

Secure Every Click with Novell® Identity and Access Management Solutions

The list of identity and access management challenges you face is constantly growing. Roles management. User provisioning. Password management. They all require your time, attention and budget. To effectively decrease risk and reduce cost and complexity, you need security technologies you can trust. You need Novell® Identity and Access Management solutions.

Discover Solutions You Can Trust

Today's organizations must effectively manage everything from user roles and provisioning to passwords. But the challenges don't stop there: You must be able to keep up with ever-increasing changes to user accounts and access assignments. You must ensure that people can only access the systems they are authorized to use based on their roles. You must be able to implement stronger password policies without overwhelming your helpdesk with password resets. And you must be able to manage people from outside your company while ensuring internal users have what they need to be productive.

It's a long list of challenges, but the bottom line is this: Your business can't run at peak efficiency if you are worrying about identity and access issues. To meet these challenges and improve productivity, you need solutions

that are flexible and sophisticated. You need solutions you can trust.

Take Advantage of Novell Identity and Access Management Solutions

With Novell Identity and Access Management solutions, you can trust that your business is secure. The solutions help you to mitigate the security risks inherent in manual, error-prone processes by automating user and security management. This automation will also reduce administration costs and improve productivity, allowing your IT staff to concentrate on driving innovation and seizing new opportunities. Our technologies ensure that security and access-related policies are followed every time, eliminating the risks inherent in granting access to network resources. Our solutions help you trust that your systems are managed according to identity and policy—even across business boundaries. Novell Identity and Access

Novell Identity Manager with
Roles Based Provisioning Module
Novell Access Manager
Novell SecureLogin
Novell Identity Audit

"Novell stood out as the market leader in identity and access management. Having centralized management of user identities is only possible with our Novell solutions."

Marc Lamoureux
IT Director
Bridgepoint Health

You can trust that systems are secure and well managed because our Identity and Access Management solutions deliver capabilities such as Identity Lifecycle Management, Access Management, Enterprise Single Sign-On and Password Management.

“The ability of Novell identity management and SIEM products to connect directories, databases and applications to achieve a full enterprise provisioning scenario is an important advantage for customers.”

Sally Hudson
IDC

Management solutions deliver productivity you can prove and security you can trust.

Solve Your Identity-related Business Challenges

Through capabilities such as identity lifecycle management, access management, enterprise single sign-on, and password management, Novell provides enterprises with solutions to address their most complex and comprehensive identity and access management challenges. Our Identity and Access Management solutions provide these capabilities to help you make IT work as one.

Identity Lifecycle Management

Novell Identity and Access Management solutions automate the management of user identities throughout their lifecycles. Our solutions make most account changes an automatic response to a single event. For example, a major event in the user lifecycle, such as hiring, triggers automatic workflows and provisioning that occur with little to no human intervention, based on roles and policy. Users get the appropriate access even when their needs change, anywhere in the enterprise—from the e-mail system to your front door. And it keeps your IT team focused on strategic projects, rather than focusing on change management and other user-related requests.

Access Management

Our Identity and Access Management solutions grant all users—whether employees, contractors, partners or customers—appropriate access while safeguarding resources. Trusted users gain secure authentication and access to portals, Web-based content and enterprise applications, while IT administrators gain centralized policy-based management of authentication and access privileges. Our technologies allow you to share identity information among trusted external sources to provide a unified user experience and tight security—a process known as federation. You can seamlessly integrate different organizations and their users with your organization, and changes in identities and rights are respected across organizational domains.

Enterprise Single Sign-On

Novell Identity and Access Management solutions allow users to access a variety of network resources through a single sign-on process. Once users log in to any computer on the network, they are automatically authenticated to the single sign on-enabled applications, databases and operating system platforms they need—with just one login. These single sign-on capabilities are also flexible enough to require more than one type of authentication—such as fingerprints, tokens, smart cards, strong passwords or any combination of these—to ensure roles-based access to sensitive information. With enterprise single sign-on, organizations can eliminate most password-related calls to the helpdesk and allow IT administrators to focus on value-added projects.

