About This Guide

This *ZENworks Management Zone Settings Reference* contains information about Management Zone settings that let you control a wide range of functionality for your zone. The guide includes the following sections:

- ♦ Chapter 1, “Accessing Configuration Settings,” on page 7
- ♦ Chapter 2, “Content Settings,” on page 11
- ♦ Chapter 3, “Device Management Settings,” on page 13
- ♦ Chapter 4, “Discovery and Deployment Settings,” on page 15
- ♦ Chapter 5, “Event and Messaging Settings,” on page 17
- ♦ Chapter 6, “Infrastructure Management Settings,” on page 19
- ♦ Chapter 7, “Inventory Settings,” on page 21
- ♦ Chapter 8, “Asset Management Settings,” on page 23
- ♦ Chapter 9, “Service Desk Registration Settings,” on page 25
- ♦ Chapter 10, “Endpoint Security Management Settings,” on page 27
- ♦ Chapter 11, “Patch Management Settings,” on page 29
- ♦ Chapter 12, “Audit Management,” on page 31
- ♦ Chapter 13, “Telemetry Settings,” on page 33
- ♦ Chapter 14, “Push Notifications,” on page 35

Audience

This guide is intended for ZENworks administrators.

Feedback

We want to hear your comments and suggestions about this manual and the other documentation included with this product. Please use the User Comments feature at the bottom of each page of the online documentation.

Additional Documentation

ZENworks is supported by other documentation (in both PDF and HTML formats) that you can use to learn about and implement the product. For additional documentation, see the [ZENworks documentation Web site](#).

Contents

About This Guide	3
1 Accessing Configuration Settings	7
1.1 Modifying Configuration Settings at the Zone	7
1.2 Modifying Configuration Settings on a Folder	8
1.3 Modifying Configuration Settings on a Device	8
2 Content Settings	11
3 Device Management Settings	13
4 Discovery and Deployment Settings	15
5 Event and Messaging Settings	17
6 Infrastructure Management Settings	19
7 Inventory Settings	21
8 Asset Management Settings	23
9 Service Desk Registration Settings	25
9.1 Register Service Desk Server	25
10 Endpoint Security Management Settings	27
11 Patch Management Settings	29
12 Audit Management	31
13 Telemetry Settings	33
14 Push Notifications	35

1 Accessing Configuration Settings

Management Zone settings that apply to devices are inherited by all devices in the zone. You can override zone settings by configuring them on device folders or on individual devices. This allows you to establish zone settings that apply to the largest number of devices and then, as necessary, override the settings on folders and devices.

By default, your zone settings are preconfigured with values that provide common functionality. You can, however, change the settings to best adapt them to the behavior you need in your environment.

- ♦ [Section 1.1, “Modifying Configuration Settings at the Zone,” on page 7](#)
- ♦ [Section 1.2, “Modifying Configuration Settings on a Folder,” on page 8](#)
- ♦ [Section 1.3, “Modifying Configuration Settings on a Device,” on page 8](#)

1.1 Modifying Configuration Settings at the Zone

- 1 In ZENworks Control Center, click the **Configuration** tab.
- 2 In the Management Zone Settings panel, click the settings category (**Content**, **Device Management**, **Discovery and Deployment**, **Event and Messaging**, and so forth) whose settings you want to modify.
- 3 Click the setting to display its details page.
- 4 Modify the setting as desired.

For information about the settings, click the **Help** button in ZENworks Control Center or see the following sections:

- ♦ [“Content Settings” on page 11](#)
 - ♦ [“Device Management Settings” on page 13](#)
 - ♦ [“Discovery and Deployment Settings” on page 15](#)
 - ♦ [“Event and Messaging Settings” on page 17](#)
 - ♦ [“Infrastructure Management Settings” on page 19](#)
 - ♦ [“Inventory Settings” on page 21](#)
 - ♦ [“Asset Management Settings” on page 23](#)
 - ♦ [“Service Desk Registration Settings” on page 25](#)
 - ♦ [“Endpoint Security Management Settings” on page 27](#)
 - ♦ [“Audit Management” on page 31](#)
 - ♦ [“Patch Management Settings” on page 29](#)
 - ♦ [“Telemetry Settings” on page 33](#)
 - ♦ [“Push Notifications” on page 35](#)
- 5 When you have finished modifying the setting, click **OK** (or **Apply**) to save your changes.
If the configuration setting applies to devices, the setting is inherited by all devices in the zone unless the setting is overridden at a folder level or a device level.

