

ZENworks 11 SP4 Patch Management Airgap Solution

October 2016

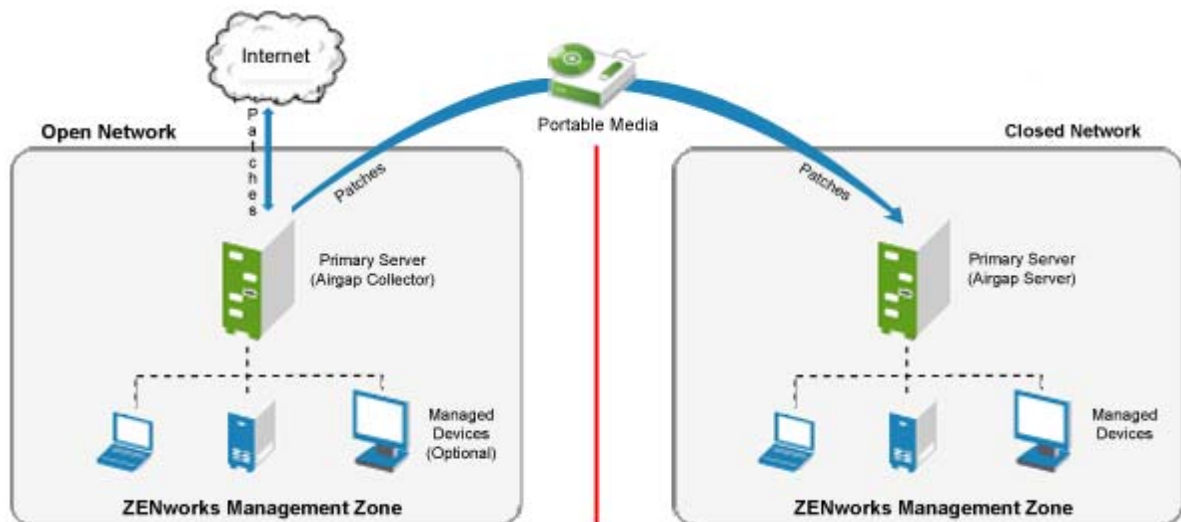

Novell

The Airgap solution for ZENworks Patch Management enables you to deliver patches to networks that are disconnected and isolated from the Internet. These networks are referred to as “airgapped” or “closed” networks.

- ◆ Section 1, “About the Airgap Solution,” on page 1
- ◆ Section 2, “Prerequisites,” on page 2
- ◆ Section 3, “Setting Up the Open Zone,” on page 2
- ◆ Section 4, “Setting Up the Closed Zone,” on page 8
- ◆ Section 5, “Transferring Patches from the Open Zone to the Closed Zone,” on page 10
- ◆ Section 6, “Legal Notices,” on page 10
- ◆ Section 7, “Third-Party Material,” on page 11

1 About the Airgap Solution

The Airgap solution requires two ZENworks Management Zones, one zone in the open (Internet-connected) network and one in the closed network. A Primary Server (referred to as the Airgap Collector) in the open zone receives patches through the subscription service. You then transfer the patches via portable media from the Airgap Collector to a Primary Server (referred to as the Airgap Server) in the closed zone. The Airgap Server deploys the patches to managed devices as if it had received them directly through the subscription service.

The ZENworks Management Zone in your open network can optionally include managed devices that you want to patch. The patches downloaded by the Airgap Collector are retained in the zone (in addition to being copied to a transfer directory) and can be deployed to managed devices within the open zone.

2 Prerequisites

- ♦ Two ZENworks Management Zones, one in the open network (*the Airgap Collector*) and another in the closed network (*the Airgap Server*).

ZENworks Servers must be at least version 11 SP4. For information about installing ZENworks, see the [ZENworks 11 SP4 Server Installation Guide](#).

- ♦ ZENworks Patch Management licensed in both zones, which includes a ZENworks Patch Management license for the Airgap Collector (open zone) and a ZENworks Patch Management Airgap license for the Airgap Server (closed zone). You cannot use an evaluation license.

NOTE: The Airgap license is a no-charge entitlement if you are a licensed ZENworks Patch Management customer with Maintenance. The license must be requested for you by your sales representative. After it has been requested, it is added to your ZENworks Patch Management entitlement in your Customer Center portal, and you add the license key to the Airgap Server using a system variable.

- ♦ Airgap Collector enabled prior to server replication or caching of patches on the Airgap Collector server.

