About This Guide

This Quick Start explains how to install the Novell® Open Workgroup Suite Small Business Edition 2.0 (NOWS SBE 2.0) software on a server. For more complete planning, installation, and administration information, see <http://www.novell.com/documentation/nows/>.

- ♦ [Chapter 1, “Introduction,” on page 9](#)
- ♦ [Chapter 2, “Installing,” on page 11](#)
- ♦ [Chapter 3, “NOWS Components,” on page 15](#)

Audience

This document is for any user who wants a quick and simple aid to installing NOWS SBE 2.0. It also provides a brief overview of the components included with NOWS SBE 2.0.

Feedback

We want to hear your comments and suggestions about this manual and the other documentation included with this product. Please use the User Comments feature at the bottom of each page of the online documentation, or go to the Novell [documentation feedback site \(http://www.novell.com/documentation/feedback.html\)](http://www.novell.com/documentation/feedback.html) and enter your comments there.

Documentation Updates

For the most recent version of the *Quick Start*, visit the [Novell Open Workgroup Solution Small Business Edition documentation Web site \(http://www.novell.com/documentation/nows_sbe_20/index.html\)](http://www.novell.com/documentation/nows_sbe_20/index.html).

Additional Documentation

For more complete planning, installation, and administration information, see the [Novell Open Workgroup Solution Small Business Edition documentation Web site \(http://www.novell.com/documentation/nows_sbe_20/index.html\)](http://www.novell.com/documentation/nows_sbe_20/index.html).

Documentation Conventions

In Novell documentation, a greater-than symbol (>) is used to separate actions within a step and items in a cross-reference path.

A trademark symbol (®, ™, etc.) denotes a Novell trademark. An asterisk (*) denotes a third-party trademark.

When a single pathname can be written with a backslash for some platforms or a forward slash for other platforms, the pathname is presented with a backslash. Users of platforms that require a forward slash, such as Linux* or UNIX*, should use forward slashes as required by your software.

Introduction

1

This Quick Start explains how to install the Novell® Open Workgroup Suite Small Business Edition 2.0 software on a server. For more complete planning, installation, and administration information, see the [Novell Open Workgroup Solution Small Business Edition documentation Web site \(http://www.novell.com/documentation/nows/\)](http://www.novell.com/documentation/nows/). You install the software on a physical or virtual server, then configure the installation from a workstation and a Web browser. You need to make sure that your server is plugged into a network with a DHCP server installed. If your server is a DHCP server, another might not be available. You also need an Internet connection available to use.

To complete the installation, you need a server on which you can install a new operating system, a workstation, and a browser.

- ♦ [Section 1.1, “Server Requirements,” on page 9](#)
- ♦ [Section 1.2, “Desktop Operating System and Browser Requirements,” on page 9](#)

1.1 Server Requirements

The following server requirements are based on Open Enterprise Server (OES) requirements:

Table 1-1 *Server Requirements*

System Components	Minimum Requirements	Recommended Requirements
Server	Server-class computer with Pentium* II or AMD* K7 450 Mhz processor	Server-class computer with Pentium III, Pentium III Xeon*, Pentium 4, Intel* Xeon 700 Mhz, AMD* K8 CPUs (Athlon64* and Opteron*), Intel EM64T or higher processor
Memory	512 MB of RAM	1 GB of RAM
Free Disk Space	10 GB of unpartitioned disk space	Additional disk space might be required, depending on which OES components are selected and how they are used.

1.2 Desktop Operating System and Browser Requirements

Table 1-2 *Operating System and Browser Requirements*

Desktop Operating System	Browser # 1	Browser #2
Windows* 98		N/A
Windows 2000	I	Mozilla* Firefox* 1.5 or later

Desktop Operating System	Browser # 1	Browser #2
Windows XP	Internet Explorer 7 or later	Mozilla Firefox 1.5 or later
Windows Vista*	Internet Explorer 7 or later	Mozilla Firefox 1.5 or later
SUSE® Linux Desktop (SLED) 10	Mozilla Firefox	N/A
Mac OS* X	Mozilla Firefox for Macintosh*	N/A

- ♦ Section 2.1, “Preparing to Install,” on page 11
- ♦ Section 2.2, “Beginning the Installation,” on page 11
- ♦ Section 2.3, “Web Installation and Configuration,” on page 12
- ♦ Section 2.4, “Configuration and Administration,” on page 13

2.1 Preparing to Install

Verify that you have one disk with the Novell® Open Workgroup Suite Small Business Edition 2.0 installation files, or download the installation ISO from <http://download.novell.com> to a location of your choice and burn it to a DVD. The download is 5 GB. Download time depends on your hardware.

