

Micro Focus Start for Mobile Management

What was once the exception is now the rule: Bring Your Own Device (BYOD) is part of corporate culture everywhere. Your employees are more productive with their smartphones and tablets, but your IT staff still has to secure the network and know who is accessing corporate email. It's a delicate balance: maintaining productivity and keeping corporate data secure. A quality mobile device management solution will help you achieve that balance, and Micro Focus® Start for Micro Focus Mobile Management can get you started.

Micro Focus Start for Mobile Management at a Glance

■ Project Plan:

We create a project plan for you based on your current mobile environment and mobility requirements

■ Installation:

After creating a project plan, we install Mobile Management (the server and database)

■ Pilot Devices:

We then deploy Mobile Management to 10 pilot devices for you to try out

Micro Focus Start for Mobile Management

Micro Focus Consulting is ready to help your company rapidly realize the benefits of enterprise mobile device management. Our distinctive Start project ensures you benefit directly from the knowledge, skills and experience of Micro Focus Consulting. During a Start for Mobile Management project, an expert will work with your team to quickly install and configure Mobile Management in your environment. With our expertise, your organization will establish a Mobile Management environment to provide the value of a complete mobile management solution. Whether your mobile devices are company-issued or privately owned, your Mobile Management solution will allow you to securely manage the devices your employees have come to depend on for email, communications, data access and more.

Our first step is to get an overview of your current mobile device environment, encompassing whatever that means for you, be it corporate users, people in the field or even people who

bring in their cell phones every now and then. Next we discuss your requirements: Do you need more security because of sensitive data? Do you need an application policy on company-owned devices? We help you navigate your options so that you can tailor your installation to your unique needs.

When we've gathered the facts and created our project plan, we will install Mobile Management (the server and the database) and establish the base organizational information for mobile platform management leveraging your lightweight directory-access protocol (LDAP) directory, ActiveSync, simple mail transfer protocol (SMTP), Apple and any other relevant technology.

We create the right configuration for your mobile platform management based on the users, schedules, admins and so on in your environment, and deploy Mobile Management to ten pilot devices so you can try it out and see how it works for you.

Work with Micro Focus Consulting to realize the value of your Mobile Management investment.t

At the end of the engagement, you will have a concrete plan for continued solution deployment, recommendations and an understanding of best practices to help you continue to

manage mobility without sacrificing enterprise well-being.

About Micro Focus

Since 1976, Micro Focus has helped more than 20,000 customers unlock the value of their business logic by creating enabling solutions that bridge the gap from well-established technologies to modern functionality. The two portfolios work to a single, clear vision—to deliver innovative products supported by exceptional customer service. www.microfocus.com

Mobile Management Training

We also offer Course 8023—Micro Focus Mobile Management Administration. This course introduces students to the fundamental skills of installing and configuring Mobile Management and how to enroll and manage supported mobile devices. Students also learn how to create corporate mobile applications, shared files and policy suites, including compliance management. Go to www.novell.com/training/courseware/ts_proj_info.jsp?pid=46585 for more information.