3 Setting Up the Open Zone

Complete the following tasks to configure the ZENworks Management Zone in your open network:

- ♦ [Section 3.1, “Mirroring the Closed Zone’s Managed Devices,” on page 2](#)
- ♦ [Section 3.2, “Licensing ZENworks Patch Management,” on page 4](#)
- ♦ [Section 3.3, “Enabling the Airgap Collector,” on page 4](#)
- ♦ [Section 3.4, “Limiting the Patch Content Downloaded by the Subscription Service,” on page 6](#)
- ♦ [Section 3.5, “Starting the Subscription Service,” on page 6](#)

3.1 Mirroring the Closed Zone’s Managed Devices

When a ZENworks Primary Server downloads patches from the subscription service, it downloads the patch fingerprints, not the entire patch. A patch fingerprint contains metadata about which operating systems the patch applies to. The Primary Server compares the downloaded patch fingerprints against the operating systems of the zone’s managed devices and displays the applicable patches in the Patches list. You can then select the patches you want to cache to the Primary Server for distribution to your managed devices.

In the following example, only one managed device is registered in the zone and it is running Windows XP Professional Service Pack 3; therefore, the Patches list displays only the patches that apply to that Windows version (11 patches), enabling you to easily select the patches to cache.

CVE Identifier:

If possible, we recommend that you register devices in your open zone that mirror the operating systems of the closed zone's managed devices. This limits the Patches list to only those patches that are applicable for your closed zone's devices.

If you do not mirror your closed zone's devices in your open zone, the Patches list displays all patches, which in the following example totals 4,957 patches. In this case, you would either need to cache all patches or manually filter and cache only the patches that apply to devices in your closed zone.

CVE Identifier:

If you choose to mirror your closed zone's devices in your open zone, consider the following guidelines:

- ◆ In your closed zone, log in to ZENworks Control Center and review the Devices list. The list displays the operating system for each registered device.
- ◆ In your open zone, register devices that have the same operating systems as the ones displayed in your closed zone's Devices list.
- ◆ Registering a device in your open zone adds the device object to the zone. The device object is what is needed to automatically filter the Patches list to show applicable patches only. Once the device is registered in your open zone, it does not need to continue to contact the zone; if desired, you can re-register the device against your closed zone for management purposes. Optionally, you could retain the devices in your open zone and use the devices to test new patches.

3.2 Licensing ZENworks Patch Management

To activate your ZENworks Patch Management license, do the following:

- 1 Log in to the ZENworks Control Center for the zone in your open network.
- 2 Click **Configuration** in the navigation panel and scroll down in the **Configuration** page to locate **Licenses > Product Licensing**.
- 3 Click the **ZENworks 11 Patch Management** link, and select **Activate Product** in the Patch Management License panel.
- 4 Enter your Product Subscription Serial Number in the field provided, and click **Add**.

3.3 Enabling the Airgap Collector

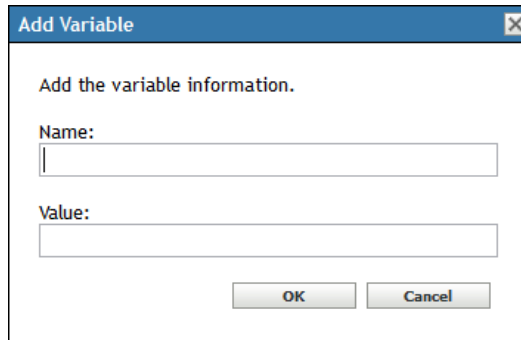

You enable the Airgap Collector by adding a `PATCH_AIRGAP_COLLECTOR=true` system variable to your ZENworks Management Zone.

- 1 Log in to ZENworks Control Center for the zone in your open network.
- 2 Click **Configuration > Device Management** (in the **Management Zone Settings** panel) > **System Variables** to display the System Variables list.

The screenshot shows the 'System Variables' configuration page in the ZENworks Control Center. The breadcrumb navigation is 'Configuration > System Variables'. Below the breadcrumb is a search bar and a close button. The main content area is titled 'System Variables' and contains a table with columns 'Name' and 'Value'. The table has one row with the name 'com.novell.zenworks.zone.guid' and the value '4972467b6c147b6d003413ba7b6745b3'. Below the table are buttons for 'Add', 'Remove', and 'Edit'. At the bottom of the page are buttons for 'OK', 'Apply', 'Reset', and 'Cancel'.

