Micro Focus Desktop Containers 22.6 Readme

August 2022

The information in this Readme pertains to MFDC Application Streaming and Packaging that allows you to run applications in a hybrid workspace. Customizing applications to a virtual package and then delivering through application streaming on any platform with an HTML5 browser or even locally on a Windows OS device.

The following information is included in this Readme:

- "What's New in Version 22.6" on page 1
- "Product Documentation" on page 4
- "Understanding the Upgrade Requirements" on page 4
- "Legal Notices" on page 5

What's New in Version 22.6

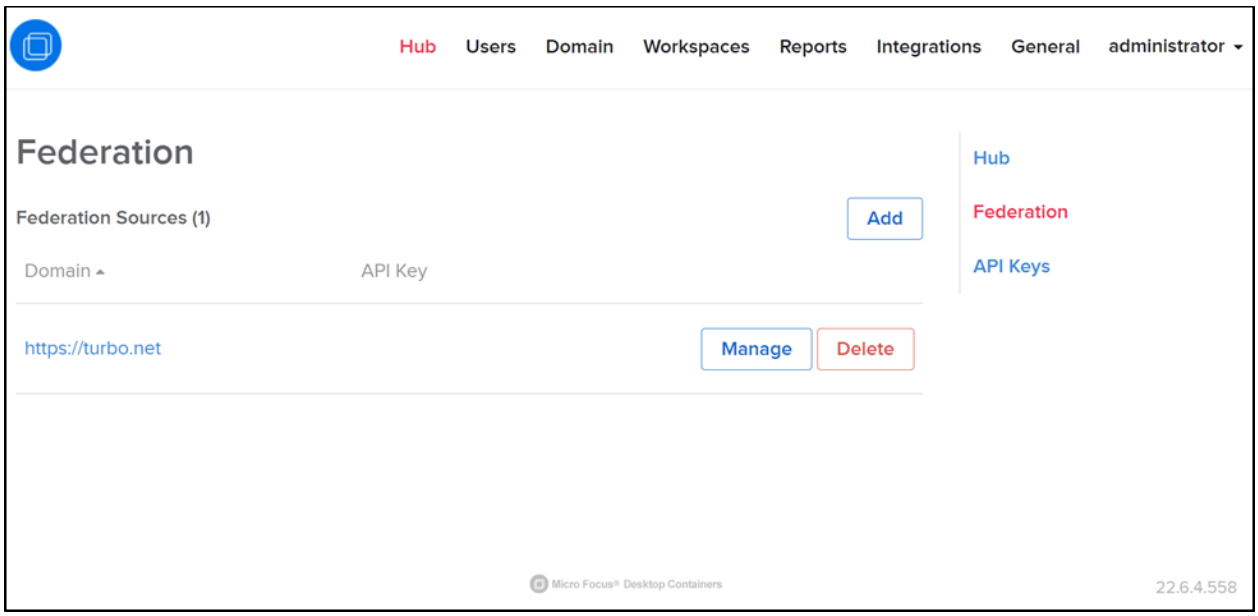
Micro Focus Desktop Containers 22.6 includes the following updates:

- "Micro Focus Desktop Containers - Application Streaming Server" on page 1
- "Micro Focus Desktop Containers - Studio (Application Packaging Tool)" on page 4

