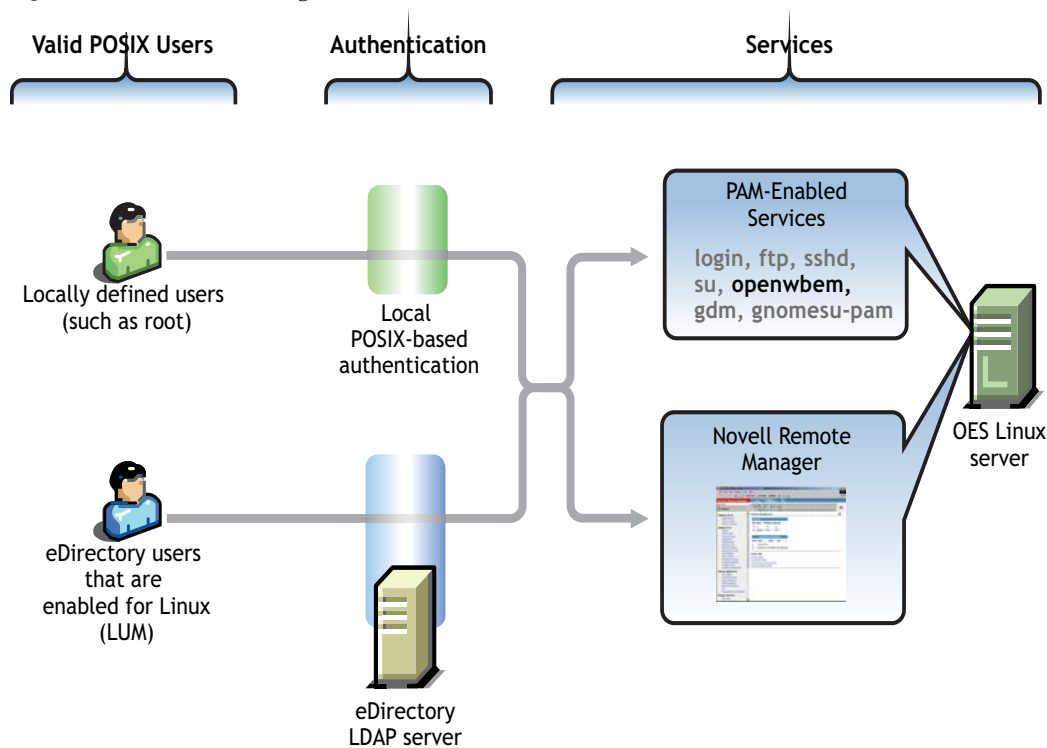

This section discusses the following:

- ♦ [Section 4.1, “Overview of Linux User Management,” on page 59](#)
- ♦ [Section 4.2, “Creating Group Objects,” on page 60](#)
- ♦ [Section 4.3, “Enabling the LUMUsers Group for Linux User Management \(LUM\),” on page 61](#)
- ♦ [Section 4.4, “Allowing SSH Access,” on page 61](#)
- ♦ [Section 4.5, “Creating a Home Directory for the linux\\* Users,” on page 63](#)

## 4.1 Overview of Linux User Management

[Figure 4-1](#) illustrates how LUM works with PAM-enabled services. For more detailed information, see “[Linux User Management: Access to Linux for eDirectory Users](#)” in the *OES 2 SP2: Planning and Implementation Guide*. As illustrated, OpenWBEM is the only PAM-enabled service that is active by default.

**Figure 4-1** Linux User Management on OES

The user-creation steps you completed earlier in this guide ([Section 3.8, “Creating Users,” on page 55](#)) created three LUM users with limited rights as local users on the OES 2 server.

## 4.2 Creating Group Objects

To simplify user management, you should create one or more groups and associate users with those groups. Groups let you manage multiple users at the same time.

Some actions can only be performed at the group level. For example, enabling users for LUM requires making them members of a group that is enabled for LUM.

For the exercises in this guide, you will create two groups:

- ♦ **LUMUsers:** This group is used to LUM-enable some of the users you have created. Having the group lets us explore how LUM works and directly experience the SSH security precautions that are built into OES 2.
- ♦ **AllUsers:** This group is for all of the eDirectory user objects, including those that are LUM-enabled and those that have only traditional Novell services access.

---

**IMPORTANT:** Creating a group named users seems logical to many eDirectory administrators.

Unfortunately, all SLES 10 servers already have a system-created local group named users, and creating a duplicate group in eDirectory causes problems.

For more information, see “[Avoiding POSIX and eDirectory Duplications](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

---

To create the required group objects:

- 1 In iManager > *Roles and Tasks*, click *Groups > Create Group*.
- 2 In the *Group Name* field, type `LUMUsers`.  
The name contains uppercase and lowercase letters simply to illustrate that case is preserved in object names. Some administrators use mixed case to improve readability.
- 3 Click the *Browse*  icon next to the *Context* field.
- 4 Browse to the `USERS` container object.
- 5 Click *OK > Modify*.
- 6 Click the *Members* tab.
- 7 Click the *Browse* icon  next to the *Members* field.
- 8 Browse to the `USERS` group and click the down-arrow  next to the group.
- 9 Select the following User objects:
  - ♦ `linux1_lum-edir`
  - ♦ `linux2_lum-edir`
  - ♦ `ncp_lum-edir`
  - ♦ `nss_lum-edir`
- 10 Click *OK > Apply > OK*.
- 11 Click *Create Group*.
- 12 In the *Group Name* field, type `AllUsers`.
- 13 Click the *Object History* icon  and select the `USERS` object’s fully distinguished name (FDN).

- 14 Click *OK > Modify*.
- 15 Click the *Members* tab.
- 16 Click the *Browse* icon  next to the *Members* field.
- 17 Shift-click *linuxl\_lum-edir*, drag the mouse down to select all the users, then click *nw\_edir*.  
All of the users are added to the list.
- 18 Click *OK > Apply > OK*.
- 19 Do not close iManager. Continue with the next section, [Enabling the LUMUsers Group for Linux User Management \(LUM\)](#).

## 4.3 Enabling the LUMUsers Group for Linux User Management (LUM)

---

**IMPORTANT:** LUM-enabling users is an important part of these lab exercises. However, in a production environment you should avoid LUM-enabling users until you fully understand the potential security issues. For more information, see “[SSH Services on OES 2](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

---

If you want eDirectory users to access PAM-enabled services such as login or sshd (SSH), on an OES 2 server, you must LUM-enable the users.

- 1 In the *Roles and Tasks* list, click *Linux User Management > Enable Groups for Linux*.
- 2 Click the *Browse* icon  next to the *Group Name* field.
- 3 Click *LUMUsers > OK*.
- 4 Make sure the *Linux-Enable All Users in These Groups* option is selected, then click *Next* twice.
- 5 Click the *Browse* icon  next to the *Linux Workstation Name* field.
- 6 Click the up-arrow .
- 7 Click the down-arrow  next to *SERVERS*.
- 8 Click the *UNIX Workstation* object for the OES 2 lab server, then click *OK*.  
LUM-enabled access to OES 2 servers is enabled on an individual server basis. If you install additional OES 2 servers that require LUM access, they must also be added to a LUM-enabled group.  
The LUMUsers group and its users are now recognized by the OES 2 server as local users.
- 9 Click *Next > Finish > OK*.
- 10 Do not close iManager. Continue with the next section, [Allowing SSH Access](#).

## 4.4 Allowing SSH Access

To illustrate how LUM-enabled services work, we will briefly experiment with SSH access for eDirectory LUM-enabled users. In [Section 10.2.4, “SSH and NetStorage Administration,” on page 88](#), you will see that SSH access is required for a key NetStorage administration feature.

Complete the steps in the following sections:

- ♦ [Section 4.4.1, “Allowing SSH Access Through the Firewall,” on page 62](#)

- ♦ [Section 4.4.2, “Adding SSH as an Allowed Service in LUM,” on page 62](#)
- ♦ [Section 4.4.3, “Verifying SSH Access,” on page 62](#)

### 4.4.1 Allowing SSH Access Through the Firewall

- 1 On the OES 2 lab server, click *Computer > YaST Administrator Settings*, then click *Security and Users > Firewall*.
- 2 In the left navigation frame, click *Allowed Services*.
- 3 In the *Services to Allow* drop-down list, select *SSH*.
- 4 Click *Add > Next > Accept*.

The firewall is now configured to allow SSH connections with the server.

- 5 Continue with [Adding SSH as an Allowed Service in LUM](#).

### 4.4.2 Adding SSH as an Allowed Service in LUM

- 1 In YaST in the *Open Enterprise Server* group, click *OES Install and Configuration*.
- 2 Click *Accept*.
- 3 When the Novell Open Enterprise Server Configuration page has loaded, click the *Disabled* link under *Linux User Management*.

The option changes to *Enabled* and the configuration settings appear.

- 4 Click *Linux User Management*.
- 5 Type the eDirectory Admin password in the appropriate field, then click *OK > Next*.
- 6 In the list of allowed services, click *sshd*.
- 7 Click *Next > Next > Finish*, then close YaST.
- 8 Continue with [Verifying SSH Access](#).

### 4.4.3 Verifying SSH Access

The LUMUsers group in eDirectory now has SSH as an allowed service. To verify this:

- 1 On the lab workstation, in the iManager *Roles and Tasks* list, click *Directory Administration > Modify Object*.
- 2 Click the *Browse* icon  next to the *Object Name* field.
- 3 Browse to and select the *LUMUsers* group object (in *COMPANY > LAB > USERS*), then click *OK*.
- 4 Click the *Linux Profile* tab, then click the *Linux Services* sub-tab.
- 5 Notice that *sshd* (the SSH daemon) is listed as a LUM-Enabled service, then click *OK*.
- 6 (Optional) If you want to verify that SSH access works, install an SSH client on the workstation and attach to the lab server through one of the LUM-enabled users. Be aware, however, that this creates a POSIX home directory for the user in */home* and might require adjustments to procedures in the next section, [Creating a Home Directory for the linux\\* Users](#).
- 7 Continue with [Creating a Home Directory for the linux\\* Users](#).

## 4.5 Creating a Home Directory for the linux\* Users

The NetStorage exercises in this guide involve users' home directories and specific files they will copy to those directories. However, neither of the linux\* users currently has a home directory.

There are two standard ways to create home directories on Linux servers. The first way is for a user to log in to the server as a local user (or for OES 2, as a LUM-enabled user). For example, opening an SSH session creates a home directory.

Because it is unlikely that you want your users to have direct physical access to a production server, we will use the second way, which is to create the directory manually, assign the user and group to the directory, and then modify access permissions.

- 1 As the `root` user on the server's desktop, click *Computer > Home Folder*.
- 2 In the left panel, double-click *File System*, then double-click the `home` folder.
- 3 If you see home directories for only the `ncp_*` users that were created in iManager on the `HOME_NCP` volume, continue with [Step 4](#).  
If you see a home directory for one of the linux\* users, that means you used it to experiment with SSH access in [Step 6 on page 62](#), thus creating a home directory for the user. In that case, adjust the steps that follow as required.
- 4 Right-click the white space in the right panel and select *Create Folder*.
- 5 Type `linux1_lum-edir` as the folder name, then right-click the folder and select *Properties*.
- 6 Click the *Permissions* tab.
- 7 Click the *File Owner* drop-down list, then use the Up-arrow and Down-arrow keys to navigate to and select the `linux1_lum-edir` user.

Notice that the users that you created who are not enabled for LUM are not listed.

- 8 Click the *File Group* drop-down list, navigate to and select `LUMUsers`, then press Enter.

Neither this group nor the user you selected exist locally. However, because they are LUM-enabled, the server recognizes them as though they do.

The next three lines (Owner, Group, Others) indicate access permissions for the directory owner (`linux1_lum-edir`), the assigned group (`LUMUsers`), and everyone else (others).

Notice that both Group and Others have permission to *Read* (open) the contents of the folder and *Execute* (browse its contents). This is not what NetWare® administrators and users expect because home directories are private on NetWare servers.

- 9 Make this directory private by deselecting all of the access permissions for Group and Others.

