

Micro Focus Start for Filr

Your users need easy, anytime, anywhere access to the files they want. You need to remain in control of your files and security. We provide secure mobile, desktop and web access to the files on your file servers. Micro Focus® Start for Micro Focus Filr provides a production pilot so you can learn how to leverage your existing infrastructure and still provide mobile file access.

Micro Focus Start for Filr at a Glance

■ Project Plan:

We create a project plan for organization-wide deployment

■ Installation:

After creating a project plan, we implement a starter installation for Filr)

■ Pilot Devices:

We then deploy Filr to 10 desktops and 10 mobile devices for you to try out

Micro Focus Start for Filr

Micro Focus Consulting has created a one-week project to introduce Filr into your environment. By working with our experts, you will see how enterprise-level mobile file access and sharing can help your employees stay productive while your IT department maintains security and control.

Whether users want to access their home directories and network folders, synchronize files on their PC and Mac computers, share files internally or externally, or access files from their mobile devices, our Micro Focus Start engagement will help you make the decisions you need to provide mobile file access without sacrificing your regulatory requirements or creating a brand new file infrastructure.

Our first step is to get an overview of your current file and data landscape. Because Filr works with your existing file and directory services, the cost of ownership for your organization won't increase. We will discuss how best to integrate with your existing services, your other

requirements, the regulatory standards for your business and your compliance concerns.

With our fact-gathering complete, we'll create a project plan and implement a starter installation of Filr. We will create a base configuration of Filr deployed for ten pilot desktops (PC and Mac) and ten pilot mobile devices (Apple and Android).

Creating a Filr pilot in your production environment provides you with the context you need to understand how you can manage your business mobility needs. Filr lets your files remain on premise and honors your existing access controls. Your IT staff can feel confident in the knowledge that it remains in control of what's shared and how. Users will not need to move files, allowing them to maintain productivity while remaining mobile. If you need to share files with external users, you can introduce the right policies and controls within your pilot project and adapt them until you are confident that they suit your business needs.

Work with Micro Focus Consulting to realize the value of your Filr investment.

The learning curve is small for all concerned. Users who have experience with “Dropbox-like” products and your existing file directories will have no difficulty when they start to use Filr. Your IT department won’t need to create new policies for this solution because your security mechanisms such as file access and sign-on requirements remain intact.

Filr Training

We also offer a two-day Filr Basics course which introduces students to the fundamental skills of deploying Filr, including installation and configuration of the virtual appliance. Students learn how to provision users from lightweight directory-access protocol (LDAP) directory services, how to configure sharing for both internal

and external users and how to configure the client software for both desktop and mobile access. Go to www.novell.com/TrainingReg/amer for more information.

About Micro Focus

Since 1976, Micro Focus has helped more than 20,000 customers unlock the value of their business logic by creating enabling solutions that bridge the gap from well-established technologies to modern functionality. The two portfolios work to a single, clear vision—to deliver innovative products supported by exceptional customer service. www.microfocus.com
