# Preface

# **About Retain**

**Retain Unified Archiving** 

- Archives email and text messages.
- Catalogs them for search and retrieval.

Retain is not a backup/restore system.

# **About This Guide**

This is the user documentation for Retain Unified Archiving version 24.1.

# For Documentation Feedback

Scroll to the bottom of the online page and enter a User Comment.

# To Join the Retain Idea Exchange

Got an idea for a new Retain feature or enhancement? Log in to OpenText.com and join the conversations happening inside the Retain Idea Exchange.

# For Additional Documentation

See the OpenText Knowledge Base website.

# **To Contact Technical Support**

Browse to the OpenText Support Page and begin typing *Retain Unified Archiving* in the Search for a **Product** field.

# **For Sales**

Go to the OpenText Contact page.

# **For Professional Services**

Contact OpenText Professional Services by calling (877) 772-4450.

- "Logging in to Retain as a Non-admin User" on page 9
- "Searching in Retain's Archives" on page 10
- "Acting On Selected-Items" on page 29
- "Viewing Message Contents" on page 36
- "Exporting Search Results to PST or PDF Files" on page 38
- "Retain Mobile Apps" on page 43

# Logging in to Retain as a Non-admin User

**NOTE:** Administrators can enable OpenID authentication for Office 365 and GSuite users, enabling them to access their Retain archives by authenticating to their respective messaging platforms.

See the following:

- Office 365 Instructions: "Providing Retain Users with Access Through Their Office 365 Accounts" in *OpenText Retain CE 24.1: Archiving Guide*.
- GSuite Instructions: "Open ID Tab (Google Apps module)" in OpenText Retain CE 24.1: Archiving Guide.

To access their Retain archives, users must first log in to Retain.

1 In a workstation browser, enter the following URL:

http://retain-server-ip-or-DNS/RetainServer

For example: http://192.168.1.121/RetainServer

2 In the Login dialog that displays, enter the username and password for the archived mailbox that you want to access.

For example:

- If you are accessing a GroupWise mailbox, enter your GroupWise username and password.
- If you are accessing an Exchange mailbox, enter your AD username and password.
- If you are accessing a Google mailbox, enter your G Suite username and password.

**WARNING:** Because G Suite classifies Retain as a less-secure app, if you attempt to have Retain verify your credentials to access the archive before completing the steps below, Google will deny access, block your account, and send you an email warning of a security risk to your account.

Therefore, before attempting to access the Retain archive, you must do the following:

- 1. Using a browser, log in to your Google account.
- 2. While logged in, go to this page (https://myaccount.google.com/lesssecureapps).

- 3. Notice that the Allow less secure apps: option status is OFF (unless you have previously turned it on).
- 4. To access your G Suite archive, you must turn the option ON using the slider control to the right.

Turning the option on, causes Google to send you an email alert that the setting was changed.

5. Retain actually poses no security threat. However, you can turn the option ON temporarily each time you access the archive if desired.

Retain's browser-based user interface is the core of the information retrieval system for the Retain archive. Administrators, auditors, and users search for what they want and can view, print, export, or forward the results. General users have the right to view their own archive, and will immediately be brought to the Retain mailbox interface, but limited to their own account.

Retain takes a snapshot of each mailbox as an archive is made. Each message is stored where it was found at the time it was archived.

A normal user will be directed to their Retain Mailbox. Users by default have the rights to View and Save attachments, and Forward and Print messages.

If a user has at least one administrative right assigned, the user will see the Retain Management console on login, and must select the 'Search Messages' option from the navigation window in order to access the archive.

The full administrator interface opens with the following tabs, users may or may not have access to all of these depending on the rights assigned by the admin:

Browse Search	Advanced Search	Legacy Search	Exported Items	Tag Definitions	Options

# Searching in Retain's Archives

Path: Retain Server Manager > Overview > Search Messages

#### Figure 1-1 The Search Messages page

Browse	Search	Advanced Search	Exported Items	Tag Definitions	Options	
--------	--------	-----------------	----------------	-----------------	---------	--

If you log in as a user with administrative privileges, you see the six tabs documented in the sections that follow. If you log in as a user without administrative privileges, the Search tab opens and you can search on only the mailboxes where you have access as a regular user.

- "The Browse Tab" on page 11
- "Using the Search Tab" on page 12
- "The Advanced Search Tab" on page 19
- "The Exported Items Tab" on page 24
- "The Tag Definitions Tab" on page 25
- "The Options Tab" on page 25

### The Browse Tab

The Browse tab immediately grants access to the selected mailbox. Individual users will only see their own mailbox, while users with the administrator right to search all mailboxes will have the option to change mailboxes to another user.

#### Path: Retain Server Manager > Overview > Search Messages > Browse tab

Retain is an archiving solution not a message management system. All items are stored in the location Retain found them in the production system and cannot be moved.

To change to a different mailbox, select the 'Change Mailbox' button in archive toolbar. Once clicked, the 'Select Mailbox' dialog will open.

	Name  V begins with em Social Messaging  Show of	✓ Nly users	Show only rec	Search			Ok C	ancel

The Select Mailbox dialog asks for specific information. Select which mailbox you want to see by selecting its radio button and clicking OK.

When searching for a mailbox, the system of the mailbox must be selected as mailboxes from different systems may have the same user name or criteria. Select which mail system the desired user belongs to, specify any further criteria, or leave the criteria blank to display all possible mailboxes from that system.

(If Retain for Social Messaging is set to anonymous user, all Social Messaging data will be contained under the single user '?@?', and separate user names and pertinent information is contained in the 'from' dialog. Otherwise, individual user accounts will be displayed.)

If the search results are extensive, the system will have a 'Next' or 'Previous' button at the bottom of the search results window, which displays the next set of results.

Refine search parameters to reach a manageable search result.

In Retain, you can only browse one mailbox at a time. To search multiple mailboxes simultaneously, use the search function.

After selecting a mailbox, click 'Ok' to load that mailbox into the viewer.

How the browse interface appears will depend on the email system being archived.

## Using the Search Tab

Retain's Search feature designed to work much like a Google search, with anticipated auto-correct search terms. The Search tab allows searching across the entire Archive for administrators, while users can only search their own archives.

Path: Retain Server Manager > Overview > Search Messages > Search tab

Search	Browse	Search	Advanced Search	Exported Items	Tag Definitions	Options	
	↓B∹×				Search		

The Search tab allows for management of searches. This is accomplished by Saving searches for later use. These searches can then be shared with others, loaded later, removed when no longer desired, and trimmed to remove duplicate data.

The icons for these functions are on the left, next to the search field. In order: *Load, Save, Share, Delete,* and *Collapse Duplicates*. **Collapse Duplicates** removes all duplicate results in GroupWise mailboxes.

To begin a search, type the desired search term into the search field, or load a saved search. The search results are automatically populated on specified search terms after a sufficient pause in typing. The auto-complete suggestion feature requires at least 3 characters to be specified and a pause of several seconds before it will begin to work.

Beginning with Retain 23.3, when the search is in progress, the search field, search button and filter options under the Search tab are disabled. In addition, an in-progress spinner is displayed until the search is completed. The disabled options are enabled after the search is completed. If the search takes more than 40 minutes to complete with no results, consider redefining the search query to reduce the complexity of the search for SOLR 8 so that it will return in time.

When the search is in progress, if you want to perform a new search you can open a new tab / private tab or open the application in a new browser.