For more information about directory privacy and aligning access on Linux servers to match what NetWare administrators are accustomed to, see “[Aligning NCP and POSIX File Access Rights](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

- 10 Click *Close*.
- 11 Right-click the white space in the right panel and select *Create Folder*.
- 12 Type `linux2_lum-edir` as the folder name, then right-click the folder and select *Properties*.
- 13 Click the *Permissions* tab.
- 14 Change the file owner to `linux2_lum-edir` and the file group to `LUMUsers` by using the drop-down lists.

- 15** Adjust the permissions for this directory by enabling the Write right for the group. This gives full rights to the user's home directory for anyone in the LUMUsers group, which is obviously not something you would normally do.

Later in the guide we will use this to contrast default POSIX file permissions with the Novell File and Directory Security Model.

- 16** Click *Close*.
- 17** Continue with **Novell CIFS on OES 2**.

Novell® CIFS lets Windows users access NSS volumes on Novell Open Enterprise Server 2 servers exactly as they would access a Windows file server. For a comparison to Novell Samba, see “Comparing Your CIFS File Service Options” in the *OES 2 SP2: Planning and Implementation Guide*.

This section discusses the following:

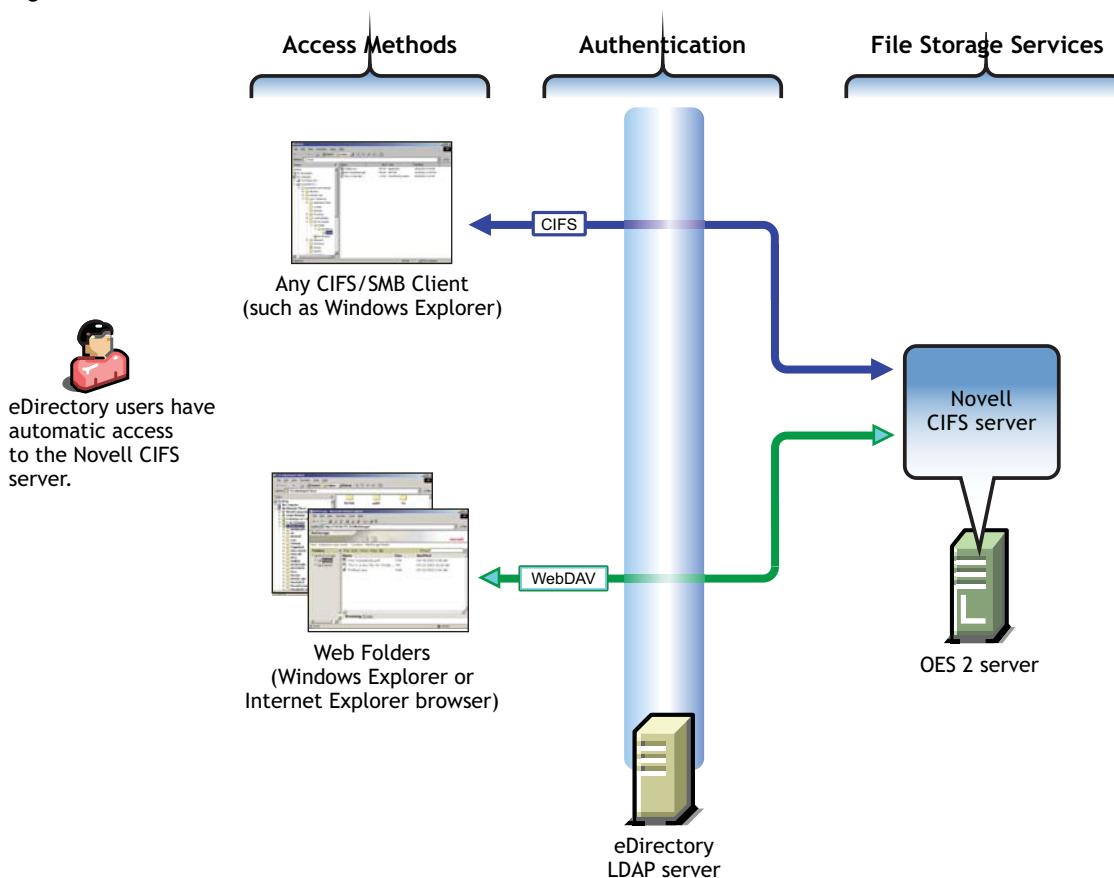

- ♦ Section 5.1, “Overview of Novell CIFS,” on page 65
- ♦ Section 5.2, “Setting the Search Context,” on page 66
- ♦ Section 5.3, “Making Novell CIFS Shares Available to CIFS Users,” on page 66
- ♦ Section 5.4, “Novell CIFS Users Access Rights,” on page 66

## 5.1 Overview of Novell CIFS

Figure 5-1 illustrates the file services available through Novell CIFS in OES 2.

More Information on Novell CIFS file services in OES 2 is found in “Novell CIFS Implementation and Maintenance” in the *OES 2 SP2: Planning and Implementation Guide*.

Figure 5-1 Novell CIFS

---

**IMPORTANT:** If you plan to use Novell CIFS in conjunction with Novell AFP and/or NCP file services, be sure to read “[Cross-Protocol File Locking Change](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

---

## 5.2 Setting the Search Context

By default, the search context for CIFS users is set to the container where the OES 2 server is installed. The CIFS proxy user searches in this context for users seeking access to the CIFS file service. You must set a context that points to the USERS container where your User objects are located.

- 1 In iManager > *Roles and Tasks*, click *File Protocols* > *CIFS*.
- 2 Click the *Browse* icon next to the *Server* field, then browse to and select the OES 2 lab server.
- 3 Click the *Context* tab.
- 4 Select the entry that points to the *SERVERS* container, then click *Delete*.
- 5 Click *New*.
- 6 Browse to and select the *USERS* container, then click *OK*.
- 7 Continue with [Making Novell CIFS Shares Available to CIFS Users](#).

## 5.3 Making Novell CIFS Shares Available to CIFS Users

By default, all NSS volumes hosted on an OES 2 server have shares associated with them. If you need a share to point to a subdirectory on an NSS volume, then you must create a new share. See “[Adding a New CIFS Share](#)” in the *OES 2 SP2: Novell CIFS for Linux Administration Guide*.

If a volume is created while the Novell CIFS service is running, the service must be restarted to discover the volume.

- 1 Click the *Shares* tab.
- 2 If the *HOME\_NSS* share is listed, skip to [Novell CIFS Users Access Rights](#).  
If not, continue with [Step 3](#).
- 3 Click the *General* tab, then click *Stop*. The service status changes to *Stopped*.
- 4 Click the *Start* sub-tab. The service status changes to *Running*.
- 5 Click the *Shares* tab.  
The *HOME\_NSS* share is listed.

## 5.4 Novell CIFS Users Access Rights

As illustrated in [Figure 5-1](#), all eDirectory users have automatic access to the Novell CIFS file service, assuming that the service is configured correctly.

However, access to the CIFS file service does not equate to access to the NSS file system and the folders and files it contains. The Novell File and Directory Trustee Rights model ensures that users can see only those files and folders to which they have access rights.

# NetWare CIFS and AFP on OES 2

# 6

NetWare® 6.5 SP8 supports native file access methods from Linux, Macintosh, UNIX\*, and Windows workstations to NSS volumes on NetWare servers. (Access to NetWare Traditional File System volumes is not supported.)

This section discusses the following:

- ♦ [Section 6.1, “Overview,” on page 67](#)
- ♦ [Section 6.2, “Enabling NFAP Services on the LAB\\_NW Server,” on page 68](#)

## 6.1 Overview

**Figure 5-1** illustrates the native File Access Protocol (NFAP) support services that are enabled by installing NetWare 6.5. A more detailed overview of NFAP file services on OES is found in “**Native File Access Protocols**” in the *NW 6.5 SP8: Planning and Implementation Guide*.

**Figure 6-1** Native File Access Support on NetWare 6.5

The exercises in this guide have you access the NetWare server by using native Windows functionality.

If you want to also experiment with Linux, UNIX, or Macintosh workstations, refer to the information in “[Native File Access Protocols Implementation and Maintenance](#)” in the *NW 6.5 SP8: Planning and Implementation Guide* after completing all the sections in this guide.

## 6.2 Enabling NFAP Services on the LAB\_NW Server

When you created the `nw_edir` user in iManager, you also created a home directory for the user on the HOME\_NW NSS volume on the virtualized NetWare server LAB\_NW.

By default, all NSS volumes on NetWare servers are available for CIFS and AFP access. To configure CIFS access, you must complete two tasks:

- ♦ [Section 6.2.1, “Creating a Share for the HOME\\_NW Volume,” on page 68](#)
- ♦ [Section 6.2.2, “Specifying a Search Context,” on page 68](#)

### 6.2.1 Creating a Share for the HOME\_NW Volume

NetWare CIFS requires that you specify the shares that users can access.

- 1 In iManager > *Roles and Tasks*, click *File Protocols* > *CIFS*.
- 2 Click the *Browse* icon next to the *Server* field, then browse to and select the LAB\_NW server.
- 3 Click the *Shares* tab, then click the *New* sub-tab.
- 4 In the *Share Name* field, type `home_nw`.  
This is the name used to attach to the share.
- 5 Click the *Browse* icon  next to the *Volume* field.
- 6 In the Object Selector, click the down-arrow  next to the LAB\_NW\_HOME\_NW volume, then click the link to the volume.
- 7 Click *OK* > *OK*.

### 6.2.2 Specifying a Search Context

You must specify a search context that NetWare can use to find users needing CIFS access.

- 1 Log into your VM host server as `root` and click *Computer* > *YaST* > *Virtualization* > *Virtual Machine Manager*.
- 2 Double-click the *LAB\_NW\_VM* virtual machine.
- 3 On the NetWare GUI, click the File Browser (folder) icon once to activate the mouse pointer and once to select the browser.
- 4 Double-click the `SYS:` volume.
- 5 Double-click the `ETC` folder.
- 6 Scroll down and double-click the `cifsetxs.cfg` file.

Notice that the search context is set to the SERVERS container. User searches occur only in the contexts specified in this file. Subcontainers are not searched.

- 7 Edit the file, replacing `SERVERS` with `USERS`, so that the line reads

```
OU=USERS.OU=LAB.O=COMPANY
```

- 8** Save the file, close the editor, and close the file browser.
- 9** Click the *Server Console* (computer) icon.
- 10** Stop and then start the CIFS service by entering the following commands:  

```
CIFSSTOP
```

```
CIFSSTART
```
- 11** Press Ctrl+Alt to release the mouse, then close both of the Virtual Machine Manager windows.
- 12** Continue with [Chapter 8, “iFolder 3.8,” on page 73](#).

Novell® AFP lets Macintosh users access NSS volumes on Novell Open Enterprise Server 2 servers using AFP networking, exactly as they would Macintosh file servers.

This section discusses the following:

- ♦ Section 7.1, “Overview,” on page 71
- ♦ Section 7.2, “Setting the Search Context,” on page 72
- ♦ Section 7.3, “Making NSS Volumes Available to AFP Users,” on page 72
- ♦ Section 7.4, “Novell AFP Users Access Rights,” on page 72

## 7.1 Overview

Figure 7-1 illustrates the file services available through Novell AFP in OES 2.

More Information on Novell AFP file services in OES 2 is found in “**Novell AFP Implementation and Maintenance**” in the *OES 2 SP2: Planning and Implementation Guide*.

**Figure 7-1** AFP File Access Support on OES 2

The exercises in this guide have you access the OES 2 server by using native Macintosh functionality.

---

**IMPORTANT:** If you plan to use Novell AFP in conjunction with Novell CIFS and/or NCP file services, be sure to read “**Cross-Protocol File Locking Change**” in the *OES 2 SP2: Planning and Implementation Guide*.

---

## 7.2 Setting the Search Context

By default, the search context for AFP users is set to the container where the OES 2 server is installed. The AFP proxy user searches in this context for users seeking access to the AFP file service. You must set a context that points to the USERS container where your User objects are located.

- 1 In iManager > *Roles and Tasks*, click *File Protocols* > *AFP*.
- 2 Click the *Browse* icon next to the *Server* field, then browse to and select the OES 2 lab server.
- 3 Click the *Contexts* tab.
- 4 Select the entry that points to the *SERVERS* container and click *Remove*.
- 5 Click *Add*.
- 6 Browse to and select the *USERS* container, then click *OK*.
- 7 Continue with **Making NSS Volumes Available to AFP Users**.

