SECURITY AND IDENTITY MANAGEMENT SOLUTIONS
SOLUTION FLYER

Novell® Solutions for Healthcare

The healthcare industry is under intense pressure to control skyrocketing costs, improve the quality of patient care and comply with government regulations to guarantee the privacy of patient information. Novell is helping healthcare organizations meet these business goals with identity-based solutions that simplify access to information and provide interoperability across the enterprise—all while ensuring security.

“We reviewed the market, but Novell came to us with a comprehensive suite of products. We didn't have to look elsewhere to get a complete solution. At the end of the day, we're a hospital and technology should not be daunting for people who are hands-on patient care givers.”

Steve Banyai

CIO

Bridgepoint Health

Tackling Healthcare Challenges

Today, healthcare organizations are forced to address multiple business challenges concurrently:

- *Balancing the need for easy access to information with the need for the privacy and security of patient information*
- *Enhance patient care in an environment in which budget pressures are forcing organizations to do more with less*
- *Utilize new technologies to move from paper-based to electronic health-record systems*

Targeted Healthcare Solutions

Novell has developed innovative, cost-effective solutions for network integration, automation and security that are helping healthcare organizations meet business challenges:

- *Clinical Workstation*
- *Identity Management*
- *Single Sign-on*

- *Context Management*
- *Audit and Reporting*
- *Desktop and Server Management*
- *Password Self-service*
- *SUSE® Linux® Platform*
- *Strategic Healthcare Workshops*
- *Consulting, Training and Technical Services*

Novell Clinical Workstation

Novell Clinical Workstation is a flexible solution framework that can be configured to meet the unique workflows and wide range of technology platforms found in healthcare organizations. The Novell solution provides fast, secure, role-based and location-based single sign-on access to key clinical and business applications. All of these give healthcare organizations the capability to deliver next-generation clinical desktops on a variety of devices.

Novell Identity Management

The award-winning Novell Identity Management solution automates the creation, update, deletion and management of identities across all systems. It enables healthcare organizations to create a single identity for each patient, medical professional, administrator, business partner and even medical assets. (After all, identity involves more than people.) As soon as an identity is created, either by an administrator or through self-service provisioning, it automatically provides access to applications, services and information that users need based on their roles—all while creating an audit trail. This eliminates delays that could interfere with the prompt delivery of quality care and regulatory compliance.

Novell SUSE Linux platform

Novell Linux Desktop, powered by SUSE Linux, is a desktop operating system and office-productivity environment that enables organizations to use Linux and open source with confidence. Novell Linux Desktop can be tailored to fit general-purpose, fixed-function or special-purpose roles such as shared workstations and kiosks.

SUSE Linux Enterprise Server provides comprehensive functionality to power today's networks and meet user demands in a scalable, high-performance foundation for secure enterprise computing. The system is built for reliability and supports a broad range of hardware platforms and leading software applications that empower businesses to leverage linux and open source for edge infrastructure, application hosting, and enterprise databases.

Companies can confidently realize the security, economy, performance and freedom of an open source desktop platform, knowing it comes from Novell. Novell brings a complete enterprise software ecosystem to Linux—providing technical support, training, education, consulting and extended partner network.

Strategic Healthcare Workshops

Novell knows that planning is the key to success for every client, and we work side-by-side with you every step of the way. Our Strategic Healthcare Workshops are designed to discover your needs, help educate, assess your current status and infrastructure and plan a solution to fit your individual situation.

Novell Consulting, Training and Technical Services

Whether your implementation or initiative requires strategic, project management, IT consulting, training, technical support or managed services to ensure you meet your business objective while delivering the highest-possible return on investment, Novell is here to help.

Solving Your Business Challenges