By default, each time a search is performed, it is saved. The search is remembered for the duration of the login session and persists across the tabs. However, you can disable executing the same search each time a new Retain Search tab is opened, by modifying the following property in RetainServer/WEB-INF/classes/config/misc.properties:

```
disable.sticky.searches=1
```

You can also turn off automatic searches for Easy Search, which triggers a search for the entered search term after 1.5 seconds of inactive period.

enable.autosearch=0

To begin a search, type the search

Tokenized Search Phrase

The indexing engine follows Unicode Standard Annex #29. This standard uses many common characters such as '" . : @ + - \* / and , as phrase-ending or-beginning characters. These characters will cause the system to read any character separated terms as individually entered items when the search is performed. Individually entered terms are treated as OR searches. For example, this means that using the search term 10/20 will be processed as 10 OR 20. Substituting a space instead of the character will provide a logical 'AND' search. For example, searching for 10 20 will be processed as 10 AND 20 as the search term. For example, searching for an email address test@example.com.com will drop the @ even in an exact search with double quotes and with return test AND example.com.

Spaces between normal search terms are a delimiter between search terms:

The search algorithm follows these criteria:

- 1. Highest weighting: All delimited words together consecutively. (e.g. Searching for "quick brown fox" while the message contains: "The quick brown fox jumped over the lazy dog.")
- 2. All delimited words in the string although they may not be right next to each other. (e.g. quick AND brown AND fox)
- 3. Least weighting: Any of the delimited words in the string. (e.g. quick OR brown OR fox)

Results from these different terms are weighted in the order listed above. This behavior can be overridden by locating the solarcloud.indexing.properties file and changing the property phraseSearch.singleWordMatch. Setting this property to '0' turns this off, while leaving it set at '1' activates this search behavior.

Result terms are also highlighted in the user interface to ease visual confirmation that the term exists in the message. However, terms in attachments are not highlighted.

### Wildcard Search

Accepted wildcard characters are: \*, ?, and "". The '\*' denotes 'any character or characters', while the '?' denotes 'any one unknown character'. The double quotes("") denote an exact phrase, and only that exact phrase. Retain does not index letter case, so "IT" is the same as "it".

For example, a search for the term "We all love spoons" will fetch a result of that exact phrase. Asterisks may be added inside the double quotes to allow for incomplete or unknown words: "\*e all love sp\*" will return both 'We all love spoons for our ice cream', and 'We don't like sporks but we all love space.'. While the '?' works like the asterisk, it is only for a single unknown character. This is particularly helpful when searching for exact phrases where the terms may be misspelled. For example, "Their going" would miss a misspelled 'there going'. However, if the search term were "The?? going", it would catch both.

News Report

### Search In

Once search results have begun to populate, the left hand scope pane is populated with limiting and filtering options. If faceting is enabled, the side bar will show numbers next to each section, indicating how many hits there are for each particular topic. The hits are total numbers of matching instances, not items. So if a message states a search term several times in the message body, it will be counted as that many hits even though it is only one message.

### Search In -less Subject(0) Sender(18,838) Recipient(8,388) Domain(18,849) Attachment Name(0) Message Content(19,230) Category(0)

The Search In criteria limits the area in the message or data where the search is performed:

- The Subject indicates hits in the Subject field.
- The Sender field contains the sender of the message or data item.
- The Recipient is the recipient of the item or message.
- The Message Content will search in the following locations within a message:
  - body
  - attachment
  - subject
  - headers

Searching exclusively for the domain will be effective with search terms if a complete domain is provided, otherwise the term is recognized as text. If the top level domain is not known, (.com, .org, .edu, .etc) then the search term should use an asterisk afterwards. For example, searching for example.com will yield good results, as will searching for example.\* or example\*, though results will vary.

Searching for an item that has BCCed recipients has some special behavior. Retain acts like a normal email system, only the sender and the BCCed recipient can see themselves. If you are logged in as the sender, you will be able to see To, CC and BCC recipients as normal. If you are logged in as the To, or CC recipients, you will only see the Sender, To and CCed recipients. If you are logged in as a BCC recipient, you will see the Sender, To, CC, and no other BCC recipients. If you are logged in as admin and in a mailbox other then the Sender, you will not see the BCC recipients listed in the item even though they are returned from the correct mailboxes, except from the Sender folder, because admin is not one of the BCC recipients.

### **Item Type**

The Item Type criteria option limits the type of message which is to be searched. All item types are available in the scope term. Again, the number of available hits is displayed to the side.

The Message Item Type includes:

- Mail
- Phone Message
- Appointment
- Task
- Note
- Message
- Phone Call
- BB Pin

### **Item Source**

The Item Source criteria option limits the results to a particular source. This source can be limited to show 'received', 'personal', 'sent', or 'draft' items.

### **Date Range**

The Date Range criteria limits the time frame of item's creation. Only messages which conform to the date range selected will be displayed in the results field.

The date range may be specified for any of the dates corresponding with an item. The range may also be selected form the drop-down menu, with pre-configured times for last week, month, or year. These time frames are for the past 7 days, the past 30 days, or the past year, not the previous calendar time frame.

Date Range -less	Received Date
Received Date	Sent Date Begin Date End Date
mm/dd/yyyy To mm/dd/yyyy	
OR 💙 >>	Last Week(0) Last Month(284) Last Year(6,208)

### Mailboxes

The Mailboxes criteria limit which mailbox or mailboxes the search will pull results from. To add users to the selected mailboxes list, click on the 'Select' button to launch the mailbox selection window.

Mailboxes - less	
Select	
Currently Selected	

The Select Mailboxes window allows for searching of every mailbox available to the user, the admin user can search all mailboxes. Mailboxes must be searched for by system and specified criteria. The results of the search are displayed below, while the active selected mailboxes can be added to the dialog through the use of the 'Add Selected' button along the top. Alternately, if the 'Add All' button is clicked, it will add all mailboxes displayed in the search results, the Address Book field. Addresses which have been added to the top field may be removed by selecting the red 'X'.

Selec	t Mailboxes							×
	Selected Add All rently Selected Stubby 12 User	Ok Canc	el					
Syst	t Name 🔽 begir	ns with 🔽 Show only us	stubby eers 🗌 Show only recer	Search ntly cached items		Previous	1 Next go to page

	Stubby 12	User	LXPO	Stubby12		U	LXDom	
	Stubby 14	User	GW14LXPO	Stubby14		U	GW14LXDom	

Once the desired addresses have been added to the top window, select the 'OK' button to load them into the search pane.

Address - less	255	dress	Ad	
nytdirect@nytimes.com (62) nytimes@qa.gwava.com (62)				

The Address option limits the results to a selected address. The addresses available are displayed below, and may be selected Addresses in the window are dictated by what is in the result set. Selecting an address adds it as a filter to the top of the search window, or the user may specify an address manually. Multiple addresses may be added to the search window at a time. To remove an address filter, select the 'X' next to the active address, and the result set will be reset.

### Tag

Tag	- less	
(none) Gle Case1 Watch bug53	obal Tags 234 1	

The Tag option limits the search to items which have been tagged with a specific tag definition. The tag definitions may be personal or global. Tags must be specified in advance and applied before this option will work. Select the desired tag to limit the result set.

### Misc.

Misc less	
Litigation Hold	💙
Confidential	🗸

The Misc option contains limits for the Litigation hold and the Confidential tags. They have two settings: True or False. A Setting of 'True' restricts all results to only items which have the selected tag.

# The Advanced Search Tab

The Advanced Search tab contains the ability to specify vast amounts of criteria and combine search terms to exclude and include various searchable items to retrieve specific information. This search works better, the more you know about what you are looking for, as it allows fine tuning of criteria.