## 7.3 Making NSS Volumes Available to AFP Users

- 1 Click the *Volumes* tab, then click *Add*.
- 2 Click the *Browse* icon  next to the *Volume* field.
- 3 In the Object Selector, click the down-arrow  next to the HOME\_NSS volume, then click the link to the volume.
- 4 In the *Shared Volume Name* field, type AFP\_Home\_NSS and click *OK*.

## 7.4 Novell AFP Users Access Rights

As illustrated in **Figure 7-1**, eDirectory users can access any NSS volume where they are granted Novell trustee rights. For example, if they have a system-created home directory on the HOME\_NSS volume, they can see that directory.

However, if they don't have Novell trustee rights, they cannot access the volume. This is different than for CIFS users.

As with CIFS users, the Novell File and Directory Trustee Rights model ensures that users can see only those files and folders to which they have access rights.

As a key file service component of Novell® Open Enterprise Server (OES), Novell iFolder® 3.8 provides a repository on one or more OES 2 servers that stores master copies of locally accessible files.

This section discusses the following:

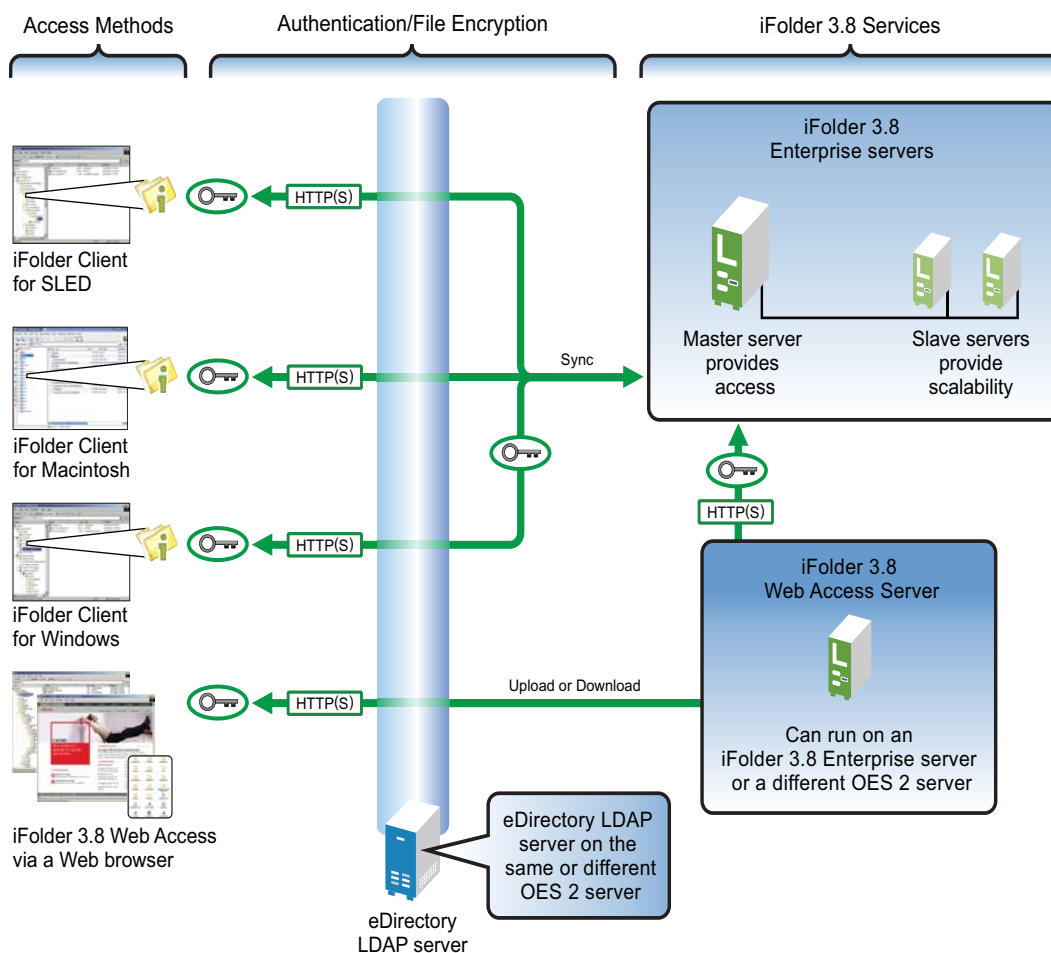

- ♦ Section 8.1, “Overview of iFolder,” on page 73
- ♦ Section 8.2, “Installing the iFolder Client,” on page 74
- ♦ Section 8.3, “Creating Corresponding Windows Users,” on page 75
- ♦ Section 8.4, “Refreshing the List of iFolder Users,” on page 75
- ♦ Section 8.5, “Configuring iFolder Accounts and Creating iFolders,” on page 76

## 8.1 Overview of iFolder

**Figure 8-1** illustrates the file services that are enabled by completing the steps in the sections that follow.

More detailed information on iFolder file services on OES 2 is found in “**Novell iFolder 3.8**” in the *OES 2 SP2: Planning and Implementation Guide*.

**Figure 8-1** *iFolder File Services on OES*

## 8.2 Installing the iFolder Client

**NOTE:** Although the exercises in this guide focus on Windows, the iFolder client is also available for Linux and Macintosh. For more information, see “**Getting Started**” the *Novell iFolder 3.8 Cross-Platform User Guide*.

The iFolder client is required for two tasks:

- ♦ Automatically synchronizing local iFolder files with the files on the iFolder 3.8 enterprise server.
- ♦ Sharing iFolders with other users.

**IMPORTANT:** To install the client, the workstation must have an active Internet connection.

To install the iFolder client:

- 1 Log in to the workstation as a Windows administrative user.
- 2 In your browser, access your OES 2 server's welcome pages by entering the following URL:

http://IP or DNS

where *IP\_or\_DNS* is the IP address or full DNS name of your lab server.

For example: `myserver.company.example.com`

- 3 On the OES 2 Welcome Page in the left panel, click the *Client Software* link.
- 4 Under *Available Downloads*, click the iFolder Client for Windows link appropriate for your workstation (32-bit or 64-bit).
- 5 Save the file.
- 6 Open the downloaded file and install the client.

The installation process includes several steps. For the installation to succeed, you must agree, accept, and answer Yes to the various prompts, including the Microsoft .NET installation if prompted. Accept all the defaults.
- 7 If you install Microsoft .NET, you might be prompted to restart the workstation. If prompted, click the *Restart* button, then after the workstation restarts, log in as the Windows administrative user.
- 8 Click through the dialog boxes, accepting the defaults until the process is finished. Then click *Finish* > *Yes* to restart the workstation.
- 9 After the workstation restarts, log in as an administrative user.
- 10 Cancel the iFolder Account Creation Wizard, then continue with **Creating Corresponding Windows Users**.

## 8.3 Creating Corresponding Windows Users

Some OES services, such as Novell iFolder, interact seamlessly with Windows users that have the same username and password as the eDirectory™ users.

For the exercises in this guide, you must now create Windows user accounts for the users listed in **Table 3-1 on page 56** and assign each user the same password you specified for the corresponding eDirectory account.

- 1 On the Windows workstation, log in as an Administrator user.
- 2 Access the Control Panel and select *User Accounts* (Windows XP) or *Users and Passwords* (Windows 2000).

On Windows 2000, you specify the password before the account type.
- 3 Create a user account for each user in **Table 3-1 on page 56**, specifying that the account is a computer administrator.
- 4 On Windows XP, select the user after creating it, and then create the same password for the user that you specified in **Step 6 on page 57**.
- 5 Repeat from **Step 3** for each additional user, then continue with **Refreshing the List of iFolder Users**.

## 8.4 Refreshing the List of iFolder Users

All eDirectory users are enabled for access to iFolder 3.8 by default. However, the iFolder 3.8 Administration utility must be synchronized with eDirectory. By default this happens every 24 hours.

- 1 Open your browser and log in to iManager as admin.

If you receive a Tomcat error, see [Section A.2, “iManager Tomcat Error,”](#) on page 109.

- 2 Click *iFolder 3.8 > Launch iFolder Admin Console*.
- 3 In the *iFolder Server* field, type the IP address of the OES 2 lab server.
- 4 Select the *Authenticate Using Current iManager Credentials* option.
- 5 Click *OK*.

The *Users* tab shows the users that are recognized by the iFolder server as having iFolder service access. Because the LDAP search context doesn't include the USERS container, the eDirectory users you have added don't appear in the list.

- 6 Click the *Servers* tab.
- 7 Click the blue link for the OES 2 lab server.
- 8 In the *LDAP Details* section, click the *Edit* button.
- 9 In the *LDAP Admin DN* field, type `cn=admin,o=company`.
- 10 In the *LDAP Admin Password* field, type the Admin user password.
- 11 In the *LDAP Contexts* field, change `SERVERS` to `USERS`, then click *OK*.

This changes the search context to the USERS directory.

- 12 In the *LDAP Details* section, click the *Sync Now* button.  
Notice that the default synchronization interval is 1440 minutes (24 hours).
- 13 Click the *Users* tab.  
Notice that the users you have created are added to the list.
- 14 Close the iFolder Administration console, then continue with [Configuring iFolder Accounts and Creating iFolders](#).

## 8.5 Configuring iFolder Accounts and Creating iFolders

Before users can create iFolders, they must set up an iFolder account on the workstation.

You should have already created a Windows user account for each eDirectory user as instructed in [Section 8.3, “Creating Corresponding Windows Users,”](#) on page 75. You will now configure an iFolder for `linux1_lum-edir` and invite the `ncp_edir` and `nw_edir` users to share the iFolder. Although you can create accounts for the other users, there are no exercises in this guide that involve them having iFolder accounts.

- 1 Log off as the administrative user, then log in to the Windows workstation as the `linux1_lum-edir` user that you created in [Section 8.3, “Creating Corresponding Windows Users,”](#) on page 75.
- 2 After the login process finishes, you should be prompted to set up an iFolder account. Click *Next*.  
If you are not prompted to set up an account, right-click the iFolder icon on the toolbar, select *Accounts*, then click *New*.
- 3 In the *Server Address* field, type the IP address or DNS hostname of your OES 2 server, then click *Next*.
- 4 Type the `linux1_lum-edir` for the username, then type the password you assigned to the user.

- 5** Select *Remember Password*, then click *Next > Connect*.
- 6** If prompted, accept the certificate by clicking *Yes*.
- 7** When prompted to create a default iFolder, deselect *Create Default Folder*, click *OK*, click *Finish*, and then close the iFolder information window.
- 8** Right-click the desktop, then click *New* and create a new folder named `linux1_lum-edir_IF3`.
- 9** After creating the folder, right-click it, then click *Convert to an iFolder*.
- 10** Click *OK*.
- 11** In the message that points out how iFolder folder icons look different, select *Do Not Show This Message Again*, then click *Close*.
- 12** Right-click the iFolder, then select *iFolder > Share with*.
- 13** In the iFolder Properties dialog box, click *Add*.
- 14** In the *iFolder Users* column, click *Ncp Edir*, then click *Add>>*.  
*Ncp Edir* is added to the *Selected Users* column.
- 15** Add *Nw Edir* to the *Selected Users* column as well.
- 16** Click *OK*.
- 17** Change the access rights for *Nw Edir* from *Read/Write* to *Read Only* by doing the following:
  - 17a** Click *Nw Edir*.
  - 17b** Click *Access*.
  - 17c** Select *Read Only*.
  - 17d** Click *OK*.
- 18** Click *Apply > OK*.  
The two users are configured to access `linux1_lum-edir`'s iFolder.
- 19** Log out of the workstation.
- 20** Continue with [Chapter 9, "iPrint," on page 79](#).

As the print services component of Novell® Open Enterprise Server (OES), Novell iPrint provides a powerful and easy-to-implement printing solution that lets your network users print from any Linux, Macintosh, or Windows workstation to any network printer.