Name	Value
<input type="checkbox"/> com.novell.zenworks.zone.guid	4972467b6c147b6d003413ba7b6745b3

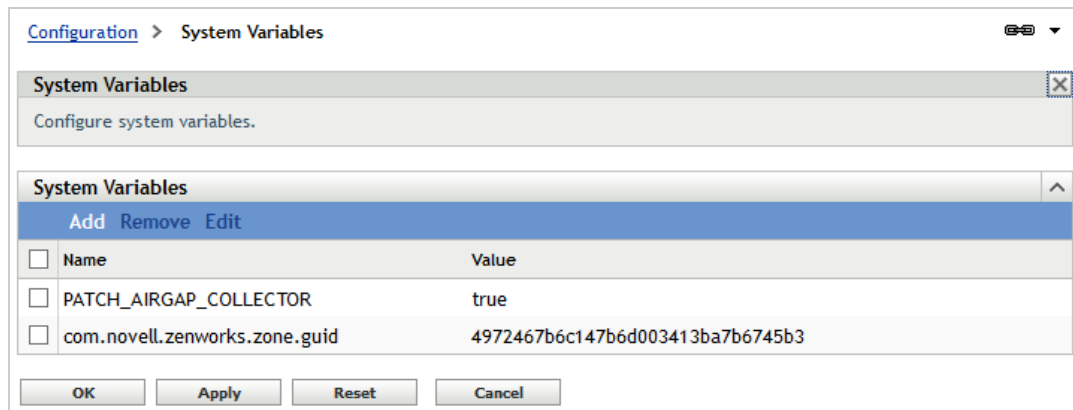

- 3 Click **Add** to display the Add Variable dialog box.

The 'Add Variable' dialog box contains the following fields and buttons:

- Title: Add Variable
- Instruction: Add the variable information.
- Field: Name: []
- Field: Value: []
- Buttons: OK, Cancel

- 4 Fill in the following fields:
Name: PATCH_AIRGAP_COLLECTOR
Value: true
- 5 Click **OK** to add the variable to the list.

The 'System Variables' configuration window shows the following details:

- Path: Configuration > System Variables
- Section: System Variables
- Instruction: Configure system variables.
- Table of System Variables:

<input type="checkbox"/>	Name	Value
<input type="checkbox"/>	PATCH_AIRGAP_COLLECTOR	true
<input type="checkbox"/>	com.novell.zenworks.zone.guid	4972467b6c147b6d003413ba7b6745b3

Buttons: OK, Apply, Reset, Cancel

- 6 Click **OK** to save the list.

3.4 Limiting the Patch Content Downloaded by the Subscription Service

Because you will be copying patches from your open zone (Airgap Collector) to your closed zone (Airgap Server), you should limit patch content downloads to the platforms, languages, and vendors your devices need. This reduces the amount of portable disk space required and speeds up the copy process.

- 1 In ZENworks Control Center, click **Configuration > Patch Management** (in the **Management Zone Settings** panel) > **Subscription Service Content Download** to display the content download settings.

The screenshot shows the 'Subscription Service Content Download' configuration page. At the top, there is a breadcrumb trail: 'Configuration > Subscription Service Content Download'. Below this is a title bar with 'Subscription Service Content Download' and a close button. The main content area is titled 'Patch subscription content download settings'. It contains two sections: 'Subscription Service Content Download' and 'Choose your language options for Windows operating systems'. The first section has a heading 'Select the platforms to download' with three checked checkboxes: 'Windows', 'Linux', and 'Mac'. Below this is the 'RPM dependency' section with a note 'Note: This option is performance intensive.' and an unchecked checkbox 'Resolve all RPM dependencies'. The second section has a heading 'Choose your language options for Windows operating systems' and a paragraph: 'These languages are for Operating Systems prior to Vista and other third party patches. For the best performance results select only the languages used by your organization.' Below this are ten language options with checkboxes: 'English' (checked), 'Portuguese (Brazil)', 'French', 'Italian', 'German', 'Japanese', 'Korean', 'Traditional Chinese', 'Simplified Chinese', and 'Hong Kong Chinese'.

- 2 In the **Select the platforms to download** list, deselect any platforms that do not apply to devices in your closed zone.
- 3 If Windows is one of the platforms for which to download patches, select the languages you want to download.
- 4 Click **OK** to save your patch download settings.

NOTE: You can also configure the **Select vendors to use in the system** list to limit the number of vendor patches to only those that are required. However, the list is not populated until the first subscription update is complete after starting the Subscription Service. The Airgap Collector content will not reflect a change in this setting until another subscription download completes after configuring and saving the list.