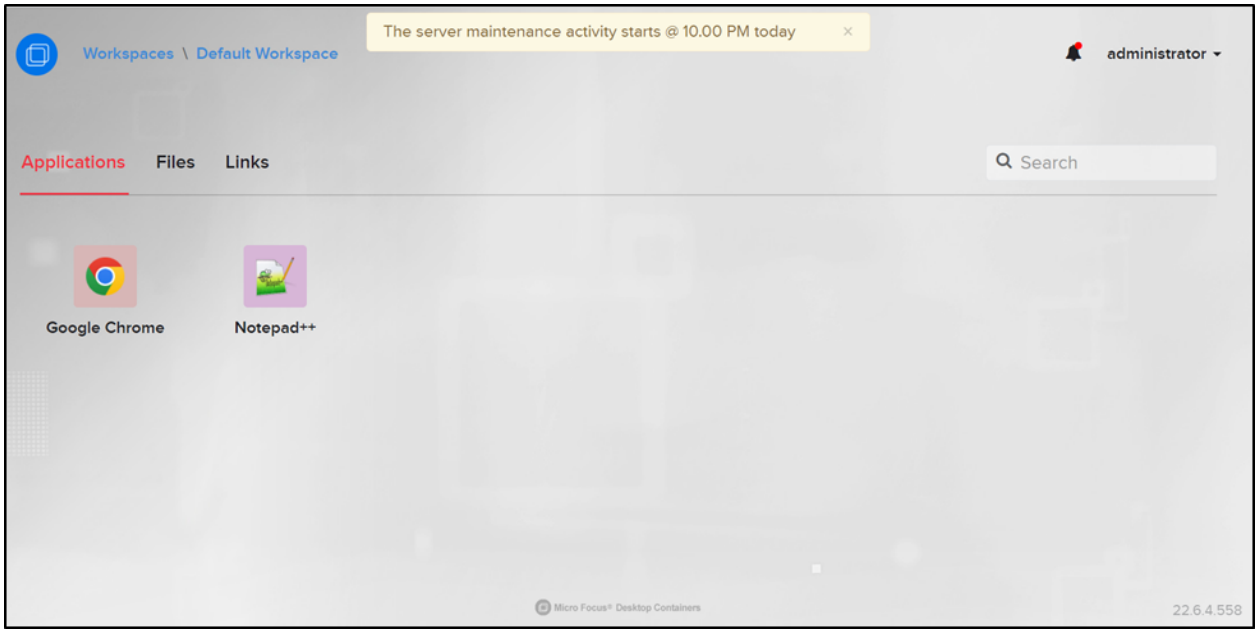
Micro Focus Desktop Containers - Application Streaming Server

This release includes several major performance and features enhancements:

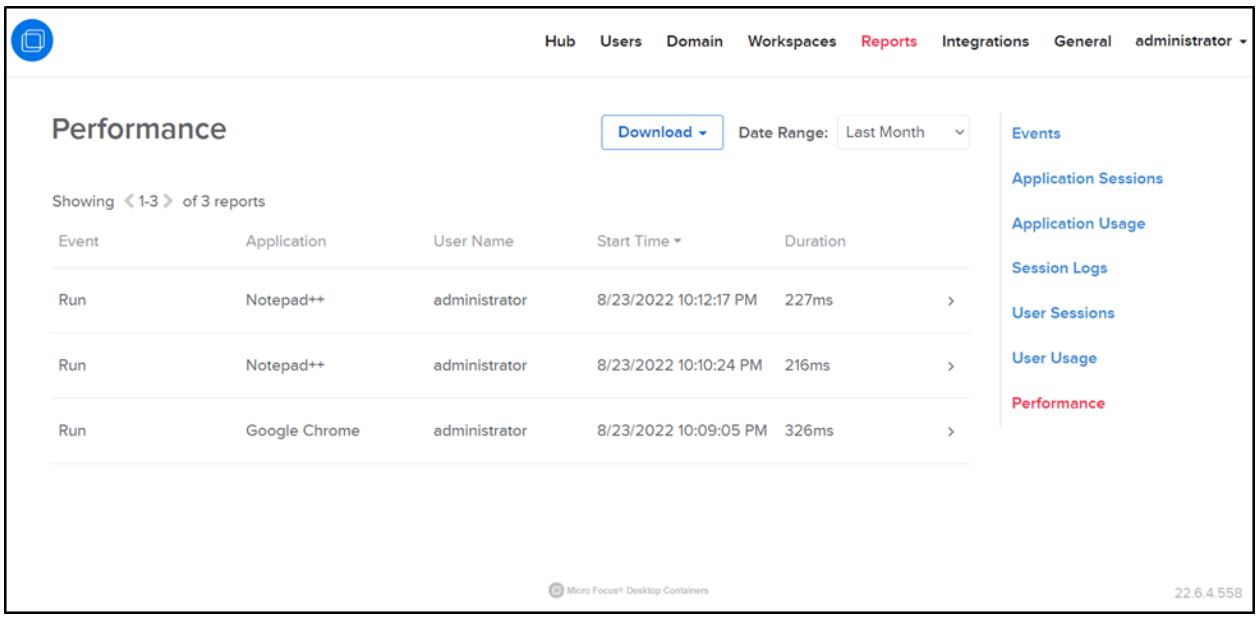
- New! Federation Sources tab provides a single location to configuration federating Hubs. Federation sources can then be referenced during workspace or repository import, simplifying setup and assuring consistent synchronization across subdomains.