This section discusses the following:

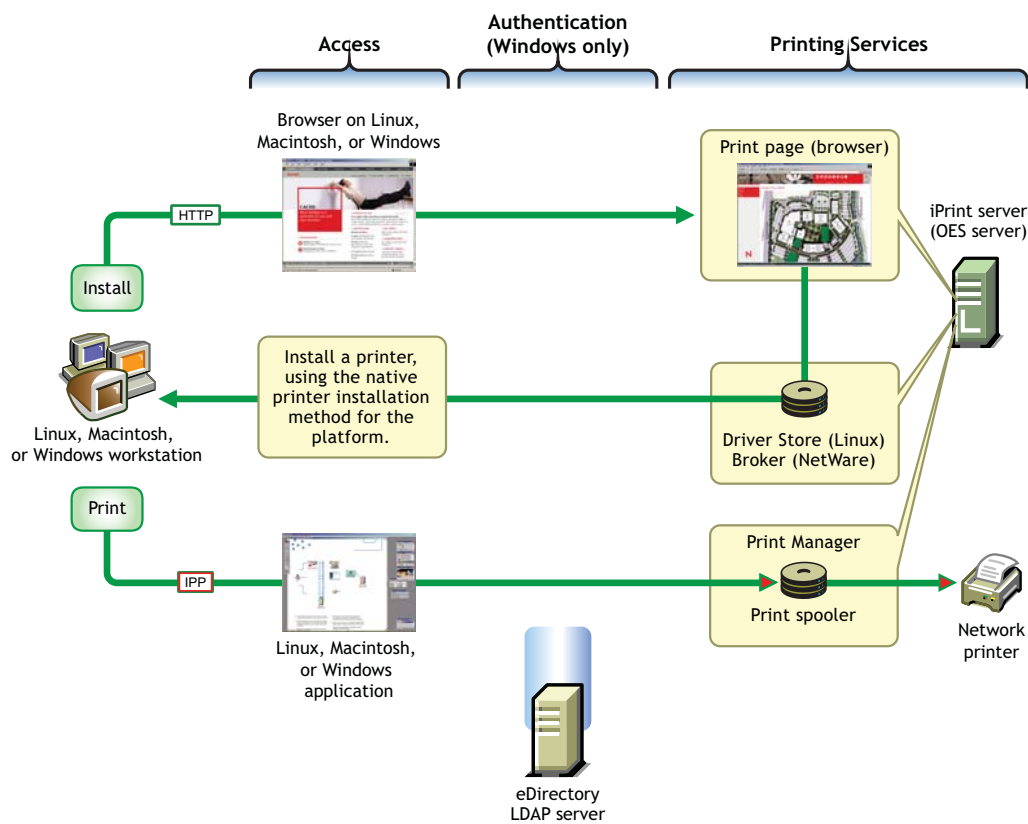

- ♦ Section 9.1, “Overview of iPrint,” on page 79
- ♦ Section 9.2, “Creating an eDirectory Context for Printers,” on page 80
- ♦ Section 9.3, “Creating a Print Driver Store,” on page 81
- ♦ Section 9.4, “Creating a Print Manager Object,” on page 81
- ♦ Section 9.5, “Adding Printer Drivers to the Driver Store from the Windows Platforms,” on page 81
- ♦ Section 9.6, “Creating iPrint Printer Objects,” on page 83

## 9.1 Overview of iPrint

**Figure 9-1** illustrates the printing services that are enabled by completing the steps in the sections that follow.

More detailed information on iPrint services in OES 2 is found in “**iPrint Functionality**” in the *OES 2 SP2: Planning and Implementation Guide*.

Figure 9-1 iPrint on OES

## 9.2 Creating an eDirectory Context for Printers

System administrators often create one or more container objects just for network printers. Obviously, this is an optional organizational preference issue. The printers themselves can be placed in the most convenient and accessible locations for your network users.

- 1 Log in to the lab Windows workstation as a Windows user with Administrator privileges.
- 2 Cancel the iFolder wizard.
- 3 Start iManager and log in as the Admin user.  
If you receive a Tomcat error, see [Section A.2, "iManager Tomcat Error,"](#) on page 109.
- 4 Click the *View Objects* icon .
- 5 Click the *Browse* tab.
- 6 In the left pane, click the down-arrow  next to the COMPANY Organization object.
- 7 Click *LAB*, then select *Create Object* from the drop-down list.
- 8 From the *Available Object Classes* list, select *Organizational Unit*, then click *OK*.
- 9 In the *Organizational Unit Name* field, type PRINTERS.
- 10 Click *OK* twice.

## 9.3 Creating a Print Driver Store

iPrint stores print driver files by workstation type for each of your network printers in a driver store in eDirectory™.

- 1 In iManager, click the *Roles and Tasks* icon .
- 2 Click *iPrint > Create Driver Store*.
- 3 In the *Driver Store Name* field, type `Print_Drivers`.
- 4 Click the *Browse* icon  next to the *Container Name* field.
- 5 Click the down-arrow  next to LAB, then click the PRINTERS Organizational Unit object.
- 6 Click the *Browse* icon  next to the *eDir Server* field.
- 7 Click the down-arrow  next to LAB, click the down-arrow  next to SERVERS, then click your OES 2 lab server.
- 8 Click *OK* twice.
- 9 Continue with [Section 9.4, “Creating a Print Manager Object,”](#) on page 81.

## 9.4 Creating a Print Manager Object

The iPrint Manager is represented by and managed through a Print Manager object in eDirectory. It is a daemon that runs on the OES 2 server, and it must be running when you create Print objects. After printing is set up, the iPrint Manager receives print job requests and forwards them to printers when the printers are ready.

- 1 Continuing from [Step 8](#) in the previous section, click *iPrint > Create Print Manager*.
- 2 In the *Manager Name* field, type the following:  
`iPrint_Manager`
- 3 Click the *Browse* icon  next to the *Container Name* field.
- 4 Click the down-arrow  next to LAB, then click PRINTERS.
- 5 Click the *Browse* icon  next to the *eDir Server* field.
- 6 Click the down-arrow  next to LAB, click the down-arrow  next to SERVERS, then click your OES 2 lab server.
- 7 Click the *Browse* icon  next to the *Driver Store* field.
- 8 Click the down-arrow  next to LAB, click the down-arrow  next to PRINTERS, then click *Print\_Drivers*.
- 9 In one of the *iPrint Service* fields, type either the full DNS name of your lab server or its IP address, depending on the option you select.
- 10 Click *OK* twice.

## 9.5 Adding Printer Drivers to the Driver Store from the Windows Platforms

You can load printer drivers to the Driver Store by using driver files. However, because most Windows workstations have an extensive list of printer drivers available on the system, the simplest way to add drivers for a Windows workstation is to upload them directly.

You can upload Windows XP drivers from a Windows XP workstation, Windows 2000 drivers from a Windows 2000 workstation, etc.

Complete the following steps once for each of the Windows platforms (XP, 2000, etc.) that you have in your lab:

---

**IMPORTANT:** This procedure requires Internet Explorer 6 or later.

---

- 1 Open Internet Explorer 6 or later on the workstation and enter the following URL in the Address field:

`http://IP_or_DNS/ipp`

where *IP\_or\_DNS* is the IP address or DNS name of your OES 2 server.

- 2 Click the *Install iPrint Client* link just below the banner.
- 3 Click either *Open* (Windows 2000) or *Run* (Windows XP).
- 4 Click *Next* and follow any prompts.
- 5 After the client installs, click *Finish*.
- 6 Close the browser, then open it again.
- 7 Start iManager (`http://server/nps`) and log in as the Admin user.  
If you receive a Tomcat error, see [Section A.2, “iManager Tomcat Error,” on page 109](#).
- 8 If you are running Internet Explorer 6, skip to [Step 12](#).  
or  
For Internet Explorer 7, you must configure the pop-up blocker. Continue with [Step 9](#).
- 9 Right-click above the iManager panel and make sure the *Menu Bar* option is selected.
- 10 In the Menu Bar, click *Tools > Pop-Up Blocker > Pop-Up Blocker Settings*.
- 11 In the *Address of Website to Allow* field, type the IP address of the OES 2 lab server, then click *Add > Close*.
- 12 Click *iPrint > Manage Driver Store*.
- 13 Click the *Browse* icon  next to the *iPrint Driver Store Name* field.
- 14 Browse to the Printers container (*COMPANY > LAB > PRINTERS*), then click the *Print\_Drivers* object.
- 15 Click *OK*.
- 16 Click the *Drivers* tab.
- 17 If you are running Internet Explorer 6, skip to [Step 21](#).  
or  
If you are running Internet Explorer 7 and have not previously approved the iPrint ActiveX\* plug-in to run, an Information Bar appears directly above the iManager pane.
- 18 If no Information Bar appears directly above the iManager pane, skip to [Step 21](#).
- 19 Click the Information Bar and select *Run ActiveX Control*, then click *Run > Retry*.
- 20 Repeat from [Step 12](#).
- 21 Select the sub-tab for the workstation type you are running.

You can add drivers from the system only for the workstation type you are running.

- 22** Click *Add from System*.
- 23** In the Add Resource dialog box, select the correct driver for the printer you plan to use for the lab test.
- 24** Click *OK*.
- 25** (Optional) To test multiple printers, repeat **Step 22** through **Step 24** for each printer you want to test.
- 26** When you are finished, click *Apply > OK*.

## 9.6 Creating iPrint Printer Objects

You can create iPrint Printer objects for all your printers that have drivers in the Driver Store and an IP address or DNS name.

- 1** In iManager, click the *Roles and Tasks* icon .
- 2** Click *iPrint > Create Printer*.
- 3** In the *Printer Name* field, type a name for your printer.
- 4** Click the *Browse* icon  next to the *Container Name* field.
- 5** Click the down-arrow  next to LAB, then click PRINTERS.
- 6** Click the *Browse* icon  next to the *Print Manager Name* field.
- 7** Click the down-arrow  next to LAB, click the down-arrow  next to PRINTERS, then click *iPrint\_Manager*.
- 8** Type the DNS name or IP address of the printer in the field indicated.
- 9** Type a location so users know where to find the printer.
- 10** (Optional) Type a description.
- 11** Click *Next*.
- 12** Select the printer driver by using the drop-down list for the Windows platform of your lab workstation.
- 13** Click *Next > OK*.
- 14** Close iManager.
- 15** Continue with **Chapter 10, “NetStorage,”** on page 85.

As a versatile file services component of Novell® Open Enterprise Server (OES), NetStorage provides Web-based access to and management of any files on OES 2 servers, except the iFolder 3 files, which are accessed through the iFolder Web Access Server instead.

This section discusses the following:

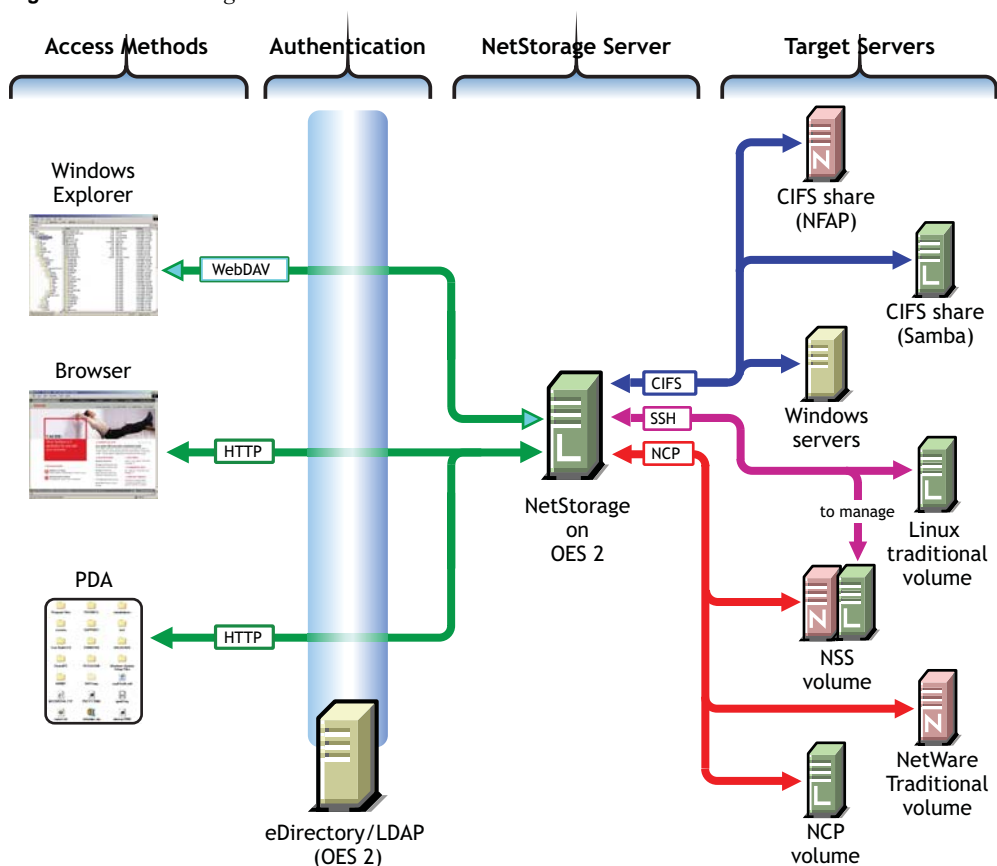

- ♦ [Section 10.1, “Overview of NetStorage,” on page 85](#)
- ♦ [Section 10.2, “Making Directories Accessible Through NetStorage,” on page 86](#)

## 10.1 Overview of NetStorage

[Figure 10-1 on page 85](#) illustrates the NetStorage file services that are enabled by default.