3.5 Starting the Subscription Service

To ensure that you have all the required patches for your closed zone, you need to start the Subscription Service and wait for the subscription download to successfully complete. You can verify this in the Subscription Service History panel on the Patch Management Dashboard.

Information about caching patches after the subscription download completes is provided in Section 5 [Transferring Patches from the Open Zone to the Closed Zone](#).

IMPORTANT: Ensure that you [enable the Airgap Collector](#) before starting the subscription service or caching of patches. Otherwise, you may have missing patches for the Airgap Server.

To start the Subscription Service and initiate the patch download:

- 1 In ZENworks Control Center, click **Configuration > Patch Management** (in the **Management Zone Settings** panel) > **Subscription Service Settings** to display the Subscription Service Settings page.

The screenshot shows the 'Subscription Service Settings' page in ZENworks Control Center. The page is titled 'Configuration > Subscription Service Settings' and includes a close button. Below the title bar, there is a section for 'Subscription Service Settings' with a description: 'ZPM server with any HTTP proxy and 3rd party subscription settings'. This section contains several fields and buttons: 'Start the Subscription Service' (a dropdown menu set to 'Select One' and a 'Start Service' button), 'Last Subscription Poll', 'Subscription Replication Status', 'Subscription Host', and 'Subscription Communication Interval(Every Day at)' (a dropdown menu set to '00:00' and an 'Update Now' button). At the bottom of this section are two buttons: 'Reset ZENworks Patch Management Settings' and 'Reset Subscription Service'. Below this is the 'HTTP Proxy Server Details' section, which includes input fields for 'Proxy Host', 'Port', and 'Http Credential' (with a search and clear icon). The next section is 'Patch Subscription Credentials', which has two sub-sections: 'RedHat Network Credentials' and 'SUSE Network Credentials', each with an input field and search/clear icons. At the bottom of the page are four buttons: 'OK', 'Apply', 'Reset', and 'Cancel'.

- 2 In the **Start the Subscription Service** list, select the ZENworks Primary Server, then click **Start Service** to start the subscription service on the Primary Server.
- 3 Click the **Update Now** button to initiate an immediate request for patches from the subscription service.
The initial subscription service request will take some time to process. You can use the Patch Management Dashboard (**Patch Management > Dashboard** tab) to monitor the request status.
- 4 By default, the Airgap Collector contacts the subscription service for patch updates at midnight each day. If desired, you can use the **Subscription Communication Interval** field to change the daily time.
- 5 Click **OK** to save your changes and exit the Subscription Service Settings page.

4 Setting Up the Closed Zone

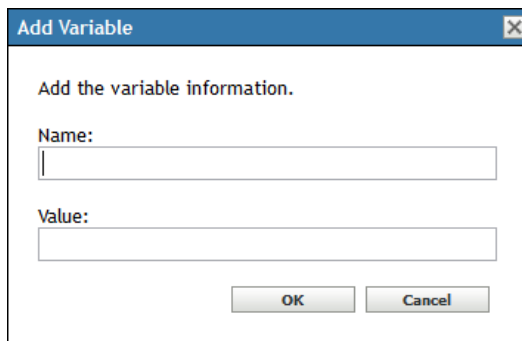

In your closed network, you need to configure the ZENworks Management Zone to enable the Primary Server to act as an Airgap Server. When you transfer downloaded patches from your open network to the closed network, the Airgap Server pulls them into the ZENworks Management Zone as if it had received them directly through the subscription service. You then deliver the patches using the standard ZENworks Patch Management methods.

To set up the closed zone:

- 1 Log in to ZENworks Control Center for the zone in your closed network.
- 2 Enable the Airgap Server by adding several system variables:
 - 2a Click **Configuration > Device Management** (in the **Management Zone Settings** panel) > **System Variables** to display the System Variables list.

- 2b Click **Add** to display the Add Variable dialog box.

- 2c Fill in the following fields:
 - Name:** PATCH_AIRGAP_SERVER
 - Value:** true
 - 2d Click **OK** to add the variable to the list.
 - 2e Repeat to add the following two variables:
 - ♦ **Name:** PATCH_AIRGAP_LICENSE
 - Value:** The Airgap license key you received from your Sales Representative.

NOTE: This step validates licensing on the Airgap Server for the closed network. You do not need to activate a ZENworks Patch Management license for this zone in Product Licensing.

