

# Novell® Single Sign-on for Healthcare

For most healthcare professionals, the plague of multiple passwords and time-consuming logins not only inhibits workflow and complicates compliance, it also costs time and money and could present security risks. Novell® Single Sign-on for Healthcare eliminates these challenges by giving clinicians fast access while maintaining security. The result? More time for providing quality healthcare.

## Overview

It shouldn't be a challenge—or even an inconvenience—to access the applications you need to do your job. That's where Novell Single Sign-on for Healthcare comes in. It allows you to quickly log into and out of the network, streamlining functionality, reducing time-delay frustrations and increasing productivity, all while enhancing security and reducing risk. Additionally, directory-enabled workstation profiles simplify application access by identifying terminals with specific workflow requirements. As a result, Novell Single Sign-on for Healthcare delivers a strong, enterprise-wide return on investment.

## Features and Benefits

- **Fast login and logout, counted in minimal seconds.** *You won't have to wait to gain access to the network or to the applications you need.*
- **Single sign-on to the network.** *One user ID and password provide access to all authorized applications, which also allows the implementation of a stronger password policy.*
- **Invisible application authorization.** *This enhances security and eliminates the opportunity to share passwords. Application usernames and passwords can be controlled centrally and securely.*
- **Directory-enabled workstation profiles.** *Allow individual terminals to support location- or department-based workflows by automatically opening specified applications, saving additional access time.*
- **Support for strong and multi-factor authentication methods.** *Proximity, smart cards, biometrics, tokens, digital certificates and others are supported. The solution's flexibility allows different login methods to be used in various clinical settings.*

- **Reduced password-related administration and IT costs.** *Fewer helpdesk calls to verify or reset passwords allow IT to focus on higher priority needs.*
- **Centralized administration.** *Administrators grant application access by user or group and set preferences on what users can view and edit. Simplified management of password directories and system monitoring deliver more control.*
- **Experience with the enablement of clinical applications.** *Novell has single sign-on enabled many clinical applications, including Windows, Web, Java, terminal emulators and legacy applications. In fact, Novell has enabled more applications than any other single sign-on vendor.*
- **Rapid return on investment.** *You'll find this through less downtime, less IT helpdesk assistance, improved user satisfaction, greater productivity and greater security.*
- **Solutions from the most trusted enterprise single sign-on technology provider.** *Novell solutions provide improved functionality and enhanced security.*

### User-friendly Experience

When dozens of tasks need your attention, the last thing you need to do is stand in front of a computer. With Novell Single Sign-on

for Healthcare, you won't have to. In minimal seconds, you'll be uniquely logged into the workstation from the network level and have the applications you need to do your job. This not only meets HIPAA requirements but is particularly valuable for multi-user workstations. You'll also have automatic authorization to all of your approved applications—every time. That means no more having to keep up with multiple passwords and no more frustration when you can't remember them!

### Solution Architecture

While usability is important, the solution also takes care of other critical issues, like providing secure credential management and data protection. Moreover, administrators can tailor the solution to your organization by gaining the control necessary to manage and facilitate specific business parameters.

Novell solutions fit into a broad range of environments through open standards. Novell Single Sign-on for Healthcare is no exception; it integrates seamlessly into your existing network, so you don't have to replace your current systems, or even your proprietary infrastructure.