More detailed information on NetStorage file services on OES is found in “[NetStorage](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

**Figure 10-1** NetStorage on OES

## 10.2 Making Directories Accessible Through NetStorage

NetStorage makes files on OES 2 servers available on the Internet. Directories can be made available as organizational needs dictate. For the exercises in this guide, we will focus on user home directories.

- ♦ [Section 10.2.1, “NCP Users Have Automatic Access to Their Home Directories,” on page 86](#)
- ♦ [Section 10.2.2, “Creating a Storage Location Object in iManager,” on page 86](#)
- ♦ [Section 10.2.3, “Adding the Object to a Storage Location List,” on page 87](#)
- ♦ [Section 10.2.4, “SSH and NetStorage Administration,” on page 88](#)

### 10.2.1 NCP Users Have Automatic Access to Their Home Directories

For users who have a home directory specified in eDirectory™ (on an NCP™ or NSS volume), access to that home directory is automatic.

By default, when users log in to NetStorage, they see a storage location named `Home@TREE_NAME`. This means that the `ncp_*`, the `nss_*` users, and the `nw_edir` user each see their home directories when they log into NetStorage.

The label that users see is configurable in the *File Access (NetStorage)* iManager plug-in by using the *NetWare Storage Provider* task. You can also specify home directories in additional trees if users log in to multiple trees. For more information, see “[NetWare Storage Provider](#)” in the *OES 2 SP2: NetStorage for Linux Administration Guide*.

---

**TIP:** The first time you access the *NetWare Storage Provider* task in iManager, the configuration is blank and the column headings are collapsed. To display the configuration, click *Set Defaults*, click another task, then click *NetWare Storage Provider* again. All of the columns are then displayed.

---

To make other directories on an OES 2 server available through NetStorage, including non-NCP/ NSS home directories, you must create a Storage Location Object that points to the directory and then add the object to a Storage Location List as explained in the following sections.

### 10.2.2 Creating a Storage Location Object in iManager

A Storage Location object specifies an access protocol and points to a directory on either the NetStorage server itself or another accessible server. After object creation, users with rights to the directory can access storage location objects through NetStorage.

For connections to Storage Location objects, NetStorage supports both CIFS and SSH as alternatives to NCP (the default NetStorage protocol). Although they are used in this guide, SSH storage locations should only be used after certain security issues are understood and dealt with. (For more information, see “[SSH Security Considerations](#)” in the *OES 2 SP2: Planning and Implementation Guide*.)

Because the `linux*_lum-edir` users’ home directories are on a Linux traditional volume, there is no default access and you must create a Storage Location object for them to use.

Because the CIFS protocol on your lab server uses Novell CIFS, and because Novell CIFS provides access to only NSS volumes, the Storage Location object must use SSH.

To create an SSH Storage Location object:

- 1 Start iManager by entering the following URL in a browser Address field:

`http://IP_or_DNS/nps`

where *IP\_or\_DNS* is the IP address or DNS name of your OES 2 server.

If you receive a Tomcat error, see [Section A.2, “iManager Tomcat Error,”](#) on page 109.

- 2 Log in to iManager as the Admin user.

- 3 Click the *Roles and Tasks* icon .

- 4 Click *File Access (NetStorage) > New Storage Location*.

- 5 In the *Object Name* field, type

`StorLoc_hostname`

where *hostname* is the name of your lab server. This is the name of the Storage Location object in eDirectory (for example, `StorLoc_myserver`).

- 6 In the *Display Name* field, type

`Linux_Home_Directories`

This is the name that users see in the NetStorage directory access list.

- 7 In the *Directory Location* field, type

`ssh://IP_or_DNS_Name/users`

where *IP\_or\_DNS\_Name* is the IP address or full DNS name of your lab server (for example, `cifs://myserver.mysite.company.example.com/users`).

---

**IMPORTANT:** Protocol designators, such as `ssh` and `cifs`, are case-sensitive on OES 2 servers. Make sure you don't type the common uppercase (SSH or CIFS) out of habit.

---

- 8 Click the *Browse* icon  next to the *Context* field.

- 9 Browse to and select the **SERVERS** Organizational Unit object.

The new Storage Location object will be created in the **SERVERS** organizational unit object.

- 10 Click *Create > OK*.

### 10.2.3 Adding the Object to a Storage Location List

Storage Location Lists are required for granting access for users, groups, or containers (Organizational Unit objects) to Storage Location objects.

- 1 In the list of tasks below *File Access (NetStorage)*, click *Assign Storage Location to Object*.

- 2 Click the *Browse* icon  next to the *Object* field.

This field contains the user, group, or OU object that is granted access to the Storage Location object.

- 3 Click **USERS** > *OK*.

- 4 Click the *Browse* icon  next to the *Storage Location Objects* field.

- 5 Click the down-arrow  next to **SERVERS**.

6 Click the StorLoc\_*hostname* object for your lab server, then click *OK*.

You could add multiple Storage Location objects to the list if needed, but we are only adding one.

7 Click *OK* twice.

## 10.2.4 SSH and NetStorage Administration

Many network administrators prefer to use SSH for remote server administration. NetStorage includes a special SSH-based Storage Location object named NSS\_Volumes that lets eDirectory Admin users administer NSS volumes on OES 2 through NetStorage. Admin users can assign trustees, administer NSS file and directory attributes, restrict directory size, and so on.

As a general security precaution, SSH services are not enabled by default on OES 2 servers. However, you enabled SSH services in [Section 4.4, “Allowing SSH Access,” on page 61](#), and then you enabled SSH as a LUM-enabled service, thus giving SSH access to LUM-enabled users.

The eDirectory Admin user has SSH access because it is a LUM-enabled user by default. This means that the Admin user can use SSH for remote server administration and it can administer the server’s NSS volumes through NetStorage.

---

**NOTE:** Unlike home directory access, which automatically connects all users in the tree with their NCP or NSS home directories no matter which server the directories are on, default administrative access is limited to the nssvolumes Storage Location object located in COMPANY. To provide administrative access to the HOME\_NW volume on the LAB\_NW NetWare® server, you would need to create an NCP Storage Location object that points to that volume.

---

Continue with [Chapter 11, “Getting Acquainted with OES,” on page 89](#).

# Getting Acquainted with OES

# 11

After you have installed Novell® Open Enterprise Server (OES) and completed the configuration instructions located in the preceding sections, your OES 2 server is ready for lab use.

The instructions and information in this section acquaint you with the basic services available in OES. More detailed service overviews are available in the *OES 2 SP2: Planning and Implementation Guide*. For comprehensive documentation for each service, see the administration guides and other documentation listed on the [OES documentation Web site \(http://www.novell.com/documentation/oes\)](http://www.novell.com/documentation/oes).

This section guides you through the following tasks:

- ♦ Section 11.1, “Preparing Files for the Lab Exercises,” on page 89
- ♦ Section 11.2, “Exercises for linux1\_lum-edir,” on page 90
- ♦ Section 11.3, “Exercises for linux2\_lum-edir,” on page 92
- ♦ Section 11.4, “Exercises for ncp\_lum-edir,” on page 94
- ♦ Section 11.5, “Exercises for ncp\_edir,” on page 95
- ♦ Section 11.6, “Exercises for nss\_edir,” on page 99
- ♦ Section 11.7, “Administrative Tasks Available in NetStorage,” on page 100
- ♦ Section 11.8, “Exercises for nss\_lum-edir,” on page 102
- ♦ Section 11.9, “Exercises for nw\_edir,” on page 103
- ♦ Section 11.10, “Macintosh Exercises and Novell AFP,” on page 104
- ♦ Section 11.11, “What’s Next,” on page 105

## 11.1 Preparing Files for the Lab Exercises

You will use four small text files in the exercises that follow.

- 1 Log in to the Windows workstation as a Windows user with Administrator privileges.
  - 2 Access this page in the online documentation.
  - 3 Right-click each of the following links, select *Save Link As*, and save the file to the desktop.
    - ♦ [MyPrivateFile.txt \(http://www.novell.com/documentation/oes2/download/MyPrivateFile.txt\)](http://www.novell.com/documentation/oes2/download/MyPrivateFile.txt)
    - ♦ [PublicInformation.txt \(http://www.novell.com/documentation/oes2/download/PublicInformation.txt\)](http://www.novell.com/documentation/oes2/download/PublicInformation.txt)
    - ♦ [TeamProjectReadOnly.txt \(http://www.novell.com/documentation/oes2/download/TeamProjectReadOnly.txt\)](http://www.novell.com/documentation/oes2/download/TeamProjectReadOnly.txt)
    - ♦ [TeamProjectWrite.txt \(http://www.novell.com/documentation/oes2/download/TeamProjectWrite.txt\)](http://www.novell.com/documentation/oes2/download/TeamProjectWrite.txt)
  - 4 If you are working on Windows XP, move the downloaded files to the *My Computer > Shared Documents* folder on the workstation.
- or

If you are working on Windows 2000, do the following:

- 4a** On the desktop, right-click the *My Documents* folder, then select *Properties*.
- 4b** Click the *Sharing* tab.
- 4c** Select *Share This Folder*.
- 4d** Change *My Documents* to *Shared Documents*.
- 4e** Click *OK*.
- 4f** Move the downloaded files to the *My Documents* folder.
- 5** Log out of Windows.
- 6** Continue with the next section, [Exercises for linux1\\_lum-edir](#).

## 11.2 Exercises for linux1\_lum-edir

- ♦ [Section 11.2.1, “What linux1\\_lum-edir Can Do,” on page 90](#)
- ♦ [Section 11.2.2, “Using NetStorage,” on page 91](#)

### 11.2.1 What linux1\_lum-edir Can Do

This user has the following service access:

**Table 11-1** *linux1\_lum-edir Service Access*

Service	Details	Explored for This User in This Guide
Novell iFolder® 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	Yes. This was done previously in <a href="#">Section 8.5, “Configuring iFolder Accounts and Creating iFolders,” on page 76</a> .
Novell AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	See <a href="#">Section 11.10, “Macintosh Exercises and Novell AFP,” on page 104</a> .
Novell CIFS	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	No
NetStorage	Can access NetStorage because of the Storage Location Object created in <a href="#">Section 10.2.2, “Creating a Storage Location Object in iManager,” on page 86</a> .  NetStorage provides this user with access to its home directory, which it would otherwise not have.	Yes, to demonstrate file copying and deleting.  Also to show that the <code>linux2_lum-edir</code> directory is publicly available, and not private as a NetWare® administrator would expect it to be. In fact, the directory can also be written to by any member of the LUMUsers group because of the action you took in <a href="#">Step 14 on page 63</a> .

Service	Details	Explored for This User in This Guide
iPrint	Can install and use the printer made available in <a href="#">Chapter 9, “iPrint,” on page 79.</a>	No

## 11.2.2 Using NetStorage

- 1 Log in to the Windows workstation as the `linux1_lum-edir` user.
- 2 Close the iFolder window.
- 3 Open your browser and log into NetStorage by using the following URL:

`http://IP or DNS/netstorage`

where *IP or DNS* is your OES 2 server’s IP address or DNS name.