Path: Retain Server Manager > Overview > Search Messages > Advanced Search tab

Browse	Search	Advanced Search	Exported Items	Tag Definitions	Options
Search mailboxe All Mailboxe Selected	s es Select				
_	entries where	.0			
Add					

Searches will be restricted to the mailboxes specified in the 'Search Mailboxes' window. By default, all mailboxes are set for searching. To limit the search to the mailbox or mailboxes specified, click on the **Select** button to open the 'Select Mailboxes' window. The 'Select Mailboxes' window functions exactly the same in advanced search as it does in the standard search.

The system will begin to display results as soon as either the search mailboxes have been specified, or new search criteria has been added. To add new criteria, select the Add button.

Options	X
Add search options	
Subject V field contains words VEnd V +	
Save	el

The Search Criteria contains the ability to specify where to search, operating criteria - (word ends with, word starts with, field contains words, field contains phrase), and the desired search terms. The list of search items and fields available to be specified in the drop-down list is shown. Each variable on the list is tied to appropriate search operators, (date range allows the specification of a date, Confidential tags have a true/false operator, etc.)

#### Search Field

Subject: search the message subject field.

Recipient: search the message recipient field.

Attachment name: search the names of the message attachments.

Category: search the item's category field.

Date: this depends on the type of item. This can be a range. If it is a sent email or instant message, it is the sent date. If it is a received email, then the received date; an appointment, the appointment date.

Sent date: search the message sent date field. If the message is an email this can set by email sender and can be spoofed.

Received date: search the message received date field. If the message is an email, it is set by receiving email server and is very reliable.

Begin date: The earliest date to be searched for calendar items, appointments, tasks and so on.

End date: The latest date to be searched for calendar items, appointments, tasks and so on.

Tag: search tags set within Retain.

Litigation hold: search items that have litigation hold applied by Retain.

Confidential: search items that have confidentiality applied by Retain.

Item Type: search the item type, which may be Mail, Phone message, Appointment, Task, Note, Message, Phone call, and BB PIN.

Item Source: search the item source of Received, Sent, Personal, or Draft.

Sender (email): search sender by email address.

Sender (display): search sender by display name.

Sender Domain: search by the sender domain.

Recipient Domain: search by the recipient domain.

Mail server: search by the mail server of sender and recipient.

Messaging Domain: search by the messaging domain of sender and recipient.

File Extension: search by the file extension type.

Folder: search on folder names.

Phone number: search by phone number, if the phone number field exists.

Location: search by location, if the location field exists.

Internet Header: search the term in the Internet header field

Message Content: search only the content (body and attachments)

Attachment size: search by attachment size in bytes.

Opened: search only messages that have been opened.

Read: search only messages that have been read.

Private: search only messages that have been marked private.

#### **Operating Criteria**

Each field can be restricted to:

Field Contains Phrase: An exact search of

the phrase, the same as enclosing the phrase in quotes in simple search. Basically ANDing each word in the phrase. For example, search for "The quick brown fox" will return only items with the entire phrase 'The quick brown fox'

*Field Contains Words:* will search for each word in the phrase. This will be ranked by closest match at the top. Basically ORing each word in the phrase. For example, search for "The quick brown fox" will return only items with the entire phrase 'The OR quick OR brown OR fox'.

Field Does Not Contain Words: will exclude search results with the words.

*Words Start With:* will search for the word but with a wildcard at the end. For example, deter will be treated like deter\* and return determine, determined, deterred, and so on.

*Word Ends With:* will search for the word but with a wildcard at the front. For example, "tion" will be treated like \*tion and return action, playstation, function, and so on.

#### **Cascading Options**

In addition, the interface allows for no limit of search terms, additional terms can be added to the search criteria and connected to the previous search terms. Additional criteria may be logically connected with 'and', 'or', or 'new group'. To add a new search term and criteria, select the '+' directly to the right of the existing search criteria.

Options		×
Add search options		
Subject 💙 field contains words 🗸	AND 🗸	+ ×
Subject 💙 field contains words 🗸	AND 🗸	+ ×
Subject 🗸 field contains words 🗸	End 💙	+ ×
	Save	Cancel

By default, when a new search term is added, it is automatically 'AND-ed' together with the previous search term. This allows you to be able to build complex search terms to fit known data.

When building complex search criteria, it is critical to know what you are looking for. For instance, if an insider trading tip was suspected, and the recipient was known as well as some details about the message and when it must have been sent by, the following search could be compiled:

Options	×
Add search options	
Subject 💙 word starts with 💙 Merge AND 🗸	+ ×
Message Content 💙 field contains words 🗸 company trade secret OR 🗸	+ ×
Subject 🗸 field contains words 🗸 NYSE OR 🗸	+ ×
Message Content 🗸 word starts with 🖌 share New Group 🗸	+ ×
Recipient V field contains words V Sec@insidetrader.com AND V	+ ×
Sent Date <=      12/13/2015 23:50:00End	+ ×
Save	Cancel

In this search, any message sent which stated 'merge', or 'merger' in the subject, and contained a known company secret in the message body, or, discussed the name of an executive involved, would be displayed. In addition, the search would also grab any messages sent to the suspected contact before the merger date. Additional criteria which could be added includes the company's stock listing or any further details pertaining to the proposed leak.

Subject word starts with	Merge	AND
Message Content field contains words	company trade secret	OR
Subject field contains words	NYSE	OR
Message Content word starts with	share	
OR		
Recipient field contains words	sec@insidetrader.com	AND
Sent Date Less than or equal to	12/13/2015 23:50	
Edit Reset		
0 selected Clear selected		

To begin the search, select the **Save** button at the bottom of the query window to perform the search. The active criteria is now listed in the left pane, and may be edited or removed. To add criteria, select the **Edit** button to add to or refine the search criteria.

Beginning with Retain 23.3, when the search is in progress, the filter options under the Advanced Search tab are disabled. In addition, an in-progress spinner is displayed until the search is completed. The disabled filter options are enabled after the search is completed. If the search takes more than 40 minutes to complete with no results, consider redefining the search query to reduce the complexity of the search for SOLR 8 so that it will return in time.

When the search is in progress, If you want to perform a new search you can open a new tab / private tab or open the application in a new browser.

By default, each time a search is performed, it is saved. The search is remembered for the duration of the login session and persists across the tabs. However, you can disable executing the same search each time a new Retain Search tab is opened, by modifying the following property in RetainServer/WEB-INF/classes/config/misc.properties:

```
disable.sticky.searches=1
```

### **RegEx and Wildcards**

Both the Search and Advanced Search contain *limited* support for Regular Expression (regex) searches. An explanation of regular expression searches are beyond the scope of this documentation. There are extensive tutorials on the Internet.

To use Regular Expressions, simply put the desired regex string into the criteria field, denoted by a '/ ' on either side of the regex, for example /red queen/. If the '/' is not used, Search will not recognize it as regex.

Wildcard searches may be done with the '\*' and '?' characters. The '\*' will match zero or more characters, and the '?' will match exactly one character.

#### **Special Characters**

The Search has a list of special characters which cannot be searched for, and will cause erratic results with search criteria. The list of non-supported characters is:  $@,+,-,|,[],{},(),",,#,\&,~$ . All of these characters are viewed as delimiters, and will break up the query. They are not supported and will be replaced by a space.

#### **RegEx Example**

You can search for a string of numbers, for example a US telephone number, of the format: (012) 345-6789.