If you are using a VMware* session instead of a physical server, make sure to designate the boot sequence to boot from the CD-ROM.

2.2 Beginning the Installation

- 1 Insert the DVD into your chosen server.
- 2 Boot up the server. The installation splash screen then appears. Using the Down-arrow key, select *Installation*, then press Enter.
- 3 The first page is the End User License Agreement (EULA). Read through the agreement and click *I Agree* to advance to the next page.
- 4 After the initial files have been loaded onto the system, you are prompted to set up the initial configuration of your server on the Installation Settings window. You now have the following two options:
 - ♦ If you do not want to change any of the settings and choose to keep the defaults, just click the *Accept* button in the lower right corner of the window. A Confirm Installation screen appears; if you are satisfied with the default, click *Install*.
 - ♦ If you want to change any of the settings, click the *Change* button and select the setting you want to modify. Repeat this task until all changes are complete. If you are satisfied with your changes, click the *Accept* button in the lower right corner of the Installation Settings main window. A Confirm Installation screen appears; if you are satisfied with your changes, click *Install*.

IMPORTANT: Do not change the configurations on the Software settings. Doing so causes your install to fail.

- 5 On the Network Configuration page, if you want to change any of the network settings, click *Change* and select the setting you want to modify. If you do not want to make any changes, click *Next*.

You are then presented with an IP address at the server prompt so you can move to the browser-based portion of the installation and configuration. Make a note of the IP address; you need it to access the Web site where you continue the installation. You have now completed the base installation of the server.

If you receive an IP address of `https://127.0.0.1:8181` or `https://:8181` instead of a valid IP address, DHCP is not functioning. Complete the following steps:

- 1 Verify that you are connected to the network with your DHCP server.
- 2 Log in as `root` with a password `novell`.
- 3 Enter the following command: `/etc/init.d/network restart`

2.3 Web Installation and Configuration

After you finish the steps in [Section 2.2, “Beginning the Installation,” on page 11](#), the rest of the installation process is completed from a Web browser. Refer to [Section 1.2, “Desktop Operating System and Browser Requirements,” on page 9](#) for supported browsers.

- 1 Type the link supplied at the end of your server installation in your Web browser and press Enter to bring up the first page of the Web installation.
- 2 The first page you see on the NOWS SBE site is the End User License Agreement (EULA). Read through the agreement and click *I Agree* to advance to the next page.
- 3 The next page is Network Settings. Verify the settings or add the correct information.
 - ♦ The IP address should be from the initial setup of your server operating system. Verify that this is accurate.
 - ♦ The netmask and gateway should be changed to match that of your network.
 - ♦ The DNS entry should be the IP address of your DNS server.
 - ♦ The hostname should be the same as your server. Do not include special characters in the name of your server.
 - ♦ The Domain should match the name of your Internet domain name.
- 4 After you have entered the correct information, click *Next*.
- 5 After your network settings have been committed, you are advanced to the License Key page. Enter your contact e-mail address and the license keys that were provided to you, then click *Next*.
- 6 The next step automatically checks for updates to the system and components by means of the Internet. At this early stage, there should be no updates to retrieve. After the check is complete, click *Next*.
- 7 The User Information page is where you enter password information for the administrator login. You have two options on this page:
 - ♦ If you want to proceed with the Basic setup, enter a password for the NOWS Administrator, then click *Next*.
 - ♦ If you want to enter a separate password for the server admin, click *Advanced Mode*, enter a password for the NOWS Administrator and a password for the server, then click *Next*.

IMPORTANT: The difference between these two passwords is that the NOWS Administrator password enables you to add, remove, or configure components on your NOWS server from the NOWS Admin GUI. The server password is what you use to configure or update your server from the console. If you don't choose to make each password different, then the passwords are the same as the NOWS Administrator password you have chosen.

- 8 When you are at the Install Additional Components page, you can install some, all, or none of the components.
- ♦ If you choose to install none of the components at this time, you can add components from the NOWS Admin GUI later. The components have been grouped together with similar software types for easy location, often appearing in multiple locations.
 - ♦ If you choose not to install components, click *Next* and then on the Install Additional Components page, click *Next* again. On the Component Installation page, click *Install*. Click *Continue to Administration*. To log out, click the red button next to *You are logged in as*.
 - ♦ If you do choose to install components now, select components on the Install Additional Components page. Click *Continue to Administration* to begin the configuration of your chosen NOWS components.