- 4 Type `linux1_lum-edir` as the *User Name*, type the associated password in the *Password* field, then click *OK*.
- 5 Select the `Linux_Home_Directories` storage location you created in [Section 10.2.2, “Creating a Storage Location Object in iManager,” on page 86.](#)
- 6 Select the `linux1_lum-edir` directory.
- 7 Click *File > Upload*.  
NetStorage doesn’t support dragging and copying files. Instead you upload files you want to store from the workstation to the server, and you download files you want to work with from the server to the workstation.
- 8 If prompted, disable the pop-up blocker and click *File > Upload* again if necessary to open the Upload File dialog box.
- 9 Click the *Browse* button, browse to the `Shared Documents` folder where you copied the four files in [Step 3 on page 89](#), select the first file and click *Open*.
- 10 Click the plus (+) sign next to *Browse*, then repeat the same process to select and open the other three files.
- 11 Click the *Upload* button.

All four files should now be copied to the `linux1_lum-edir` directory.

- 12 Select the `linux2_lum-edir`, `ncp_edir`, and `ncp_lum-edir` folders in turn and attempt to copy the first file to each folder.

Because you assigned the Write right the LUMUsers group in [Step 14 on page 63](#), the first copy attempt succeeds, but the other attempts fail because the `linux1_lum-edir` user doesn’t have the necessary rights to the `ncp*` user folders.

- 13 Open the `linux1_lum-edir` folder, then select `MyPrivateFile.txt`.
- 14 Click *File > Delete > OK*.

The file is deleted.

- 15 Click *View > Show Deleted Files*.

The deleted file is not listed because this feature relies on the Salvage and Purge functionality that is available only on NSS volumes, but the underlying file system for the `/home` directory we are working with is Reiser.

For more information on using NetStorage, see the *OES 2 SP2: NetStorage for Linux Administration Guide*.

**16** Continue with the next section, *Exercises for linux2\_lum-edir*.

## 11.3 Exercises for linux2\_lum-edir

- ♦ *Section 11.3.1, “What linux2\_lum-edir Can Do,” on page 92*
- ♦ *Section 11.3.2, “Using NetStorage,” on page 92*
- ♦ *Section 11.3.3, “Using iPrint,” on page 93*

### 11.3.1 What linux2\_lum-edir Can Do

This user has the following service access:

**Table 11-2** *linux2\_lum-edir Service Access*

Service	Details	Explored for This User in This Guide
iFolder 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	No
Novell AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	See <i>Section 11.10, “Macintosh Exercises and Novell AFP,” on page 104.</i>
Novell CIFS	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	No
NetStorage	Can access NetStorage because of the Storage Location Object created in <i>Section 10.2.2, “Creating a Storage Location Object in iManager,” on page 86.</i> Otherwise, this user would not have access to its home directory because it was created manually as a POSIX directory rather than being specified in iManager.	Yes
iPrint	Can install and use the printer made available in <i>Chapter 9, “iPrint,” on page 79.</i>	Yes

### 11.3.2 Using NetStorage

**1** Log in to the Windows workstation as the linux2\_lum-edir user.

- 2 When the iFolder wizard launches, click *Cancel*.
- 3 Open your browser and log into NetStorage by using the following URL:  
  
`http://IP or DNS/netstorage`  
where *IP or DNS* is your OES 2 server's IP address or DNS name.
- 4 Type `linux2_lum-edir` as the *User Name*, type the associated password in the *Password* field, then click *OK*.
- 5 Click the `Linux_Home_Directories` storage location you created in [Section 10.2.2, "Creating a Storage Location Object in iManager," on page 86](#).
- 6 In the left navigation frame, click *linux2\_lum-edir*.
- 7 Right-click the file in the right frame and notice that you can move, copy, download, delete, and rename the file through the NetStorage interface.
- 8 Select *Delete*.
- 9 Click *OK*.

The file is deleted.

Although the file was actually owned by the `linux1_lum-edir` user who copied it to the folder, `linux2_lum-edir` can delete the file because the LUMUsers group has the Write right on the folder.

For a brief overview of what the different POSIX rights allow on directories and files, see "[Linux \(POSIX\) File System Access Rights](#)" in the *OES 2 SP2: Planning and Implementation Guide*.

- 10 Click *View > Show Deleted Files*.  
  
The deleted file is not listed because this feature relies on the Salvage and Purge functionality that is available only on NSS volumes, and the underlying file system for the `/home` directory we are working with is Reiser.
- 11 Click *File > Upload*.
- 12 Click the *Browse* button, browse to the `Shared Documents` folder, select the first file, and click *Open*.
- 13 Click the plus (+) sign next to *Browse*, and then repeat the same process to select and open the other three files.
- 14 Click the *Upload* button.

All four files should now be copied to the `linux2_lum-edir` directory.

For more information on using NetStorage, see the [OES 2 SP2: NetStorage for Linux Administration Guide](#).

### 11.3.3 Using iPrint

- 1 In the browser, access the iPrint page by using the following URL:  
  
`http://IP or DNS/ipp`  
where *IP or DNS* is your OES 2 server's IP address or DNS name.
- 2 (Conditional) If you have not previously installed the iPrint client on the workstation, click the *Install iPrint Client* link and install the client now.

- 3 Click the link for the printer you created in [Section 9.6, “Creating iPrint Printer Objects,”](#) on [page 83](#).

You might need to click the *Refresh* button to see the printers.

- 4 Answer the prompts to install the printer on the workstation.
- 5 Access the Printers property page by clicking *Start > Settings > Printers*.
- 6 Right-click the printer, then click *Properties*.
- 7 Click *Print Test Page > OK > OK*.

A test page should print at your printer.

For more information on various iPrint capabilities, see “[Customizing iPrint](#)” in the *OES 2 SP2: iPrint for Linux Administration Guide*.

- 8 Continue with the next section, [Exercises for ncp\\_lum-edir](#).

## 11.4 Exercises for ncp\_lum-edir

- ♦ [Section 11.4.1, “What ncp\\_lum-edir Can Do,”](#) on [page 94](#)
- ♦ [Section 11.4.2, “Using NetStorage,”](#) on [page 95](#)

### 11.4.1 What ncp\_lum-edir Can Do

This user has the following service access:

**Table 11-3** *ncp\_lum-edir Service Access*

Service	Details	Explored for This User in This Guide
iFolder 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	No
Novell AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	See <a href="#">Section 11.10, “Macintosh Exercises and Novell AFP,”</a> on <a href="#">page 104</a> .
Novell CIFS	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	No
NetStorage	Can access its home directory through NetStorage because all home directories created through iManager and stored as attributes in eDirectory™ are exposed through the HOME@EXAMPLE_TREE default storage location.	Yes

Service	Details	Explored for This User in This Guide
iPrint	Can install and use the printer made available in <a href="#">Chapter 9, “iPrint,” on page 79</a> .	No

## 11.4.2 Using NetStorage

- 1 Log in to the Windows workstation as the ncp\_lum-edir user.
- 2 When the iFolder wizard launches, click *Cancel*.
- 3 Open your browser and log into NetStorage by using the following URL:  
  

```
http://IP or DNS/netstorage
```

where *IP or DNS* is your OES 2 server’s IP address or DNS name.
- 4 Type ncp\_lum-edir as the *User Name*, type the associated password in the *Password* field, then click *OK*.
- 5 Click the HOME@EXAMPLE\_TREE storage location.  
Unlike the Linux\_Home\_Directories storage location, this directly opens the home directory itself.
- 6 Click *File > Upload*, browse to the Shared Documents folder, and upload one of the text files.  
The file appears in the folder.
- 7 Click the ncp\_lum-edir folder in the Linux\_Home\_Directories storage location.  
Notice that the folder appears to be empty.  
This is because the ncp\_lum-edir home directory was created when the user object was created in iManager by the eDirectory Admin user. The ncp\_lum-edir user can see that the directory exists because it is a member of the LUMUsers group and has SSH access to the /home directory on the OES 2 server, but it has no POSIX rights to view the directory’s contents. From a POSIX perspective, the Admin user owns the directory.
- 8 Click the linux2\_lum-edir folder in the Linux\_Home\_Directories storage location.  
Notice that the four files uploaded by the user in [Step 11 on page 93](#) are listed.  
This is because the ncp\_lum-edir user is a member of the LUMUsers group, and that group has all rights to linux2\_lum-edir’s home directory as assigned in [Step 15 on page 64](#).

For more information on using NetStorage, see the [OES 2 SP2: NetStorage for Linux Administration Guide](#).

## 11.5 Exercises for ncp\_edir

- ♦ [Section 11.5.1, “What ncp\\_edir Can Do,” on page 95](#)
- ♦ [Section 11.5.2, “Using iFolder,” on page 96](#)
- ♦ [Section 11.5.3, “Using NetStorage,” on page 98](#)

### 11.5.1 What ncp\_edir Can Do

This user has the following service access:

**Table 11-4** *ncp\_edir Service Access*

Service	Details	Explored for This User in This Guide
iFolder 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	Yes
Novell AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	See <a href="#">Section 11.10, “Macintosh Exercises and Novell AFP,”</a> on page 104.
Novell CIFS	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	No
NetStorage	Can access its home directory through NetStorage because all home directories created through iManager and stored as attributes in eDirectory are exposed through the HOME@EXAMPLE_TREE default storage location.	Yes
iPrint	Can install and use the printer made available in <a href="#">Chapter 9, “iPrint,”</a> on page 79.	No

## 11.5.2 Using iFolder

- ♦ [“Setting Up iFolder”](#) on page 96
- ♦ [“Observing File Synchronization”](#) on page 97
- ♦ [“Using iFolder Web Access”](#) on page 97

### Setting Up iFolder

linux2\_lum-edir has full access to all iFolder user functionality, but for the purposes of this guide we will accept only the invitation that was extended by linux1\_lum-edir and briefly explore what is available through that invitation.

- 1 At the Windows workstation, log in as ncp\_edir.
- 2 After the iFolder Account Creation Wizard launches, click *Next*.
- 3 In the *Server Address* field, type the IP address or DNS name of the OES 2 lab server, then click *Next*.
- 4 Type the username and password for ncp\_edir, select *Remember password on This Computer*, then click *Next*.
- 5 Click *Connect*.
- 6 If prompted, accept the certificate by clicking *Yes*.

- 7 Deselect *Create Default iFolder*, then click *Next*.
- 8 Click *Finish*.
- 9 In the iFolder dialog box, click *View > Refresh*, then click *linux1\_lum-edir\_IF3*.  
Remember that this is the iFolder that linux1\_lum-edir shared with the ncp\_edir user.
- 10 On the left under *iFolder Actions*, click *Download*.
- 11 Click *OK*.  
The iFolder is created on the desktop.
- 12 Double-click the iFolder to open it in Windows Explorer.
- 13 Navigate to the *Shared Documents* folder, then drag and copy (using the Ctrl key) the four files to the *linux1\_lum-edir\_IF3* folder.  
You can do this because ncp\_edir has default Read/Write permissions to the shared iFolder.  
Make sure you copy (by pressing the Ctrl key) rather than moving the files from the *Shared Documents* folder. Otherwise, the files won't be available to other users who log in.
- 14 Continue with the next section, "**Observing File Synchronization**."

## Observing File Synchronization

To understand more about how iFolder works, it is helpful to observe the file synchronization processes in action.

- 1 On the desktop in the taskbar, right-click the iFolder icon and select *Synchronization Log*.  
The iFolder Synchronization Log opens.
- 2 Right-click the iFolder icon again and select *Preferences*.
- 3 Change the *Synchronization* interval to 1 minute.  
Normally you would not want to synchronize this often, but for our current purposes it helps to expedite log activity.
- 4 Delete the *MyPrivateFile.txt* file.  
Within a couple of minutes the change is synchronized with the iFolder server. Notice that there are various synchronization operations involved to ensure that all changes are tracked in order and coordinated among the various iFolders on the server and affected workstations.
- 5 Continue with the next section, "**Using iFolder Web Access**."

