

# Fighting Data Glut With File Analysis

A large amount of unstructured data, or data glut, can be a management nightmare for organizations and their network administrators, costing time and money. So how do you get a grip on your growing data glut and enforce efficient data management practices for your organization?

The answer is **File Analysis**.

## uncontrolled data growth

we are all victims of data hoarding

Generating incredible volumes of data without an effective system for managing it has become a part of business. Stale, duplicate, sensitive, private, and mission critical files become lost in an unstructured data nightmare.

## so what? isn't data getting cheaper?

there's more at stake than just your money

Hardware accounts for less than half of the total costs associated with your file storage — There are also the costs of compliance, security and access which grow with data.

52% Compliance +

48% Hardware