By default, Management Zone settings are cached on the ZENworks Server and the cache is updated every 10 minutes. Because of this, if a change is made to a zone setting, devices don't receive the changes until the next cache update, which might be as long as 10 minutes.

If you change any of these settings and you want to apply them immediately to a device, you must use the `zac` command line utility on the device to bypass the ZENworks Server cache and retrieve the new settings. To do so, run the following command on the device:

```
zac ref general bypasscache
```

1.2 Modifying Configuration Settings on a Folder

- 1 In ZENworks Control Center, click the **Devices** tab.
- 2 In the Devices panel (on the **Managed** tab), browse for the folder whose settings you want to modify.
- 3 When you find the folder, click **Details** next to the folder name to display the folder's details.
- 4 Click the **Settings** tab.
- 5 In the Settings panel, click the settings category (**Content**, **Device Management**, **Infrastructure Management**, and so forth) whose settings you want to modify.
- 6 Click the setting to display its details page.
- 7 Modify the setting as desired.

For information about the setting, click the **Help** button in ZENworks Control Center or see the following sections:

- ♦ [“Content Settings” on page 11](#)
 - ♦ [“Device Management Settings” on page 13](#)
 - ♦ [“Discovery and Deployment Settings” on page 15](#)
 - ♦ [“Event and Messaging Settings” on page 17](#)
 - ♦ [“Infrastructure Management Settings” on page 19](#)
 - ♦ [“Inventory Settings” on page 21](#)
 - ♦ [“Asset Management Settings” on page 23](#)
 - ♦ [“Service Desk Registration Settings” on page 25](#)
 - ♦ [“Endpoint Security Management Settings” on page 27](#)
 - ♦ [“Audit Management” on page 31](#)
 - ♦ [“Patch Management Settings” on page 29](#)
 - ♦ [“Telemetry Settings” on page 33](#)
 - ♦ [“Push Notifications” on page 35](#)
- 8 When you have finished modifying the setting, click **OK** (or **Apply**) to save your changes.

The configuration setting is inherited by all devices in the folder, including any devices contained in subfolders, unless the setting is overridden on a subfolder or individual device.

1.3 Modifying Configuration Settings on a Device

- 1 In ZENworks Control Center, click the **Devices** tab.
- 2 In the Devices panel (on the **Managed** tab), browse for the device whose settings you want to modify.

- 3 When you find the device, click the device name to display the its details.
- 4 Click the **Settings** tab.
- 5 In the Settings panel, click the settings category (**Content**, **Device Management**, **Infrastructure Management**, and so forth) whose settings you want to modify.
- 6 Click the setting to display its details page.
- 7 Modify the setting as desired.

For information about the setting, click the **Help** button in ZENworks Control Center or see the following sections:

- ♦ [“Content Settings” on page 11](#)
- ♦ [“Device Management Settings” on page 13](#)
- ♦ [“Discovery and Deployment Settings” on page 15](#)
- ♦ [“Event and Messaging Settings” on page 17](#)
- ♦ [“Infrastructure Management Settings” on page 19](#)
- ♦ [“Inventory Settings” on page 21](#)
- ♦ [“Asset Management Settings” on page 23](#)
- ♦ [“Service Desk Registration Settings” on page 25](#)
- ♦ [“Endpoint Security Management Settings” on page 27](#)
- ♦ [“Audit Management” on page 31](#)
- ♦ [“Patch Management Settings” on page 29](#)
- ♦ [“Telemetry Settings” on page 33](#)
- ♦ [“Push Notifications” on page 35](#)

- 8 When you have finished modifying the setting, click **OK** (or **Apply**) to save your changes.