You can enter into the search field /[0-9]{3}/ /[0-9]{3}/ /[0-9]{4}/ and all number strings that match a three digit, three digit, four digit grouping will be returned.

# The Exported Items Tab

The Exported Items tab shows the export jobs which are currently running, or have been run in the past, on the system. If an export job has completed, this tab will contain the file and provides a link for download of the completed export job.

Path: Retain Server Manager > Overview > Search Messages > Exported Items tab

Browse	Search	Advanced Search	Exported Items	Tag Definitions	Options
- Exporte	ed Items				
		. If you have any running (but not nay download and/or delete the e			ancellation.
<u>Running Jobs:</u> No Items Found.					
<u>Completed Expo</u> No Items Found.	_				

**NOTE:** PST files open in Microsoft Outlook.

Adobe PDF Portfolio files require Adobe Flash for viewing.

Once complete, a notification email is sent, if a notification address was provided, and the PDF or PST .zip file is shown here.

Locate the desired export and select the disk icon to download the export file.

A notification also shows in your Notification Center found under "Welcome, [username]" at the top center of the Retain Mailbox web console.

# The Tag Definitions Tab

The Tag Definitions tab allows the creation and removal of Tags, their automatic comment, and name. Tags are an informative note which can be attached to any data item in the search messages interface. There is no limit to how many tags any one item may have applied to it, and there is no limit to how many tags a user may create. In addition, tags are also a searchable item, making this one of the most versatile ways to add long-term identification for items in the data store.

Path: Retain Server Manager > Overview > Search Messages > Tag Definitions tab

Browse	Search	Advanced Search	Exported Items	Tag Definitions	Options	
🐤 Tag Def	initions					1
•	<u>Name</u> Case1234 Watch bug5334 personal		<u>Comment</u> These messages contain "w	ı		×××××
Add new Tag Dei Name: new Comment: Tag Scope: Glob Save Changes	tag definition					

Before the tag icon will appear on the in the search interface tool bar, there must be at least one tag defined. To define a tag, enter the tag name and initial comment if desired, then, if the user has permissions to do so, define whether the tag is personal or global. Once saved the tag is available for use.

Global tags are tags that any user with the rights to see global tags will be able to view and apply. Personal tags are limited to the user who created them. Only tags visible to users will be available to be searched for by that user.

Any tags created or subject to manipulation by the user logged-in will be displayed under this tab.

To apply a tag to a message or data item in the search messages interface, simply select the data item or items, and then click the 'Add / Remove' tag button in the tool bar.

# **The Options Tab**

Path: Retain Server Manager > Overview > Search Messages > Options tab

- "The Settings Subtab" on page 26
- "The User Rights Subtab" on page 28

- "The Mailboxes Subtab" on page 28
- "The Confidential Exceptions Subtab" on page 28

The options section here is exactly like the section in the Administration | Users section. These settings here are specific to the currently logged in user.

Path: Retain Server Manager > Overview > Search Messages > Options tab

#### Field, Option, or Button Information and/or Action

#### **User-specific Settings Panel**

These settings are specific to each user.

• User ID	User ID of the current user.
Description	Optional information about the user.
<ul> <li>Authentication Method</li> </ul>	<ul> <li>User's authentication method.</li> </ul>
Primary UID	<ul> <li>System-assigned string that links the user's rights.</li> </ul>

#### Inheritable Settings from Group Panel

These settings can be inherited from the specified Configuration Group.

Group Membership	<ul> <li>Groups the user belongs to.</li> </ul>	
Account Can Expire	If enabled, the account can expire.	
<ul> <li>Change Internal Password</li> </ul>	<ul> <li>If Allow User to Change Password is set to yes, the user can reset the password in Retain</li> </ul>	
Forwarded Messages	<ul> <li>The default comment for forwarding messages.</li> </ul>	
Comment	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	
Forwarded Messages	<ul> <li>Automatically append the specified address to forwarded messages.</li> </ul>	
Internet Domain	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	
Date Display Format	<ul> <li>How to display dates.</li> </ul>	
	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	
Time Display Format	<ul> <li>How to display time.</li> </ul>	
	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	
Display Number of	<ul> <li>How many items to display per page.</li> </ul>	
Messages Per Page	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	
Message Age Display	Default date filter for searching. Can be changed on the fly.	
	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	
Session Timeout     (Minutes)	<ul> <li>A value between 10 and 480 minutes.</li> </ul>	
(Minutes)	You can have the user inherit this setting from the specified Configuration Group, or you can set it to one of the values in the drop-down list.	

### The User Rights Subtab

You're shown the rights you have within Retain on this screen. Available rights may only be changed by a user administrator within the Administration screen.

III Options					
Settings	User Rights	Mailboxes	Confidential Exceptions		
User Rights					
Rights explicitly granted to you, and inherited from your Group membership.					
You have full rights to search all mailboxes.					

### The Mailboxes Subtab

In this section, you're shown the mailboxes you have been given explicit rights to work in. By default, you have rights to only your own mailbox. If an administrator explicitly gives you rights to other mailboxes or you are a member of a group that has rights to other mailboxes explicitly, those mailboxes will be shown here.

III Options				
Settings User Rights Mailboxes Confidential Exceptions				
Mailboxes				
These are additional mailboxes beyond your primary mailbox you may access. You have full rights to search all mailboxes.				
-				

### The Confidential Exceptions Subtab

When a user marks a message as 'Confidential' in the archive, the message becomes invisible to all except administrators who have been given the confidential right, or any user which is specified in the exception list.

III Options				
Settings User Rights Mailboxes Confidential Exceptions				
Confidential Exceptions				
Confidential Exceptions				
You can apply or remove the confidential state to messages. This will normally affect only messages in mailboxes you ow can view these items.				
default 🗸 Add Group				
Add User				

The 'Confidential Exceptions' tab allows users to add any necessary exceptions to the confidential tagging. Confidential tagging may be applied to protect sensitive. However, sometimes this information may need to be viewed by others and instead of granting that user rights to see confidential items for all users, a user may apply that right to only their items.

A group or individual user may be added to or removed from the list.

# **Acting On Selected-Items**

When browse or search queries display found messages, various tools are available, depending on the current user's rights.

You will first have to select one or more items with the checkbox before these will function.

- "Date Range Drop-down" on page 30
- "Litigation Hold Icon" on page 30
- "Confidential State Icon" on page 31
- "Tags Icon" on page 31
- "Delete Icon" on page 32
- "Forward Icon" on page 32
- "Export Icon" on page 33
- "Restore Icon" on page 33
- "Print Icon" on page 34
- "Change Mailbox Icon" on page 34
- "Quick Search" on page 34
- "Results per page selector" on page 34
- "Previous/Next Control" on page 35
- "Go to Page" on page 35

- "Quick View" on page 35
- "Selection and Sorting" on page 36
- "Browse Tab Defaults" on page 36

### Date Range Drop-down

Last 30 days 🛛 🗸 🎁

Only messages in the specified time frame are displayed for selection. The date range can be any of the drop-down options or it can be a custom range as selected through the 'custom' calendar button.

### **Litigation Hold Icon**

After you select the messages you wish to affect, use the Litigation hold icon applies the litigation hold property to messages and items. Items with a litiga-tion hold cannot be removed from the system. To apply or remove the litigation hold from items in the archive, a user must have the litigation hold right.