See [Chapter 3, “NOWS Components,” on page 15](#) for basic information about NOWS SBE 2.0 components.

2.4 Configuration and Administration

This section assumes that you have completed [Section 2.2, “Beginning the Installation,” on page 11](#) and [Section 2.3, “Web Installation and Configuration,” on page 12](#).

- 1 Log in to the administration page with the username of `sbsadmin` and the password you chose during the installation.
- 2 Examine your options on the NOWS administration page.

Here, you can install, uninstall, configure, and update components. Help links are also here to assist you with questions about your new NOWS server.

In the Components panel, *Products and Services* enables you to view what you have installed. The *Add/Remove* link enables you to install and uninstall components. *Desktop Downloads* enables you and your user community to install products and services (such as collaboration tools or file and print services) for use on individual computers. *Help Links* assists you with questions about your NOWS server. Finally, *Management Links* provides access to other management consoles used to manage your NOWS environment.

From the administration page, you can also manage your server, environment, and users. Granting users access to NOWS Administration enables them to add desired resources to their desktop computers.

- 3 To log out, click the red button next to *You are logged in as*.
You return to the NOWS SBE login page.

- ♦ [Section 3.1, “Backup, Restore, and Recovery,” on page 15](#)
- ♦ [Section 3.2, “Business Applications,” on page 15](#)
- ♦ [Section 3.3, “Collaboration Groupware and Messaging,” on page 16](#)
- ♦ [Section 3.4, “File, Print, and Fax,” on page 16](#)
- ♦ [Section 3.5, “Security Management,” on page 17](#)
- ♦ [Section 3.6, “Systems Management,” on page 18](#)

3.1 Backup, Restore, and Recovery

This section lists tools you can use to back up and recover your network files for business security.

- ♦ [Section 3.1.1, “Personal File Backup \(iFolder\),” on page 15](#)
- ♦ [Section 3.1.2, “Network Backup \(Amanda\),” on page 15](#)

3.1.1 Personal File Backup (iFolder)

This component enables users to access and save files to a network location for the administrator to back up on a scheduled basis.

NOTE: You must have eDirectory™ and iManager installed before installing the iFolder component.

3.1.2 Network Backup (Amanda)

This component enables network administrators to back up their network files to tape for off-site or safe storage.

3.2 Business Applications

The business applications give your company a set of tools for word processing, spreadsheets, presentations, and database creation, as well as a network folder to back up your files.

- ♦ [Section 3.2.1, “OpenOffice,” on page 15](#)
- ♦ [Section 3.2.2, “Personal File Backup \(iFolder\),” on page 16](#)

3.2.1 OpenOffice

OpenOffice is an easy-to-use set of tools for word processing, spreadsheets, presentations, and database creation.

3.2.2 Personal File Backup (iFolder)

With iFolder, users are able to save to one location for easy backup of files and important documents.

NOTE: You must have eDirectory and iManager installed before installing the iFolder component.

3.3 Collaboration Groupware and Messaging

These tools assist your company in collaboration and communication. With e-mail, calendaring, instant messaging, and a networked file structure, your employees never need to worry about staying in touch and finding important documents.

- ◆ [Section 3.3.1, “E-Mail and Collaboration \(GroupWise\),” on page 16](#)
- ◆ [Section 3.3.2, “Personal File Backup \(iFolder\),” on page 16](#)

3.3.1 E-Mail and Collaboration (GroupWise)

GroupWise® is a set of tools that keeps your employees connected to clients and each other. The system comes with e-mail, calendaring, and instant messaging to be set up according to your company’s needs.

3.3.2 Personal File Backup (iFolder)

With iFolder, users can save to one location for easy backup of files and important documents.

NOTE: You must have eDirectory and iManager installed before installing the iFolder component.

3.4 File, Print, and Fax

This group of components gives your company a full set of tools for network printing and file sharing, as well as the ability to send and receive files on your desktop.

- ◆ [Section 3.4.1, “Personal File Backup \(iFolder\),” on page 16](#)
- ◆ [Section 3.4.2, “Print Services \(iPrint\),” on page 17](#)
- ◆ [Section 3.4.3, “Windows File and Print Sharing \(Samba\),” on page 17](#)
- ◆ [Section 3.4.4, “Fax Server \(HylaFAX\),” on page 17](#)

3.4.1 Personal File Backup (iFolder)

With iFolder, users can save to one location for easy backup of files and important documents.