## Using iFolder Web Access

---

**NOTE:** By default, interaction with an iFolder 3.8 server is encrypted through SSL 3.0.

---

Users can access their iFolders through most browsers that support SSL 3.0.

- 1 Open your browser and enter the following URL:  
`https://IP_or_DNS_name/ifolder`  
where *IP\_or\_DNS\_name* is the IP address or complete DNS name of your OES 2 server.
- 2 If prompted, accept the certificate.
- 3 Log in as ncp\_edir.

- 4 Click the *linux1\_lum-edir\_IF3* link and observe the following:
  - ♦ The files you copied to the iFolder are available in the browser.
  - ♦ By clicking a file link, you can automatically download and open the file, or you can save it to your desktop. After downloading and modifying a file, you can upload it and replace the original on the iFolder server.
  - ♦ Using the links above the files, you can create new folders, upload files, and delete a selected file from the server.

Changes made to iFolders on the server through browser connections are synchronized with the corresponding iFolders on workstation desktops the next time users log in.
- 5 Close the browser.
- 6 Continue with the next section, “Using NetStorage.”

### 11.5.3 Using NetStorage

- 1 Using your browser, log into NetStorage by using the following URL:  
  
`http://IP or DNS/netstorage`  
where *IP or DNS* is your OES 2 server’s IP address or DNS name.
- 2 Type `ncp_edir` as the *User Name* and the associated password in the *Password* field, then click *OK*.
- 3 In the left navigation frame, click *Home@EXAMPLE\_TREE*.
- 4 Click *File > Upload*.  
If you are prompted, enable pop-ups and repeat this step.
- 5 Click the *Browse* button and navigate to the *Shared Documents* folder, then select the first file and click *Open*.
- 6 Click the *Plus* sign (+) by the *Browse* button to add another field. Then click *Browse*, select the next file, and repeat this step until all four files are selected.
- 7 Click *Upload*.
- 8 Log in to the OES 2 server as the `root` user and click *Computer > Home Folder*.
- 9 Double-click *File System > home > ncp\_edir*.
- 10 Verify that the files you copied in NetStorage are on the server.
- 11 Right-click a file, select *Properties*, then click the *Permissions* tab and observe the following:
  - ♦ The *File Owner* is `root`.
  - ♦ The *File Group* is `root`.
  - ♦ *Group* and *Others* have no rights, reflecting the fact that the file is on an NCP™ volume.

Generally speaking, these POSIX permissions do not cause any problems. They do not affect NetStorage functionality for the user in this configuration because *Home@EXAMPLE\_TREE* is an NCP storage location object; NCP file and directory trustee assignments govern access, not POSIX permissions. If the user accesses the files through a Novell Client™, NCP assignments govern.
- 12 On the lab workstation, in NetStorage, click the *Linux\_Home\_Directories* storage location.

After a few moments, a message displays indicating that NetStorage cannot access the location. This is because the ncp\_edir user is not LUM-enabled and therefore has no SSH access to the server.

**13** Continue with the next section, [Exercises for nss\\_lum-edir](#).

## 11.6 Exercises for nss\_edir

- [Section 11.6.1, “What nss\\_edir Can Do,” on page 99](#)
- [Section 11.6.2, “Using NetStorage,” on page 99](#)

### 11.6.1 What nss\_edir Can Do

This user has the following service access:

**Table 11-5** *nss\_edir Service Access*

Service	Details	Explored for This User in This Guide
iFolder 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	No
Novell AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	See <a href="#">Section 11.10, “Macintosh Exercises and Novell AFP,” on page 104</a> .
Novell CIFS	Can access any NSS directory to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	Yes
NetStorage	Can access its home directory through NetStorage because all home directories created through iManager and stored as attributes in eDirectory are exposed through the HOME@EXAMPLE_TREE default storage location.	Yes
iPrint	Can install and use the printer made available in <a href="#">Chapter 9, “iPrint,” on page 79</a> .	No

### 11.6.2 Using NetStorage

- 1** Log in to the Windows workstation as the nss\_edir user.
- 2** When the iFolder wizard launches, click *Cancel*.
- 3** On the Windows workstation in your browser, log into NetStorage by using the following URL:

`http://IP or DNS/netstorage`

where *IP or DNS* is your OES 2 server's IP address or DNS name.

- 4 Type `nss_edir` as the *User Name*, type the associated password in the *Password* field, then click *OK*.
- 5 In the left navigation frame, click *Home@EXAMPLE\_TREE*.  
This share point links directly to the NSS home directory for the user that is specified in eDirectory.
- 6 Click *File > Upload*.  
If needed, allow the pop-up and repeat this step.
- 7 Click the *Browse* button and navigate to the *Shared Documents* folder, then select the first file and click *OK*.
- 8 Click the *Plus* sign (+) by the *Browse* button to add another field. Then click *Browse*, select the next file, and repeat this step until all four files are selected.
- 9 Click *Upload*.
- 10 Select `MyPrivateFile.txt`, then click *File > Rename* and rename the file to `junk.txt`.
- 11 Upload `MyPrivateFile.txt` again.
- 12 Right-click `junk.txt` and select *Delete*, then click *OK*.
- 13 Click *View > Show Deleted Files*.
- 14 Select `junk.txt`, then click *File > Undelete*.
- 15 Click *OK*.

Notice that the file is still displayed as a deleted file and an error is indicated in the lower left frame.

This is because NSS cannot track POSIX ownership of files for users that are not LUM-enabled. For more information, see “[Services That Do Not Require LUM-Enabled Access But Have Some LUM Requirements](#)” in the *OES 2 SP2: Planning and Implementation Guide*.

If `nss_edir` were using the Novell Client, the file could be salvaged through the client, but because we are not exploring the Novell Client in this version of the *Lab Guide*, this is a good place to look at a few of the administrative features for NSS volumes that are available to eDirectory Admin users through NetStorage.

- 16 Continue with the next section, [Administrative Tasks Available in NetStorage](#).

## 11.7 Administrative Tasks Available in NetStorage

- ♦ [Section 11.7.1, “Recovering the junk.txt File,” on page 100](#)
- ♦ [Section 11.7.2, “Setting Rights to TeamProjectReadOnly.txt,” on page 101](#)
- ♦ [Section 11.7.3, “Setting Rights to TeamProjectWrite.txt,” on page 101](#)

### 11.7.1 Recovering the junk.txt File

- 1 Log in to NetStorage as the eDirectory Admin user and browse to the `nss_edir` home directory.

- 2 Click *View > Show Deleted Files*.
- 3 Select `junk.txt`.
- 4 Click *File > Undelete*, then click *OK*.
- 5 Click *View > Refresh*.

The file has been fully recovered.

### 11.7.2 Setting Rights to TeamProjectReadOnly.txt

- 1 Right-click `TeamProjectReadOnly.txt` and select *Properties*.
- 2 Click *NetWare Rights*.
- 3 Click the *Browse* icon next to the blank field under the *Trustees* list.
- 4 Click *EXAMPLE\_TREE > COMPANY > LAB > USERS > AllUsers*.
- 5 Click the plus sign, then click the *NetWare Rights* tab again.

The AllUsers group members are now trustees of the `TeamProjectReadOnly.txt` file in the `nss_edir` home directory.

Notice the check boxes to the right of the AllUsers group, indicating that the group has Read and File Scan rights to the file.

- 6 Click *Apply > Close*.
- 7 Continue with [Setting Rights to TeamProjectWrite.txt](#).

### 11.7.3 Setting Rights to TeamProjectWrite.txt

- 1 If the previous file is still selected, deselect it. Right-click options are only available on single files and are prevented if multiple files are selected.
- 2 Right-click `TeamProjectWrite.txt` and select *Properties*.
- 3 Select *Rename Inhibit*, select *Delete Inhibit*, then click *Apply*.

The NSS file system is now set to prevent the file from being renamed or deleted by anyone, including `nss_edir`.

- 4 Click *NetWare Rights*.
- 5 Click the *Browse* icon next to the blank field.
- 6 Click *EXAMPLE\_TREE > COMPANY > LAB > USERS > LUMUsers*.
- 7 Click the plus sign (+), then click the *NetWare Rights* tab again.

The LUMUsers group members are now trustees of the `TeamProjectWrite.txt` file in the `nss_edir` home directory.

Notice the check boxes to the right of the LUMUsers group, indicating that the group has Read and File Scan rights to the file.

- 8 Assign the group the Write right by selecting the check box to the right of the first one that is checked (the Read check box).
- 9 Click *Apply > Close*.
- 10 Continue with the next section, [Exercises for nss\\_lum-edir](#).

## 11.8 Exercises for nss\_lum-edir

- ♦ [Section 11.8.1, “What nss\\_lum-edir Can Do,” on page 102](#)
- ♦ [Section 11.8.2, “Using Novell CIFS File Services,” on page 102](#)

### 11.8.1 What nss\_lum-edir Can Do

This user has the following service access:

**Table 11-6** *nss\_lum-edir Service Access*

Service	Details	Explored for This User in This Guide
iFolder 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	No
Novell AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	See <a href="#">Section 11.10, “Macintosh Exercises and Novell AFP,” on page 104.</a>
Novell CIFS	Can access any NSS directory to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	Yes
NetStorage	Can access its home directory through NetStorage because all home directories created through iManager are stored as attributes in eDirectory are made available through the HOME@EXAMPLE_TREE default storage location.	No
iPrint	Can install and use the printer made available in <a href="#">Chapter 9, “iPrint,” on page 79.</a>	No

### 11.8.2 Using Novell CIFS File Services

- 1 Log in to the Windows workstation as the nss\_lum-edir user.
- 2 When the iFolder wizard launches, click *Cancel*.
- 3 Open Windows Explorer or My Computer and click *Tools > Map Network Drive*.
- 4 Click the *Drive* drop-down list and select an unused drive letter.
- 5 In the *Folder* field, type the following:  

```
\\IP_or_DNS\home_nss.
```

where *IP\_or\_DNS* is the IP address or full DNS name of the OES 2 server.
- 6 Click *Finish*.

The system maps the drive and opens at the root of the HOME\_NSS volume.

Normally, only the nss\_lum-edir home directory would appear. However, because we granted rights to two files in the nss\_edir home directory, it also appears.

- 7 Open the nss\_edir home directory and notice that the two files are displayed, but the other files in nss\_edir are not.

This illustrates the granular access capabilities of NCP file services.

- 8 Open the TeamProjectReadOnly.txt file in a text editor, such as Notepad. Then change the file contents and try to save the changes.

You are prevented from doing anything except reading the file, including saving the file with a different name.

- 9 Open the TeamProjectWrite.txt file in the text editor. Then change the file contents and save the file.

- 10 Close the file and reopen it in the editor.

Your changes were saved because of the rights you have to the file.

- 11 Close the file and try to delete it.

Windows 2000 and some versions of Windows XP wrongly report that the file has been deleted. However, if you close the drive and reopen it, you will see that it is still there. See “[Windows XP SP2 Wrongly Reports File Deletion.](#)”

- 12 Continue with the next section, [Exercises for nw\\_edir.](#)

## 11.9 Exercises for nw\_edir

- ♦ [Section 11.9.1, “What nw\\_edir Can Do,” on page 103](#)
- ♦ [Section 11.9.2, “Using NetWare CIFS File Services,” on page 104](#)

### 11.9.1 What nw\_edir Can Do

This user has the following service access:

**Table 11-7** nw\_edir Service Access

Service	Details	Explored for This User in This Guide
iFolder 3.8	Can create and share its own iFolders and accept invitations from others to share their iFolders.	No
NetWare AFP	Can access any NSS directories to which it has rights.  Access rights to directories are governed by the NSS file system, allowing the user to only see and do what it has rights for.	No

Service	Details	Explored for This User in This Guide
NetWare CIFS	Because its home directory is on the virtualized NetWare server, this user has automatic CIFS/SMB access to the directory (assuming the configuration steps in <a href="#">Section 6.2, “Enabling NFAP Services on the LAB_NW Server,”</a> on <a href="#">page 68</a> are completed.)	Yes
NetStorage	Can access its home directory through NetStorage because all home directories created through iManager are stored as attributes in eDirectory are made available through the HOME@EXAMPLE_TREE default storage location.	No
iPrint	Can install and use the printer made available in <a href="#">Chapter 9, “iPrint,”</a> on <a href="#">page 79</a> .	No

## 11.9.2 Using NetWare CIFS File Services

- 1 Log in to the Windows workstation as the nw\_edir user.
- 2 When the iFolder wizard launches, click *Cancel*.
- 3 Open Windows Explorer or My Computer and click *Tools > Map Network Drive*.
- 4 Click the *Drive* drop-down list and select an unused drive letter.
- 5 In the *Folder* field, type the following:

```
\\IP_or_DNS\home_nw
```

where *IP\_or\_DNS* is the IP address or full DNS name of the LAB\_NW server.