2 Content Settings

The Content section contains the following settings:

Content Blackout Schedule: Define times when content (bundles, policies, configuration settings, and so forth) is not delivered to devices. For more information, see [Content Blackout Schedule](#).

Content Replication: Determine how often content (bundle and policy files) is updated on the ZENworks Primary Servers and Satellites. For more information, see [Content Replication](#).

Primary Server Replication: Lets you specify whether or not new Primary Servers added to the Management Zone include or exclude the content and lets you include or exclude a content server.

Satellite Server Replication: Lets you specify whether or not new Satellite devices added to the Management Zone include or exclude the content and lets you include or exclude a content server.

NOTE: Content Settings are not applicable for mobile devices.

3 Device Management Settings

The Device Management section contains the following settings:

Local Device Logging: Configure logging of messages to a managed device's local drive. You can determine what severity level messages are logged and when the log file is backed up. You can also determine what severity level messages are sent to the ZENworks server for viewing in ZENworks Control Center. For more information, see [Local Device Logging](#).

Device Refresh Schedule: Specify how often a device contacts a ZENworks Server to update bundle, policy, configuration, and registration information. You can also specify what to do with a device when it has not contacted a ZENworks Server within a certain number of days.

ZENworks Agent: Configure uninstall and caching settings for the ZENworks Agent as well as enable or disable specific Agent modules. For more information, see [ZENworks Agent](#).

System Update Agent: Configure System Update behavior on ZENworks Agents. For more information, see [System Update Agent](#).

Registration: Control the settings used when registering devices, including how registered devices are named, whether registration rules are enabled, and whether device objects in ZENworks Control Center can be renamed as they update their registration information. For more information, see [Registration](#).

ZENworks Explorer Configuration: Configure common settings for ZENworks Explorer component of the ZENworks Agent. You can select whether or not you want a bundle to be uninstalled after it is no longer assigned to a device or the device's user. You can also rename the default folder in Windows Explorer, on the Start menu, and in the ZENworks Window where all bundles are placed. For more information, see [ZENworks Explorer Configuration](#).

System Variables: Define variables that can be used to replace paths, names, and so forth as you enter information in ZENworks Control Center. For more information, see [System Variables](#).

Preboot Services: Configure settings for devices that use Preboot Services. For more information, see [Preboot Services](#).

Primary User: Determine how and when a device's primary user is calculated. For more information, see [Primary User](#).

Primary Workstation: Determine how and when a device's primary workstation is calculated. You can also disable the calculation by selecting the **None (Do not calculate, this affects both Primary Workstation and Primary User)** option. For more information, see [Primary Workstation](#).

Dynamic Group Refresh Schedule: Determine how often a dynamic group's criteria are applied to devices in order to update membership in the group. Membership in a dynamic group is determined by applying the dynamic group's criteria to devices. If a device meets the criteria, it is added to the group; you cannot manually add devices to a dynamic group or remove them from a dynamic group. For more information, see [Dynamic Group Refresh Schedule](#).

Wake-on-LAN: Configure the number of retry attempts to wake up a device and the time interval between the retry attempts. For more information, see [Wake-on-LAN](#).

Remote Management: Configure Remote Management settings, which are a set of rules that determine the behavior or the execution of the Remote Management service on the managed device. For more information, see [Remote Management](#).

NOTE: Local Device Logging, Device Refresh and Removal Schedule, and Dynamic Group Refresh Schedule are the only settings that are applicable for mobile devices as well.

4 Discovery and Deployment Settings

The Discovery and Deployment section contains the following settings:

Advertised Discovery Settings: Specify how often you want your ZENworks system to attempt to discover devices on your network that have the ZENworks pre-agent installed. For more information, see [Advertised Discovery Settings](#).

Discovery: Control the settings used during the discovery processes, including the maximum number of discovery requests that can be running at one time and the technologies to use for the discovery. You can also specify IP and SNMP settings used by the WMI (Windows Management Instrumentation) and SNMP discovery technologies. For more information, see [Discovery](#).