Litigation Hold 🗙 🗙
Apply or remove litigation hold
Applying litigation hold prevents the deletion manager from deleting the selected item. Note it is more efficient to exclude the entire mailbox if the majority of messages needs to be preserved.
Apply to selected items
Remove from selected items 🔿
Ok Cancel

To apply or remove a litigation hold, first select the desired item or items, then click the 'Litigation Hold' button to open the litigation hold window.

Select whether to apply or remove the hold. Select 'Ok' to continue.

Items which have a hold placed on them display a miniature hold icon next to the message icon.

# **Confidential State Icon**

🌀 Confidential State

After you select the messages you wish to affect, use the Confidential State icon to toggle the confidential state.

Confidential items are only visible with Admin rights, or to those specified by the user under the *Options | Confidential Exceptions* tab. Items which a user has marked in their box as Confidential may be viewed by other users who have the 'See Confidential Items [other mailboxes]' admin right.

Confidentiality 🗙				
Apply/Remove confidential state				
You can apply or remove the confidential state to messages. This will normally affect only messages in mailboxes you own, unless you have been granted special rights. Unless you grant additional rights to other users, only you can view these items.				
Apply confidentiality to selected messages 🔘				
Remove confidentiality from selected messages				
Apply/Remove confidentiality to children of selected messages				
Ok Cancel				

To apply a confidential state to an item, select the item then select the 'Confidential State' button.

Items which have been marked confidential display the confidential icon below the message icon.

### Tags Icon

After you select the messages you wish to affect, use the Tags icon to add or remove tags from items. This is only visible with appropriate rights. Tags are an informative note which can be attached to any data item in the search messages interface. To apply a tag, select an item and click the 'Tags' icon.

Tag Messages 🗙 🗙					
Apply/Remove Tags					
You may "tag" or "untag" messages here, and then search for items with these tags applied. This can be helpful for categorization purposes.					
Apply tag to selected messages ()					
Remove tag from selected messages 🔿					
Apply/Remove tag to children of selected messages					
Selected Tag Watch					
Comment					
Ok Cancel					

Select the tag which is to be applied. All tags open to use by the user will be displayed. There is no limit to the amount of tags an item may have. An additional comment may be added to the tag for the specific item or items selected. Additionally, any associated items or messages, 'children', such as all messages in a thread, may also be selected for tag creation. Tags must be created previous to applying them to messages. See the Tag Definitions tab for more info.

Messages with a tag applied to them, either a global or personal, will show a miniature tag icon next to the message or item icon.

### **Delete Icon**

After you select the messages you wish to affect, use the Delete icon to mark items for removal from personal archives. This right is only visible with rights. To delete an item, highlight the item and then select the 'Delete' button.

The Delete right is not a default right, it must be specifically added to users or groups. Messages or data marked to be deleted will not necessarily be immediately removed, but will be queued for deletion. The actual item removal will depend on server availability and the amount of items queued for deletion.

### **Forward Icon**

Porward

After you select the messages you wish to affect, use the Forward icon to forward messages out of their archive to a specified address. This right is only visible to users who have the Forward Messages right. The STMP server must be setup by the admin user under Server Configuration | Notification for this to function successfully.

Select a message or messages and then the 'Forward' button. Specify the address or commaseparated addresses the messages should be forwarded to, a desired subject, and any comments. Finally, select the 'Forward Messages' button and Retain will send the message via SMTP. This is a default user right.

There will also be a notification entered in your Notification Center found under "Welcome, [username]" at the top center of the Retain Mailbox web console.

# **Export Icon**

Export

This icon name changes based on which tab you are in and what item is selected for export.

Table 1-2 Export Icons

Icon Name	Tab	Description		
Export Selected	Browse, Search and Advanced search	After you select the messages you wish to affect, use the Export option to export messages, calendar events, and other items in either PST (Microsoft Personal Storage file) or Adobe PDF Portfolio format.		
Export Mailbox	Browse	When you select mail box you wish to export and click the <b>Export</b> <b>Mailbox</b> , all folders and messages are exported		
Export Folder	Browse	When you select folder you wish to export and click the <b>Export Folder</b> , all subfolders and messages are exported. If the selected folder has subfolders, then <b>Export Subfolders</b> checkbox is displayed in the Export Messages wizard.		

When you click the Export icon, the Export Messages dialog displays, letting you select the output format desired.

For more information, see "Exporting Search Results to PST or PDF Files" on page 38.

### **Restore Icon**

Restore

After you select the messages you wish to affect, use the Restore icon to restore messages to the message system. Forwarding is the preferred method to return mail to the email system. To use, select the desired messages and select the 'restore' button. Once there, select the target message system and mailbox. (If the user has rights to restore to any mailbox, the target mailbox must be selected. Select the 'Restore Message' button and messages will be restored to that account.

Restoring a message which currently exists in the target mailbox results in a duplicate message existing in that mailbox. It is recommended to only restore messages that have been deleted from the mail system, but exist in the Retain archive.

Restore works best with On-Premise Exchange, restoring the message completely to the Exchange Inbox, which is seen as a new message by the system. With GroupWise, it restores a link to the message, if stubbing server is configured in Retain but stubbing does not need to be enabled in GroupWise and we do not recommend enabling Stubbing in GroupWise. Restore does not work with GMail.

### **Print Icon**

After you select the messages you wish to affect, use the Print icon to print selected messages. To use this option, select the desired messages and then select the 'print' button. The 'print' function utilizes the user's local print configuration; if there is no printer accessible to the local workstation, print will not function. This is a default user right.

## **Change Mailbox Icon**

Change Mailbox

If you are an administrator or have proxy rights to another mailbox, use the Change Mailbox option to switch mailboxes.

## **Quick Search**

The Quick Search displays only for Browse tab results. Use it to rapidly search for data in the subject field of messages in the selected mailbox.

### **Results per page selector**

Results are automatically set to 100 per page. The selector lets you specify how many messages are to be displayed on each page. You can use the predefined values or specify an alternative limit in the field provided.

# **Previous/Next Control**

< Previous <u>1</u> 2 3 ... 5 Next >

The Previous/Next option lets you navigate through the search or browse result pages. The total number of pages is displayed next to the 'Next' button.

Select a number to immediately move to the desired page

### Go to Page

go to page

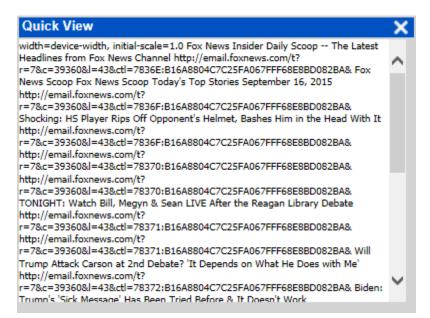

The Go To Page option lets you specify what page you want to jump to.

Select the option box, specify the page number desired, and hit 'enter' to immediately go to that page.

### **Quick View**

 $\sim$ 

This appears in a column in the list of search results. Click it to quickly view the body of a message without having to actually open the message in the interface.

Quick View is a display-only function so there are no actions available. Click the X to close the window.

## **Selection and Sorting**

	Туре 🔶	From	Subject 🔶	Recipients	Date 🔶	Mailbox	Folder
--	--------	------	-----------	------------	--------	---------	--------

The top column bar contains all the different column headers and is located directly beneath the toolbar. This tool contains a select all/none checkbox as well as sortable column headers. Every column in this bar may be sorted by order except the 'Mailbox' and 'Folder' columns. (They are multi-value attributes and thus are not sortable.)

### **Browse Tab Defaults**

By default, the browse window remembers which mailbox last browsed was, and will return to that mailbox when opened. When Administrators first login, they will be taken immediately to their mailbox. Afterwards, the browse will remember their last location.