---

**TIP:** After doing so many exercises involving the OES 2 Lab server, it is easy to use the wrong IP address or DNS name. Make sure you are accessing your virtualized NetWare server.

---

- 6 Click *Finish*.  
The system maps the drive and opens at the root of the HOME\_NW volume.
- 7 Navigate to the *Shared Documents* folder, then drag and copy the four files to the nw\_edir folder.
- 8 Continue with the next section, [Macintosh Exercises and Novell AFP](#).

## 11.10 Macintosh Exercises and Novell AFP

Most of the exercises you have performed in this guide can also be performed on a Macintosh workstation, so we will not repeat them.

OES 2 includes iPrint and iFolder clients for the Mac, and NetStorage and iFolder Web services work equally well on most browsers, including those on mobile devices.

Novell CIFS even works well with the Macintosh file sharing functionality.

To explore Novell AFP on your lab's Macintosh workstation, do the following:

- 1 While logged into the workstation, click the Finder, then click *Go > Connect to Server*.
- 2 In the Connect to Server dialog box, type the OES 2 server's IP address or DNS name, then click *Connect*.
- 3 Type an nss\* user's name and password and click *Connect*.

You should see the folders on the HOME\_NSS volume to which the user has access rights.

## 11.11 What's Next

Your lab is now set up and ready to use for building your experience with OES 2.

The exercises in this guide have highlighted only a few major points and features. There are numerous additional things worth exploration.

After you complete the exercises in this guide, we recommend that you do the following:

1. Think about the needs of your organization and how the various OES 2 product components can help you address those needs.
2. Think about your network users and their file and print service needs. Match them against the different user types created in this guide. Then take the opportunity to do some hands-on exploring of the access capabilities and limitations for the matching users. For example, set up and experiment with the privacy and collaboration capabilities for each user through both NCP and POSIX.
3. Begin planning your organization's eDirectory tree and the rollout of OES 2 services to your organization.

As you plan for, work with, and install OES 2, be sure to consult the other OES 2 product documentation mentioned in ["Using This Guide as a Reference" on page 10](#).

# Supplementary Information

# A

This section contains supplementary explanations and instructions.

- [Section A.1, “NSS Partitions, Pools, and Volumes,” on page 107](#)
- [Section A.2, “iManager Tomcat Error,” on page 109](#)

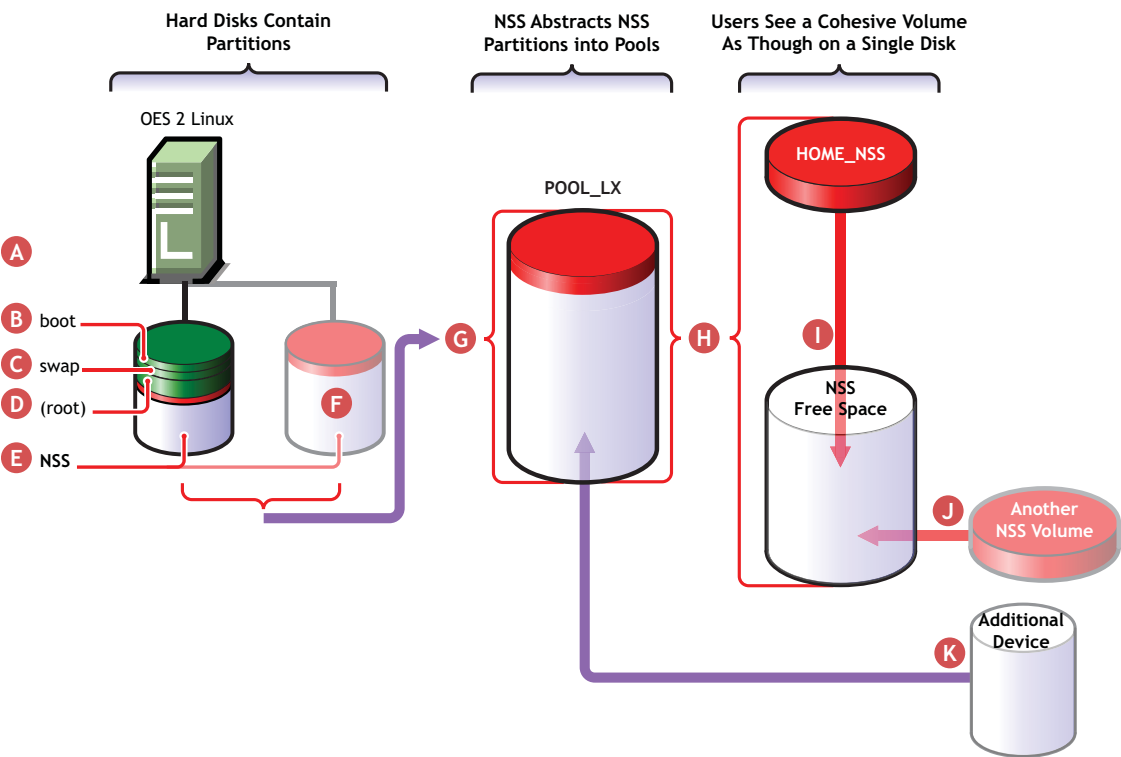

## A.1 NSS Partitions, Pools, and Volumes

For a complete discussion about NSS, refer to the *OES 2 SP2: NSS File System Administration Guide*.

This section presents the following:

- A quick overview of the three Linux partitions on your lab server
- A general overview of NSS partitions and the mechanisms that let you create NSS volumes on them

**Figure A-1** Partitions, Pools, and Volumes

Reference Letter	Explanation
A	Partitions are physical sections on a hard disk that are managed by a file system. The most common file systems on Linux servers today are Ext3 and Reiser.

Reference Letter	Explanation
B	The boot partition on your lab server is managed by the Reiser file system. The files and configuration data it contains start the server.
C	The swap partition is managed by a file system that swaps information between memory and the disk, thus augmenting the RAM installed in the server.
D	The / (root) partition on your server is managed by Reiser and stores all the lab server's system and data files, including OES services, eDirectory™, and so on.
E	<p>OES 2 servers can also include NSS partitions. These are similar to Linux partitions in that they occupy physical disk space, but they are also significantly different in a number of ways.</p> <ol style="list-style-type: none"> <li>1. You create the Linux partitions shown in this illustration during OES 2 installation.</li> </ol> <p>You always create NSS partitions after the OES installation is completed.</p> <ol style="list-style-type: none"> <li>2. You create Linux partitions by allocating an amount of disk space to the partition and assigning it a mount point, such as /boot, /home, or / (root).</li> </ol> <p>You create NSS partitions by creating an NSS pool (see G) and assigning space on the server's storage devices (physical or logical disks) to the pool. The space you assign to a given pool from a specific disk is designated on that disk as an NSS partition.</p> <ol style="list-style-type: none"> <li>3. On Linux, files are stored on a partition.</li> </ol> <p>On NSS, files are stored in an NSS volume—a logical mechanism that can span multiple NSS partitions and also the devices that contain them.</p> <ol style="list-style-type: none"> <li>4. On Linux, a partition is allocated a set amount of disk space on a single device. The amount of disk space that can be used is limited by the size of the partition.</li> </ol> <p>NSS volumes are not bound by individual partition or device sizes. Rather, they take disk space from their assigned NSS pool as needed.</p>
F	<ol style="list-style-type: none"> <li>1. Additional disk space can be dynamically added to NSS pools as needed, and NSS volumes can grow dynamically in return as long as there is free space available in the pool, unless the volume size has been restricted by an eDirectory Admin user.</li> </ol>
<p><b>IMPORTANT:</b> The illustration shows the NSS pool spanning NSS partitions on both the server's primary hard disk and a second hard disk, which could be added later. The NSS pool contains an NSS volume (HOME_NSS in this case) that contains the NSS volume data (illustrated in red). The NSS pool also has free space that is not yet allocated to a volume (illustrated in white).</p> <p>Free space and volume data aren't necessarily distributed across all partitions, or distributed evenly as the graphic might imply. The NSS file system manages what each partition contains, independent of any administrative controls.</p>	

Reference Letter	Explanation
<b>G</b>	<p>The NSS file system logically combines multiple partitions to form pools of space (up to 8 TB in size) that can span multiple devices.</p> <p>In the illustration, POOL_LX contains two NSS partitions that are created from the unformatted space on both hard disks when the pool is created.</p> <p>In some ways, NSS pools are like pools of water. The space from each partition is logically “poured” into an NSS pool and made available to the pool’s assigned volumes, such as HOME_NSS. Neither the volume nor the users with rights to access it know which physical partitions contain the disk space actually being used.</p> <p>Of course, the NSS file system continues to track each partition below the surface, but from a logical standpoint, all of the disk space assigned to a pool is one continuous source of disk space.</p>
<b>H</b>	<p>The sole purpose of NSS pools is to provide storage space from which you can form one or more NSS volumes.</p> <p>Your lab server contains a single NSS pool named POOL_LX with a single NSS volume named HOME_NSS. The pool’s free space is unallocated until used.</p>
<b>I</b>	<p>The instructions for creating the HOME_NSS volume leave the option set to have the volume grow to the pool size. As additional space is needed, the HOME_NSS volume automatically expands into the free space shown.</p>
<b>J</b>	<p>Free space in the pool is not reserved for the HOME_NSS volume; instead, space is allocated to HOME_NSS as needed. You can optionally add other volumes to the same pool and, in a sense, “overbook” the pool’s free space.</p>
<b>K</b>	<p>You can also grow the pool as needed by adding more NSS partitions to the pool.</p>

## A.2 iManager Tomcat Error

If you experience a Tomcat error when attempting to access iManager 2.7, the likely cause is a corrupted browser cookie. Clearing the browser cookies should solve the problem.

- 1 In Firefox, click *Tools > Clear Private Data*.
- 2 Select *Cookies*.
- 3 Deselect the other options.
- 4 Click *Clear Private Data Now*.

# Documentation Updates

# B

This section summarizes the changes made to this lab guide since the initial release of Novell® Open Enterprise Server 2.

## January 19, 2010

Chapter or Section Changed	Summary of Changes
Various.	Editing changes for SP2.

## December 17, 2009

Chapter or Section Changed	Summary of Changes
"Identifying the Files to Download" on page 12.	The media filenames for OES 2 SP2 now show SP2a to indicate that they are updated to resolve a problem with the NCP Server object, which involves Novell Clustering and has no impact on this guide.

## November 9, 2009

Chapter or Section Changed	Summary of Changes
Various.	Updated guide contents for OES 2 SP2.

## May 20, 2009

Chapter or Section Changed	Summary of Changes
"Identifying the Files to Download" on page 12.	<p>The media filenames for OES 2 SP1 Linux now show SP1b to indicate that they are updated for:</p> <ul style="list-style-type: none"><li>♦ Compatibility with all of the patches in the OES 2 update channel.</li><li>♦ Correction of a build problem with the SP1b media. See <a href="#">May 11, 2009</a>.</li></ul> <p>For more details, see TID 7003153 on the Novell Support site.</p>

## May 11, 2009

Chapter or Section Changed	Summary of Changes
"Identifying the Files to Download" on page 12.	The media filenames for OES 2 SP1 Linux now show SP1a to indicate that they are updated for compatibility with all of the patches in the OES 2 update channel.  For more details, see TID 7003153 on the Novell Support site.

## March 5, 2009

Chapter or Section Changed	Summary of Changes
"Creating a Storage Location Object in iManager" on page 86.	Clarified statements regarding Novell CIFS and SSH as used in the creation procedure. Corrected the protocol used to create the Storage Location Object from CIFS to SSH.