- New "Toast" Notification Display Type allows notifications to display as a toast message on the Portal dashboard.



- Application launch performance reports are now available on the Reports area. Performance reports provide detailed performance metrics that can help identify and resolve performance issues.



- Other new features include:
  - Support for both single- tenant and multi-tenant OneDrive application registrations
  - Support for the Filr storage provider in the Files view
  - New Pre-Cache repository setting caches repositories on application servers immediately, providing a faster first launch experience
- Other improvements include:
  - T: Drive now resumes incomplete file uploads the next time the user connects to a session
  - Temporary files no longer show in the Portal file browser
  - Improved usability of the workspace and channel Add Permissions dialogs
  - Improved validation on the URL handlers page
  - Reduced Turbo Server installer size by moving the embedded SQL database to a separate download
  - Reduced Turbo Server log file size
  - Connecting the same storage provider multiple times now shows an error message
  - Creating storage provider integrations with the same name now shows an error message
  - Improved detection and renewal of expired cloud storage access tokens
  - Improved various visuals and text
- This update includes fixes for the following issues:
  - OpenID Connect SSO login could fail if the account did not contain an email claim
  - A redirect loop could occur if an SSL domain URL was configured to a load balancer that pointed to a non-SSL web service root
  - Session handoff incorrectly created a second application window in certain circumstances
  - Scrollbars were incorrectly displayed in the HTML5 client for certain browser zooms and DPI scaling settings
  - User search by full name was failing to return results
  - Changing the date range on a paginated table could result in no results being displayed

- The Turbo service was incorrectly restarting when changing application server tags
- Workspace URL handlers were not copied during workspace replication
- Custom workspace link icons were incorrectly counted towards the API rate limit
- Domain server graphs rendered incorrectly for certain data sets

Micro Focus Desktop Containers - Studio (Application Packaging Tool)

This update includes the following improvements and fixes:

- The Turbo VM is updated to version 22.6.5
- Windows 11 compatibility fixes
- Fix crash when navigating sorted columns in the filesystem / registry editor
- Fix intermittent hang when completing a Setup Capture

Product Documentation

The following sources provide information about Micro Focus Desktop Containers:

- Micro Focus Desktop Containers Documentation website
- Micro Focus Desktop Containers product page
- Turbo.net Documentation page

Understanding the Upgrade Requirements

- All application configuration documents and application certificates created with ZENworks Application Virtualization 8.*x*, 9.*x*, 10.*x, and 11.x* must be re-created in order for application streams to work with the Micro Focus Desktop Containers standalone components.

  To generate a new certificate and regenerate the configuration files:

  1. In the Advanced section of the Micro Focus Desktop Containers Studio, click the **App Config** button to regenerate the application stream configuration files.
  2. To generate a new site license certificate, click **Advanced**.
  3. In the Application Certificates dialog box, click **Request Certificate**.
  4. Specify the following information in the fields:
     - **Organization:** The organization name.
     - **Unit:** The user or unit name.
     - **Allowed Portal Hosts:** The allowed host names of the servers from which the application will stream.
  5. Click **Request** to request the site license certificate, then save the certificate to a desired location.
  6. Click the **App Config** button to regenerate the application stream configuration files again.
- ZENworks Application Virtualization versions 8.*x*, 9.*x*, 10.*x*, 11.*x* and Micro Focus Desktop Containers 12.x always run side by side on a device. The Micro Focus Desktop Containers 12.x installation does not change the ZENworks Application Virtualization 8.*x*, 9.*x* or 10.*x* and 11.x installations in any way. However, if you open a virtual application and save it in version 12.x, it should not be subsequently used with version 8.*x*, 9.*x* 10.*x or 11.x*.