Password Management

Everyone recognizes the need for strong passwords, but without enforcement, even the strongest password policy does nothing to strengthen security. And yet, enforcement

is difficult because applications and systems interact with users in different ways, and some don't even have the capability to specify password requirements. Our automated approach to identity and access management allows organizations to set and enforce strong password policies. Novell Password Management stands between a user and her authorized applications. When a new user is created, or when his credentials change, Password Management validates the password against your company policy, and then synchronizes the password to all other systems. And easy self-service features increase user and IT staff productivity because users can manage their own credentials rather than calling the helpdesk to reset passwords.

Leverage Award-winning Products

We deliver our leading Identity and Access Management solutions through our innovative products, including:

- **Novell Identity Manager with Roles Based Provisioning Module.** *Translate business policies and compliance mandates into IT control, consistently enforced across all connected systems. Simplify identity management across your enterprise with Novell Identity Manager. You can control user administration costs, eliminate complex manual processes, ensure security and enforce compliance enterprise-wide—all while delivering the right resources so your users can do their jobs.*
- **Novell Access Manager™.** *Deliver the right resources to the right people at the right time, even to partners and employees outside the firewall. You can ensure user productivity from any location by extending seamless access and security to all your users with Novell Access Manager. We combine advanced capabilities such as*

role-based, multi-factor authentication, data encryption, single sign-on and client-less virtual private network for local and remote users.

- **Novell SecureLogin.** *Reduce multiple, simple, insecure passwords to a single, complex and more secure password with Novell SecureLogin. Users will only be required to remember a single user ID and password to access their applications, eliminating the need to write down or unsafely store passwords. Novell SecureLogin is the perfect combination with support for advanced authentication methods such as smart cards, biometrics or proximity cards.*
- **Novell Identity Audit.** *Gain an enterprise-wide, real-time view of all network, system, application and user events with Novell Identity Audit. Its ease of use allows you to respond swiftly to known threats and to identify and resolve new risks as they emerge.*

Achieve Rapid ROI with Novell Services

When you deploy Novell solutions, you have access to Novell Services, our world-class support, training and professional services offerings to help you make the most of your investment. For example, our Fast Track professional services engagements can help you deploy tailored solutions quickly and efficiently at a fixed cost. Our flexible and convenient training options ensure that your people can get the expertise they need, which leads to faster ROI and reduced downtime and support costs. And our support organization offers the best customer experience in the industry.

Partner Opportunities

Novell continues to build strong partnerships with System Integrators and Global Solution

Secure Every Click with Novell Identity and Access Management Solutions

www.novell.com

Novell has long had a reputation for quality and leadership in the identity and security space. And we're continuing that tradition of excellence by being placed in the leaders quadrant of Gartner, Inc.'s, "Magic Quadrant for User Provisioning, 2H08."

www.novell.com

Providers. In addition to local providers around the globe that sell and implement Novell technologies, we've built strategic relationships with partners such as SAP, HP and others.

- **SAP.** Expanding on the existing Novell/SAP partnership, Novell is leveraging its strengths in Identity and Access Management to deliver solutions tailored to SAP customers. The solutions extend SAP business policy throughout the enterprise, helping them mitigate compliance and security issues based on SAP policy. Further, the Novell solutions extend roles definition and management beyond SAP's proprietary domain, thereby greatly improving overall role reporting, certification and change management.
- **HP.** HP has chosen Novell as its exclusive partner for migrating its existing base of identity and access management customers to the Novell Identity and Security Management portfolio. Together, HP and Novell have clarified a path forward for HP customers who have invested in critical

identity and access management infrastructure. The migration program will provide comprehensive support to customers throughout the transition, ensuring that the move is as smooth as possible. By taking advantage of the program, HP customers will have access to industry-leading Novell technologies and solutions, as well as the world-class services and support delivered by both HP and Novell.

Make IT Work As One

With Novell Identity and Access Management solutions, you can automate business processes, mitigate security risks and lay the foundation for complying with internal security mandates and government regulations. We can help you solve the fundamental problem of managing who has access to what.