Windows Proxy: Specify a managed Windows device in your zone to perform discovery and deployment tasks in place of a ZENworks Server. This is designed primarily to enable ZENworks Servers running on Linux to offload discovery tasks that use Windows-specific discovery technologies such as WMI and WinAPI and deployment tasks that involve Windows managed devices. For more information, see [Windows Proxy](#).

Linux Proxy: Specify a managed Linux device in your zone to perform discovery and deployment tasks in place of a ZENworks Server. This is designed primarily to enable ZENworks Servers running on Windows to offload discovery tasks that use Linux-specific discovery technology such as SSH and deployment tasks that involve Linux managed devices. For more information, see [Linux Proxy](#)

NOTE: Discovery and Deployment settings are not applicable for mobile devices.

5 Event and Messaging Settings

The Event and Messaging section contains the following settings:

Centralized Message Logging: Configure the settings related to message logging performed by the Primary Server, including automatic message cleanup, e-mail notification, SNMP traps, and UDP forwarding. For more information, see [Centralized Message Logging](#).

Notification Servers: Configure the SMTP server for sending the e-mail notifications to ZENworks administrators. For more information, see [SMTP Settings](#).

NOTE: [Notification Servers](#) is the only setting that is applicable for mobile devices as well.

6 Infrastructure Management Settings

The Infrastructure Management section contains the following settings:

Closest Server Default Rule: Define the rule that is used by a device to determine the closest collection, content, and configuration servers when no Closest Server rules have been defined or when none apply. This rule is simply a listing of the servers in the order you want devices to contact them. You cannot add or remove servers from the lists. For more information, see [Closest Server Default Rule](#).

Closest Server Rules: Create rules that are used to determine which servers a ZENworks Configuration Management 10.2.x/10.3.x device contacts for the collection, content, and configuration functions, if your ZENworks Management Zone includes more than one server. For more information, see [Closest Server Rules](#).

This page is applicable only for devices that have ZENworks Configuration Management SP2/SP3 installed. The settings are disabled when you baseline your Management Zone to ZENworks 11.

MDM Server Defines an MDM Server to allow all mobile devices to communicate with the server at all times. For more information, see [Configuring MDM Servers](#).

HTTP Proxy Settings: Define proxy servers you want to use. A proxy server lets a device connect indirectly to a ZENworks Server through the proxy server. The device's ZENworks Agent connects to the proxy server, then requests resources from a ZENworks Server. The proxy provides the resource either by connecting to the ZENworks Server or by serving it from a cache. For more information, see [HTTP Proxy Settings](#).

System Update Settings: Configure how you want to use the System Updates feature, including how often to check for updates, specifying a download schedule, configuring e-mail notifications, and more. For more information, see [System Update Settings](#).

ZENworks News Settings: Configures the server and the schedule for downloading the ZENworks News. For more information, see [ZENworks News Settings](#).

Zone Sharing Settings: Configures the zone sharing settings. For more information, see [Zone Sharing Settings](#)

Micro Focus Customer Center: Configures Micro Focus Customer Center update schedule and other parameters. For more information, see [Micro Focus Customer Center](#).

Subscription Settings: Configures the settings for subscriptions. For more information, see [Subscription Settings](#).

YUM Service Settings: Configures the YUM Service Refresh Schedule. For more information, see [YUM Service Settings](#).

OpenID Settings: Configures the settings related to you to an OpenID, For more information, see [OpenID Settings](#)

User Source Settings: Configures the settings related to user sources. For more information, see [User Source Settings](#)

Adapter Settings: Configures network adapter definitions for use in locations and security policies. For more information, see [Adapter Settings](#)

Assignment Optimization Settings: Configures the usage of precomputed assignments for managed devices.

- ♦ Assignment Optimization increases the server performance by using precomputed assignments for managed devices. You can run the precomputation by using the zman area command, or specify a schedule.
- ♦ You can perform the following configuration on the Assignment Optimization:
 - ♦ Enable or Disable the usage of precomputed assignments for managed devices.
 - ♦ Specify the interval to compute effective assignments for managed devices.
 - ♦ Select a server on which the effective assignments are computed.
By default, any available server in the Management Zone is used to compute the effective assignment.