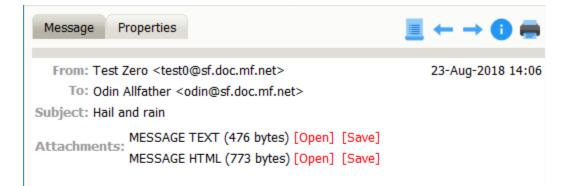

# **Viewing Message Contents**

You may double-click on a message to view the contents. From the Message tab you may open (if the proper viewing agent is installed) or save the message or attachments to disk.

Message	Properties	$\blacksquare \leftarrow \rightarrow \blacksquare \blacksquare$
	est Zero <test0@sf.doc.mf.net> din Allfather <odin@sf.doc.mf.net> ail and rain</odin@sf.doc.mf.net></test0@sf.doc.mf.net>	23-Aug-2018 14:06
Attachmen	MESSAGE TEXT (476 bytes) [Op MESSAGE HTML (773 bytes) [Op	

Remember how free clouds are. They just lay around in the sky all day long. Don't be bashful drop me a line. We don't have to be concerned about it. We just have to let it fall where it will. There are no limits in this world. The least little bit can do so much. See how easy it is to create a littl e tree right in your world. We'll have a super time. We don't really know where this goes - and I'm not sure we really care. It's a super day, so why not make a beautiful sky?

The Properties tab shows various properties about the message.

• **Created Date:** This is set by the sending messaging system and is stored in the message header, which Retain reads and stores.

- **Delivered Date** This is set by the receiving messaging system and is stored in the message header, which Retain reads and stores.
- Stored Date: This is set by Retain when the message is stored in Retain.
- Expiration This is set by Retain, if that feature is set as part of Job | Core Settings.

# **Exporting Search Results to PST or PDF Files**

1 After you have displayed and selected one or more archived messages in the Browse, Search, or Advanced Search tab, click the Export button.

The Export Messages dialog displays

Export Messages	×
Select how would you like to export: O Export to PST O Export to PDF	▲

2 Select either Export to PST or Export to PDF and continue with the instructions that match your selection.

## **Export to PST**

- "Core Settings Tab" on page 38
- "Ensuring Adequate Disk Space" on page 39
- "Setting the PST File Maximum Size" on page 39
- "The PST Export Process" on page 39
- "PST Export Speed" on page 40
- "Running the Export Process" on page 40

#### **Core Settings Tab**

Send email when export is complete to		
Download Filename	Export PST Set 16-Aug-2022 0807	
Maximum size of PST in GB (must be less than 49 GB )	49	
Segregate messages by mailbox		

Path: Retain Server Manager > Overview > Search Messages > search or browse, then select one or more messages messages > Export > Export to PST

Table 1-3 Using the PST Export Core Settings Tab

Field, Option, or Button	Information and/or Action
Send email when export is complete	Type a valid email address of person to notify.
Download Filename	Accept the generated filename or type an alternative.
Maximum size of PST in GB	Type a smaller number if desired. Size cannot exceed 49 GB.
Segregate messages by mailbox	Select this option to have the PST files be separated by mailbox. The mailbox ID is appended to the file name.
Segregate messages by mailbox	Select this option to have the PST files be separated by mailbox. The mailbox ID is appended to the file name.
Export Subfolders	This field is available only if you are exporting items from Browse tab.
	Select this option to enable you to export the messages stored in the subfolders.

#### **Ensuring Adequate Disk Space**

Because PST exports can be very large, you might want to designate an additional drive to contain them. If a drive is added, make sure to change the Exports Path in the "Storage Panel" to point to the new drive. In Linux, make sure that the ownership of the Exports Path is set to tomcat:www or exports will not run.

PST files are larger than the corresponding files stored in Retain. Furthermore, you cannot estimate how large a PST export will be based on the size of the selected messages stored in Retain.

Message body size, the number of messages, the type of messages, the size of attachments that are included, and the number of recipients all factor in the PST file size. Retain doesn't have this information before the export is created and therefore cannot estimate the exported file size.

## Setting the PST File Maximum Size

Outlook cannot open PST files that are larger than 50 GB. Therefore, Retain caps exported files at 49 GB maximum.

You can specify a smaller maximum size if needed.

Typing a number larger than 49 in the Maximum size field is allowed, but when the export runs, the maximum size reverts to 49 GB.

## The PST Export Process

When all messages have been exported to PST format, Retain

1. Checks the size of the PST export.

- 2. If the PST file is smaller than the specified limit, Retain saves it with the name specified in the **Download Filename** field and makes it available for downloading.
- 3. If Segregate messages by mailbox is selected, Retain splits the files by mailbox ID and appends the ID to the Download Filename.
- 4. If the file is larger than the specified limit, Retain does the following:
  - a. Splits the resulting file into separate PST files that are no larger than the limit.
  - b. Compresses the files into a combined .  $\mathtt{zip}$  file with the name specified in the Download Filename field.

## **PST Export Speed**

Disk I/O is the main limiting factor to export speed. The following points also apply:

- If possible use SSD storage in the Export Path location to greatly increase the speed at which the export runs.
- If this is not possible, the next best option is to add more processing power.
- Adding memory will have very little effect, if any, on export speed.

## **Running the Export Process**

When you are satisfied that all options and parameters are set correctly, Click the **Export** button. Progress and status of the export job are shown in the "The Exported Items Tab" on page 24.

## **Export to PDF Option**

The default view provides a list on top of the PDF viewer which works as a table of contents to provide access to the exported archive and requires that Adobe Flash is installed on the viewing workstation.

Select the desired message or messages, then click the Export button.

## **Core Settings Tab**

Maximum size of PDF in MB (must be less than 2048)

Time Zone

Additionally, any restrictions to the size or time zone for the PDF. If the archive size does not exceed the maximum size, then the archive will be contained in one file. If the archive is larger than the defined limit, it will be exported in multiple PDFs. Time zone information will be used for formatting any time and date information in the email headers. The time written to the cover sheet and date column in the PDF table of contents is written according to the time zone of the Retain Server.

When ready to export, select 'Export'. Depending on the size of the selected archive, the export may take some time.

Currently running export jobs are listed under the 'Exported Items' tab.

# **Retain Mobile Apps**

Users can access Retain through apps for Android and iOS that are available through Google Play and the Apple App Store. Administrators can also use any Enterprise Mobile Management product that has AppConfig support.

- "Android App for Retain" on page 43
- "iOS App for Retain" on page 47

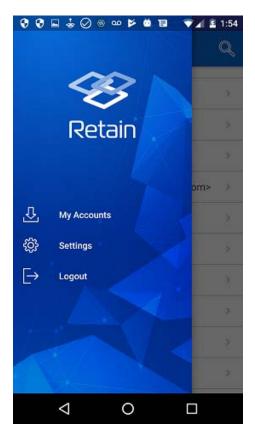

## Android App for Retain

The Mobile App for Android requires Android Oreo 8.x or later.

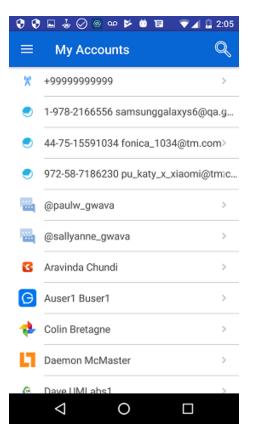

Once the app is downloaded and installed, enter the Retain Server address. This should be given to you by the system administrator and is in the form of https://<Retain-Server-URL>/RetainServer. Log in with your email credentials

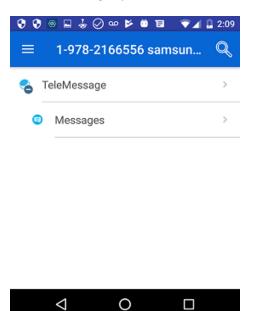

Once logged in, you may view your accounts, change settings or logout.