◆ **Name:** PATCH_AIRGAP_PATH

Value: The directory path from which the Airgap Server will retrieve the patches you've transferred from the open network (the Airgap Collector) to your closed network. For example:

c:\program files (x86)\novell\zenworks\zpm\airgap\cdn

or

/opt/novell/zenworks/zpm/airgap.

2f Click **OK** to save the list.

3 Start the Subscription Service:

3a Click **Configuration > Patch Management** (in the **Management Zone Settings** panel) > **Subscription Service Settings** to display the Subscription Service Settings page.

The screenshot shows the 'Subscription Service Settings' page. At the top, there is a breadcrumb trail: 'Configuration > Subscription Service Settings'. Below this is a header section titled 'Subscription Service Settings' with a subtitle 'ZPM server with any HTTP proxy and 3rd party subscription settings'. The main content area is divided into several sections: 1. 'Subscription Service Settings' (expandable): Contains 'Start the Subscription Service' (a dropdown menu set to 'Select One' and a 'Start Service' button), 'Last Subscription Poll', 'Subscription Replication Status', 'Subscription Host', and 'Subscription Communication Interval(Every Day at)' (a dropdown menu set to '00:00' and an 'Update Now' button). There are also 'Reset ZENworks Patch Management Settings' and 'Reset Subscription Service' buttons. 2. 'HTTP Proxy Server Details' (expandable): Contains 'Proxy Host', 'Port', and 'Http Credential' (with a search icon and a close icon). 3. 'Patch Subscription Credentials' (expandable): Contains 'RedHat Network Credentials' and 'SUSE Network Credentials', each with a search icon and a close icon. At the bottom of the page are four buttons: 'OK', 'Apply', 'Reset', and 'Cancel'.

3b In the **Start the Subscription Service** list, select the ZENworks Primary Server, then click **Start Service** to start the subscription service on the Primary Server.

3c Click **OK** to exit the Subscription Service Settings page.

5 Transferring Patches from the Open Zone to the Closed Zone

To transfer patches from the open zone to the closed zone:

- 1 On the Airgap Collector in the open zone:
 - 1a (Optional) Make sure you have the latest patches. To do so, click **Configuration > Patch Management** (in the **Management Zone Settings** panel) > **Subscription Service Settings** to display the Subscription Service Settings page. Click the **Update Now** button to initiate an immediate request for patches from the subscription service.

Patches are updated daily at the time specified in the Subscription Service Settings. You only need to manually update if you want to ensure that you have any patches that might have been released since your last scheduled update. Use the Patch Management Dashboard (**Patch Management > Dashboard** tab) to monitor the status of the patch update.
 - 1b Cache all patches that you want to copy. To do so, click **Patch Management > Patches** to display the patch list. Select the patches you want to cache, click **Actions > Update Cache**.

If you chose not to mirror your closed zone's devices in your open zone (see [Section 3.1, "Mirroring the Closed Zone's Managed Devices," on page 2](#)), the **Patches** list does not display any applicable patches. In this case, deselect the **Not Patched** option in the Search box and click **Search** to display all available patches. Use this list to select the patches you want to cache. You will also need to do this if you mirrored some but not all of your closed zone's devices.
 - 1c After caching of the selected patches is complete, copy all contents (files and folders) from the following folder to your portable media:

Windows Airgap Server: `c:\program files (x86)\novell\zenworks\zpm\airgap`
Linux Airgap Server: `/opt/novell/zenworks/zpm/airgap`
- 2 On the Airgap Server in the closed zone, copy the patch content from the portable media to the Airgap directory you specified with the `PATCH_AIRGAP_PATH` variable when setting up the Airgap Server (see [Step 2e on page 8](#)).

If you have previously copied patch content to the Airgap Server, do not remove that content. Add the new patch content to the existing content.
- 3 Log in to ZENworks Control Center for the Airgap Server zone (in your closed network).
- 4 Click **Configuration > Patch Management** (in the **Management Zone Settings** panel) > **Subscription Service Settings > Update Now** to initiate an immediate patch content update.

The subscription service request will take some time to process. You can use the Patch Management Dashboard (**Patch Management > Dashboard** tab) to monitor the request status.
- 5 After the subscription service request completes, go to the Patches tab (**Patch Management > Patches** tab) to check the device status for each patch.
- 6 Deploy the patches. If necessary, see the [ZENworks 11 SP4 Patch Management Reference](#).
