

Endpoint Management Asset Inventory - Detecting Windows Metro Applications

Endpoint Management supports Windows. For each Windows managed device, the device's inventory report includes a listing of the device's Metro Applications in addition to the standard list of software products.

Prerequisites

- ◆ Ensure that you have a Windows device with Metro Applications installed.

Workflow Diagram

Procedure

To view the list of Metro Applications for a Windows managed device:

- 1 Perform an inventory scan on a Windows device that has Metro Applications installed.
- 2 After the inventory scan is finished, open the device's detailed inventory report in Endpoint Management Console:
 - 2a Click **Devices** > **Workstations**.
 - 2b Select the Windows device for which the inventory scan is completed.
 - 2c Click the **Inventory** tab.
 - 2d Click **Detailed Hardware or Software Inventory**.

2e Click the **Metro Apps** link in the inventory report.

The details of the Metro Applications that are installed on the Windows device are displayed.