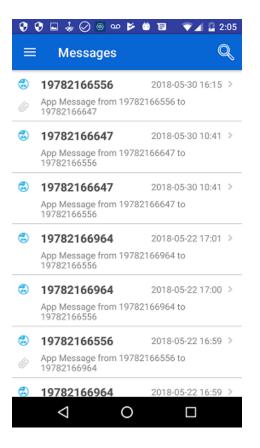

Pressing "My Accounts" will take you to the Retain archive mailboxes you have access to.

Select a message system to browse messages from. For example, TeleMessage.

Press "Messages" to be taken to the message view.

You can press the hamburger menu at the top left to access settings.

	GW Archive Migration	Import native GroupWise archives into Retain

# **Outlook Plugin Administration**

## Overview

The Outlook Plugin integrates the Retain archive directly into the Outlook client. After it is downloaded from the Tools page and installed, users see a new tab and ribbon in the Outlook client for connecting to Retain.

They can then retrieve messages, add them on their local machine for administration through the Outlook client. They can then search in both the Retain archive and in the locally restored messages.

Actions performed through the plugin do not modify the Retain Server or archive.

The Outlook Plugin is found on the tools page. To access the tools page, select the 'tools' link from the top right of the Retain Server administration page.

Language English 🚽 💷 Welcome, admin | About | Tools | Status & Updates | Logout

# **System Requirements**

- Windows 8.1, Windows 10, or Windows 11, fully updated
- Retain 4.3 or higher
- Visual Studio 2010 Tools for Office Runtime
- .Net 4 or higher
- Outlook 2010, 2013, 2016, 2019, 2021 and Microsoft 365.

**NOTE:** Whether the 64-Bit or 32-Bit version should be used is determined by the bit version of Outlook installed, not the version of the OS. To check the version of Outlook being used;

2010: The information on the system is located under File | Help | About Microsoft Office

2013: The information on the system is located under File | Office Account | About Outlook

- 2016: The information on the system is located under File | Office Account | About Outlook
- 2019: The information on the system is located under File | Office Account | About Outlook

2021: The information on the system is located under File | Office Account | About Outlook

*Microsoft 365*: The information on the system is located under File | Office Account | About Outlook. The Retain Outlook plugin will support classic view. The new Outlook view is not supported.

#### **Proxy Access**

The Retain Outlook plugin does not return mailbox data from other users the primary user has proxy access to but only the messages from the primary user's Retain mailbox.

If the user has access rights to other mailboxes on the Retain system, Outlook will error because it doesn't know how to handle multiple users.

# Installation

Prerequisites

**On the Retain Server**: Under Server Configuration | Communications | Retain Server Connection, set the Server Protocol (http or https), Retain Server Host (IP or hostname of the Retain server), Retain Server Port (default: 48080), and Retain Server Path (default: /RetainServer).

use a DNS host nam of the <b>Router or R</b> I	e for the Host Name. It	to know how to connect to the Server. It is highly recommended that you 's important to note that you are specifying the URL from the point of view acting the Server, which may or may not match the URL you'd use from
Server Protocol	http 🗸	
	151 155 183 140	
Retain Server Host	131.133.103.140	
Retain Server Host Retain Server Port		

#### On the Workstation: Install:

- Visual Studio 2010 Tools for Office Runtime
- .Net 4 or higher

#### **Retain Outlook Plugin Installation**

If deploying to an individual user on a workstation, the Outlook plugin needs to be installed by the user account that will be using it (HKEY\_CURRENT\_USER), and administrator credentials will be required to be entered during the installation process.

If deploying to multiple users on a single workstation a group policy will need to be created to set the registry keys needed by the Outlook plugin across all users. The October 2017 updates of Office and Windows have caused some issues (https://support.office.com/en-us/article/Fixes-orworkarounds-for-recent-issues-in-Outlook-for-Windows-ecf61305-f84f-4e13-bb73-95a214ac1230) that may need workarounds (https://www.slipstick.com/problems/folder-home-pages-arentavailable/).

If deploying from a distribution server, utilize the MSI installer package. In addition, silent install commands are provided. A full list of silent install commands can be found in the Silent Install section below.

Make sure to utilize the correct version of the installer to match the bitness (32-Bit or 64-Bit) of the version of Outlook, not the operating system, the workstation has installed.

Begin the installation, accept the license agreement, and click 'Next'.

Back Next		Cano	el

The Retain Outlook Plugin may be customized during installation, to only allow certain functions once installed.

*Retain server URL*: this is the connection address for the Retain Server. Do not put the '/ RetainServer/' suffix on the end of the URL. Use the following syntax:

https://<Retain\_Server\_URL>

*Please Select the Outlook Plugin to Install*: There are two options for the plugin. Retain Download allows the user to download data from the Retain server to their workstation. Retain Archive opens the Retain interface in the Outlook window

*Download Retain Data on Outlook Startup*: This tells the Retain plugin to match the local data with what is in the Retain Server. This does not push any data from the plugin to the Server. The plugin may be configured to download at start, or on an automatic time period. The setting is designated in hours.

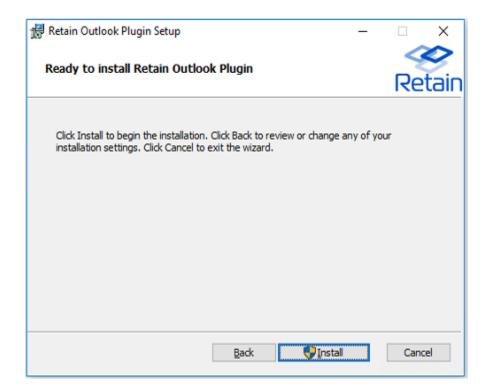

Allow users to change settings: If checked, the following selected options are available to be changed by the user in the plugin. If this option is not checked, the options will be grayed-out in the settings section of the plugin, and cannot be modified.

Once installed and initialized, the Retain tab, ribbon, and folder structure are available. A new folder called *Retain Download* will appear.

To access the folder structure, simply select it as you would the normal folder structure in Outlook.

Individual settings of the plugin can be changed from the ribbon.

# **Retain Archive**

The Retain Archive button is simply a portal to the Retain web interface for users.

A new folder called Retain Archive will also be created at the Inbox level of the user's local folder. This will allow the user to Browse or Search their Retain archive mailbox. Click on Launch Retain or the Retain Archive folder to log into Retain and the Retain web interface will appear in the Outlook window.

# **Download Settings**

Retain	D	ownload Settings	×
Download 1	Month(s) • of	Messages Older Than 0	Days
Limit the Number of Me	essages to 50	Messages	
Limit the Search	Results to 500	Messages	
Filter by the Type of the	e Message		
🗌 Mails	Appointments	□ Notes	🗌 Tasks
Save	Cancel	Account Settings	Clear Local Archive

The Download Settings contains the criteria which dictates what message data will be added into the local storage and made available in the Outlook client. It is recommended to keep the download size small because Outlook has difficulty serving very large amounts of data.