NOTE: **MDM Server** is the only setting that is applicable for mobile devices.

7 Inventory Settings

The Inventory section contains the following settings:

Inventory: Configure inventory scanning settings, including on-demand scans, first scans, and recurring scans. You can also specify directories to skip when performing scans and identify software applications that are not contained in the ZENworks Knowledgebase. For more information, see [Inventory](#).

Inventory Schedule: Specify when to run an inventory scan, including specifying that scans do not run automatically or specifying a date-specific, recurring, or event-driven scan. For more information, see [Inventory Schedule](#).

Collection Data Form: Configure which demographic data to collect for a device or devices, such as a user's name or telephone, which department the user belongs to, and so on. For more information, see [Collection Data Form](#).

Collection Data Form Schedule: Configure how you send out the Collection Data Form. You can schedule it as part of a regular inventory scan, you can use a Device Quick Task, or you can use the Collection Data Form Schedule. For more information, see [Collection Data Form Schedule](#).

Inventory Only: Configure inventory scan settings for devices in the zone that don't have the ZENworks Agent installed but do have the Inventory Module installed. This type of scan is useful for devices running Windows NT, Windows 95, Windows 98, Windows Me, NetWare, and Mac OS X. For more information, see [Inventory Only](#).

Inventory Only Schedule: Configure when to run an Inventory Only scan. For more information, see [Inventory Only Schedule](#).

Inventory Only Reconciliation: Control whether and how new workstations are reconciled to avoid the possibility of duplicates in the database. When a scan is made of a workstation that is new to the Management Zone, it is assigned an identifier. If the identifier is lost, such as by a disk crash, it is assigned a new identifier during the next scan. Reconciliation allows you to check whether the workstation is already in the database. If it is, the identifier in the database is changed to match the new identifier. For more information, see [Inventory Only Reconciliation](#).

Purge Inventory History: Configures the inventory history purge settings, which allows you to remove the inventory history and application usage data as necessary. For more information, see [Purge Inventory History](#).

Inventory Report Rights Configures the default rights at the Management Zone level. These rights are assigned to users according to the default settings. For more information, see [Inventory Reports Rights](#).

Out-of-Band Inventory Reconciliation: Configures how the inventory information from devices that are discovered by out-of-band means must be reconciled. Applies only to devices that have the Inventory module installed and not the entire ZENworks Agent. For more information, see [Out-of-Band Inventory Reconciliation](#).

NOTE: Inventory settings are not applicable for mobile devices.

8 Asset Management Settings

The Asset Management section contains the following settings:

Reports: Configure report settings for Asset Management. For more information, see [Reports](#).

Compliance: Set the time of day that license compliance data is refreshed. For more information, see [Compliance](#).

Usage Monitoring: Enable software usage monitoring. For more information, see [Usage Monitoring \(../resources/help/am_usagemonitor.html\)](#).

Usage Display: Configure whether or not usage data is displayed on License Management pages (Asset Management > License Management tab) in the ZENworks Control Center. For more information, see [Usage Display](#).

User Source: Determines the source (Inventory user data or authoritative user source) from which you can select users to associate with product licenses. For more information, see [User Source](#)

Asset Management Report Rights: Configures the default rights at the Management Zone level. These rights are assigned to the user according to the default settings. For more information, see [Asset Management Report Rights](#)

License Collection Schedule: Determines the schedule during which the license usage information is collected periodically for the products for which the sources are configured in asset management. For more information see, [License Collection Schedule](#)

9 Service Desk Registration Settings

Lets you configure settings related to the registration of Micro Focus Service Desk with ZENworks.

9.1 Register Service Desk Server

Select the **Register Service Desk server** option to register the Micro Focus Service Desk Server with ZENworks.

The registration process requires you to import the Micro Focus Service Desk certificate. You can import the certificate either by directly contacting the Micro Focus Service Desk Server or by manually downloading the certificate to a file and then importing it.

