Top Ten Reasons to Upgrade to GroupWise 2014 R2

The GroupWise team proudly presents Micro Focus® GroupWise® 2014 R2. This new release features efficiencies that streamline the entire collaboration experience—boosting productivity and unleashing the power of mobility for end users and IT alike. And continuing improvements in interoperability make GroupWise 2014 R2 a sustainable investment.

It's not just another GroupWise upgrade. It's the step that eliminates any lingering legacy technology that could be holding you back—and helps you leverage the very latest the industry has to offer. Users will love new features that help them manage their inboxes and enable them to be more productive. And new support for Outlook and Mac applications allows your users to be part of the corporate GroupWise system without compromising the functionality of their preferred email services.

Thought GroupWise 2014 was good? Check out the top ten reasons why you should upgrade to GroupWise 2014 R2:

1. **The Apple of their eyes.** Apple lovers will definitely thank you for upgrading. CalDAV and CardDAV support enables users to enjoy Mac Calendar and Contacts in addition to existing support for Mac Mail—all while being connected to the corporate GroupWise system.

2. **Improve your Outlook.** We're also releasing a new version of Mobility Service. GroupWise Mobility Service 2014 R2 will feature support for Microsoft ActiveSync, giving users the ability to use Outlook on their mobile devices in addition to their desktops. This new Mobility Service release also features the GroupWise Profile Setup tool and the ability to perform busy searches in Outlook.

3. **Propose New Time.** Ever gone back and forth with someone about the best time to meet? The Propose New Time Feature makes sure you'll never have to again. When you can't meet at a time someone has suggested, simply click the Propose New Time button. With the assistance of a busy search, you can suggest a new time that works for everyone, thus reducing the back-and-forth email routine.

4. **Quick Responses.** It can be challenging to keep up with the seemingly endless number of emails in your inbox every day. With Quick Responses, you can choose a predefined or custom response to emails that need just a brief, quick answer.

Upgrade to GroupWise 2014 R2 and say hello to unparalleled flexibility, productivity and interoperability:

- Get support for Mac applications and the Outlook mobile client

- Give users even more features that boost productivity

- Take advantage of administrative features that automate manual tasks

There's never been a better time to use GroupWise.
Add even more value to your investment with
GroupWise 2014 R2.

5. **Bidirectional synching with flagged messages.** When you get an email that deserves a longer and more thoughtful response, you can flag it. And now when you flag a message on your mobile device, the flag will sync with your desktop and vice versa.

6. **Invite anyone—even if you aren't the organizer.** In large enterprises, it's easy to miss someone. Now if an event organizer forgets to invite someone you know should be at a meeting, you can invite the person yourself. A notification will be sent to both organizer and invitee to keep everyone in the loop.

7. **Put a face to the name.** In today's office environment (or lack thereof), it's possible to work with someone without ever seeing his or her face. GroupWise 2014 R2 gives you the ability to include a photo of your own, or one that's already in eDirectory or Active Directory.

8. **Collaborate democratically.** The new Voting feature offers users a variety of different ways to voice their opinions. Use predefined questions and responses or create your own.

9. **Single sign-on support.** Bypass the GroupWise login process by logging in once with Active Directory single sign-on. GroupWise also supports single sign-on capabilities from KeyShield.

10. **Auto Remove Proxy Access and Proxy Calendars.** This new feature came directly from you, our amazing customers. You told us via the Ideas portal (our new enhancement request tool) and during onsite visits that manually removing deleted proxy user accounts was a hassle. To remedy this annoyance, we've automated the removal of deleted proxy accounts. The GroupWise client will periodically check your proxy list to see if users are still in the system. If a user account isn't in the system, you will receive a notification that the user's account has been removed from the proxy list, giving you one less thing to do for user maintenance.