NOTE: You must have eDirectory and iManager installed before installing the iFolder component.

3.4.2 Print Services (iPrint)

iPrint is a network printing service that allows everyone in a network to print to a centralized printer or printers. This saves money, because you won't need to purchase printers for each employee.

NOTE: You must have eDirectory and iManager installed before installing the iPrint component.

3.4.3 Windows File and Print Sharing (Samba)

The Samba file and print sharing service enables you to configure your network with the security of Linux, but still be able to access files on your Windows servers.

NOTE: You must have eDirectory and iManager installed before installing the Samba component.

3.4.4 Fax Server (HylaFAX)

This component gives your company the ability to send and receive faxes on your network. You no longer need a physical fax machine.

NOTE: eDirectory must be installed before installing the HylaFax component. You also need a modem and the appropriate configuration.

3.5 Security Management

The following components give your network a layer of security against viruses, spam, and unwanted intruders. You also receive a component that allows you to securely connect to your network when you aren't in the office.

- ♦ [Section 3.5.1, "Anti-Virus \(ClamAV\)," on page 17](#)
- ♦ [Section 3.5.2, "Firewall \(IPTables\)," on page 17](#)
- ♦ [Section 3.5.3, "VPN Server \(OpenVPN\)," on page 17](#)

3.5.1 Anti-Virus (ClamAV)

Anti-virus software that scans your network and your e-mail to secure you against viruses.

3.5.2 Firewall (IPTables)

A fully configurable firewall service used to keep out unwanted traffic and intruders.

3.5.3 VPN Server (OpenVPN)

Remote Access software to let you securely connect to your company files when you are away from the office.

NOTE: You must install the iptables component before installing OpenVPN.

3.6 Systems Management

These components assist you with managing your network and your desktops. They also include a Helpdesk component to initiate and track trouble tickets.

- ♦ [Section 3.6.1, “Directory Services \(eDirectory\),” on page 18](#)
- ♦ [Section 3.6.2, “Dynamic Local User \(PGINA\),” on page 18](#)
- ♦ [Section 3.6.3, “Helpdesk,” on page 18](#)
- ♦ [Section 3.6.4, “Management Tools \(iManager\),” on page 18](#)
- ♦ [Section 3.6.5, “Anti-Virus \(ClamAV\),” on page 18](#)
- ♦ [Section 3.6.6, “Spam Filter \(Mailscanner\),” on page 19](#)
- ♦ [Section 3.6.7, “DHCP,” on page 19](#)
- ♦ [Section 3.6.8, “DNS,” on page 19](#)
- ♦ [Section 3.6.9, “VPN Server \(OpenVPN\),” on page 19](#)
- ♦ [Section 3.6.10, “Remote Desktop \(TightVNC\),” on page 19](#)
- ♦ [Section 3.6.11, “Firewall \(IPTables\),” on page 19](#)

3.6.1 Directory Services (eDirectory)

This is the core of all rights and privileges in your NOWS network.

3.6.2 Dynamic Local User (PGINA)

With the Dynamic Local User component, you can synchronize the Novell Client™ with the Windows client so that login is seamless to your users.

NOTE: You must install eDirectory before you can install PGINA.

3.6.3 Helpdesk

This component helps your administrators track calls, and it gives your end users the ability to submit trouble tickets without picking up the phone.

NOTE: You must install eDirectory before you can install Helpdesk.

3.6.4 Management Tools (iManager)

This is a role-based tool for network and systems management in your environment.

NOTE: You must install eDirectory before you can install iManager.

3.6.5 Anti-Virus (ClamAV)

Anti-virus software to guard against malicious attacks via e-mail or other means.

3.6.6 Spam Filter (Mailscanner)

Anti-spam software to guard against malicious attacks via e-mail.

3.6.7 DHCP

Dynamic Host Configuration Protocol (DHCP) enables your server to provide IP addresses as clients need them instead of statically assigning them to the clients.

3.6.8 DNS

Dynamic Name Server (DNS) is a service used to link a common name to an IP address for easy location and searching of resources over TCP/IP.

3.6.9 VPN Server (OpenVPN)

Remote Access software to let you securely connect to your company files when you are away from the office.

NOTE: You must install the iptables component before installing OpenVPN.

3.6.10 Remote Desktop (TightVNC)

Gives your administrators the ability to remotely manage and assist end users with questions and tasks.

3.6.11 Firewall (IPTables)

Fully configurable firewall service used to keep out unwanted traffic and intruders.