To import the Micro Focus Service Desk certificate, do one of the following:

- ♦ **Import NSD certificate by directly contacting the server:**

1. Select the **Import NSD Certificate by directly contacting the server** option to import the certificate by directly contacting the NSD Server.
2. In the **Server name/IP address** box, specify the Server name or the IP address.
3. In the **Port** box, specify the port number.

NOTE: The default value for the Port is:

- ♦ **443:** If you select the **Use SSL** option
 - ♦ **80:** If you do not select the **Use SSL** option
-

4. If Micro Focus Service Desk is configured with SSL, select the **Use SSL** option.
5. Click **Import Certificate**. The certificate is displayed in the Service Desk Certificate panel.

- ♦ **Import Certificate from a File:**

1. Select the **Import Certificate from a file** option if Service Desk has not been enabled with SSL.
2. Download the certificate from the following URL and save it to a file:

`http://<ip_address:port>/LiveTime/WebObjects/LiveTime.woa/wa/DownloadAction/downloadCertificate`

NOTE: In the above URL, replace `<ip_address:port>` with the IP address and port of the NSD Server.

3. Browse to the download location and select the file to import the certificate.
4. Click on **Import Certificate**. The certificate is displayed in the Service Desk Certificate panel.

10 Endpoint Security Management Settings

The Endpoint Security Management section contains the following settings:

Zone Policy Settings: Specify the default security policies that the ZENworks Agent uses when no other policies settings are available. For more information, see [Zone Policy Settings](#).

Endpoint Security Reporting Settings: Configure how often effective policy reports are uploaded from the Endpoint Security Agent to the ZENworks Server. For more information, see [Endpoint Security Reporting Settings](#).

11

Patch Management Settings

The Patch Management section contains the following settings:

Subscription Service Settings: Allows you to control the subscription service, define proxy settings, and enter subscription credentials for 3rd-party patch content. For more information, see [Subscription Service Settings](#).

Subscription Service Content Download: Allows you choose and filter what patch content is downloaded. For more information, see [Subscription Service Content Download](#).

Email Notification: Set up the e-mail notification options when the Patch Management Server detects a new patch. For more information, see [Email Notification](#).

Dashboard and Trending: Configure the patch Dashboard and trending information for the Patch Management Server. For more information, see [Dashboard and Trending](#).

Vulnerability Detection Schedule: Allows you to set the default schedule for vulnerability detections. For more information, see [Vulnerability Detection Schedule](#).

Patch Policy Settings: Allows you to set the default settings for patch policy distribution, enforcement, and reboot behavior. For more information, see [Patch Policy Settings](#).

Patch Policy Pre-Install Behavior: Allows you to define when patches are distributed to the agents and how end users are notified of patch installations. For more information, see [Patch Policy Pre-Install Behavior](#).

12 Audit Management

Audit Management enables you to record various changes and actions that occur in the zone. Once recorded, this information can be audited later for compliance. Audit enables you to centrally monitor activities pertaining to all Primary Servers, Satellite Servers and managed devices.

All these changes and actions are captured as audit events. Each audit event captures information in the form of who did what and when.

- ♦ Events Configuration: Lets you configure audit events in ZENworks.
- ♦ Local Audit Logging: Lets you enable message logging to local audit files. This feature is available only on Primary Servers.
- ♦ Audit Purge Schedule: Lets you configure the audit purge schedule.

For more information about Audit Management, see the [ZENworks Audit Management Reference](#).

13 Telemetry Settings

Telemetry enables Micro focus to collect statistical data about your usage of ZENworks. This data will enable us to ensure that you have the best possible experience with ZENworks. For more information, see [Telemetry Configuration](#) .

14 Push Notifications

This setting is applicable for only mobile devices. Push notifications can be sent to Android Devices and Apples Devices which will enable communication between the ZENworks Server and the ZENworks Mobile App (for Android devices) or with the MDM profile (for iOS devices) installed on the device. For more information, see [Enabling Push Notifications](#).