The download time limit dictates the time frame of messages which will be displayed in the Outlook client. This can download a large amount of data which may overwhelm the resources available to Outlook, so it is best to limit this to 90 days or less.

Messages may be limited by total number, as may the search results. (Search results limit the number of results by default to only display 500 messages.)

In addition, the type of data may be limited to only the types selected, or all types.

What data is added to local storage can be limited by age, number of messages, or item type. 'Save' saves your settings. However, before the download can be performed, the login information must be provided. Select the 'Account Settings' button.

## **Account Settings**

Usernan	ne	_
Passwor	d	
English		~
	Log In	
	OR	
n	Login with Office 365	

The account settings are simply the login credentials of the account which is to be used for the download. Input the email and password. GroupWise usernames must not be the full address. If inputting an Exchange username, enter the entire email address. Save settings.

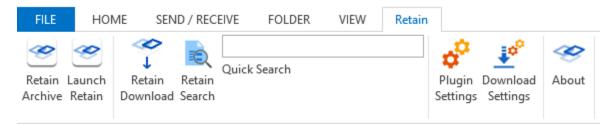

# **Clear Local Archive**

The Clear local archive button does exactly as it sounds, it will empty the local archive, Retain, folder tree of all message data items. Any folders which were part of the Retain archive, and not part of the default folder set of Outlook will also be removed. The default set of folders and the Retain folder tree will still be present. To completely remove the Retain outlook plugin, please uninstall the plugin from the system's Control Panel.

## Launch Retain

The Launch Retain button will cause the default browser to open to the Retain Server URL.

# **Retain Download**

The Retain Download button initiates a download of the users Retain archive according to the download settings. Download settings and the user credentials must be configured before the download will complete.

# **Retain Search**

The user's downloaded Retain archive can be searched with the search functions of the ribbon. To search the entire archive click on the Retain Archive button and use the search tab.

Searching the downloaded Retain Archive with the Retain Plugin is simple. Select the 'Retain Search' button from the Retain ribbon.

The search interface has two different screens: Easy and Advanced search.

# **Easy Search**

With the Easy search, the plugin only offers a simple keyword and date range.

≪ Reta	Easy Search	×
Easy Search Advance	d Search	
Keyword	poor Alice	
From Date	10/21/2016 To Date 4/21/2017	
	Search Cance	el

The search keywords are subject to the same restrictions and abilities as the Retain web interface. Easy search supports wildcards and quotes for search criteria. Without quotes, the search text will be searched as each word is an individual search term. With quotes, the search phrase is the criteria.

For example: Searching for ping pong will result in messages with the term 'ping', with the term 'pong', and with both, 'ping pong'.

While searching for "ping pong" will only result in messages with the term 'ping pong'.

Searching with wildcards: Searching for example.\* will produce results of 'example.com, example.org, example.edu', and 'example.'.

In general, if multiple search terms are desired, move to the advanced search option. After search terms and a date range has been applied, select the 'Search' button.

# **Advanced Search**

Reta			Advanced Search		
Search In	Condition		Keyword	Connector	
•		•		-	-
•		•		•	
-		*		-	
•		-		•	·
Specify the Da	ge	ppoint	Appointment     Task ments, Tasks or Notes		
Starting bet	ween 4/2	1/201	7 🗐 🕆 and 4/21/2017 🗍 🕆		
- End Date Ran					
Ending bet	ween 4/2	21/201	7 🛒 and 4/21/2017		
Status Openeo Private		_	Read: Doesn't matter	•	
					_

The advanced search allows for more control in the search process.

The 'Search in' drop-down menu allows for customization of the limiting function of the keyword.

Content
Sender email
Sender name

File name

- Content
- Sender email
- Sender name
- Recipients

- Subject
- File name

The condition field restricts the condition of the data items in the Retain Message Store.

Contains (exact) Contains (fuzzy) Starts with Ends with Does not contain

- Contains (exact)
- Contains (fuzzy)
- Starts with
- Ends with
- Does not contain

Finally, the Connector setting allows for the logical connection between criteria.

A MUD.	
IAND -	
IDB	

And

Or

The "+ and -" buttons to the right of the window allow the user to add multiple search term lines. There is no limit to the amount of lines, or criteria, which may be added.

The Message type option allows the search to be limited to the specific selected type or types. (Note, Appointment, Task, or Mail)

The Date Range is designed with appointments, tasks, and notes. If the date range is used, the range for the desired date applies. This is essentially a date range for the date ranges. This is a good way to look for tasks and appointments which were placed into the system before, but not removed later.

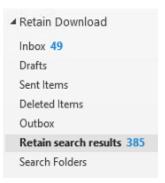

Created

Stored

The Status restriction allows the user to search for messages with a specific message state; opened, read, and private.

Once the search terms are satisfactory, select the 'Search' button to begin the search. Once the search has completed, the resulting group of messages is added to the Retain local archive, under the 'Retain search results' folder.

**NOTE:** It is important to note that the number outside the folders represents the 'unread' message count, not the total message count. To view the total message count, see the 'Items:' count at the bottom left of the Outlook window.

# **Quick Search**

The Retain ribbon contains a quick search field, which performs a simple search of last six months of the user's downloaded archive right from the ribbon without opening any additional windows. Simply place the desired criteria in the field and click on the 'Quick Search' button. Results will be displayed the same way they are for the Easy and Advanced search. In addition, the Quick Search supports the same wild-cards.

# **Retain Outlook Plugin Settings**

The Plugin settings button opens the plugin settings window. This is where the user can modify the basic plugin settings.

Setain Plugin Settings	×
Retain Server URL: http://151.155.183.140	
Plugin Type	
☑ Retain Download	
☑ Retain Archive	
☑ Launch Retain	
Outlook Integration Settings	
Synchronize on Startup	
Auto-Synchronize Every 3 Hour(s)	
Language English -	
Save Cancel	

This window contains all connection and plugin settings. If the entries here are grayed-out, then the ability to change the settings has been disabled during install, and the setting information is display-only.

The connection URL should be specified with just the hostname or IP address. If a port number is required, it may also be specified, but is not necessary if Apache or IIS is handling requests for the Retain Server.

Whether the Retain Download section or the Retain Archive section is visible is controlled here. The plugin may be set to automatically download messages from the archive on startup, or at a set time interval, to ensure that the plugin shows what is present in the Retain Archive.

The Launch Retain button will cause the default browser to open to the Retain Server URL.

The Language set in the Plugin Settings will change the displayed language for all Retain plugin displays.

## Data File

The Retain Outlook plugin stores the downloaded data in the user's folder. You can find this location by right-clicking on the Retain Download folder and selecting *Data File Properties*.

It will be generally found in C:\Users\[userName]\Documents\GWAVA\Retain.nst

# **Log File Location**

The plugin will create a log file if the folder C:\temp exists.

For example: C:\temp\WrapPST.txt

# **Outlook Plugin Silent Install**

The Retain Outlook plugin can be deployed across your network with a Windows policy.

# **Command Line Install**

**Prerequisites**: To install the MSI, two packages must be installed. These packages are included in the bundle which is an EXE, not an MSI. If either of these are missing the install will fail.

- Microsoft .NET Framework 4 Extended
- Microsoft Visual Studio 2010 Tools for Office Runtime.

If you open a non-admin command prompt, you will be asked to provide Administrator level credentials to proceed with the install.

The plugin is designed to be installed via command line silently. To do this, open a Command Prompt and run the .msi file and add a /q then enter the settings desired from the following:

RETAINURL: The Retain server URL http://<Retain\_Server\_Address> no trailing slash. For example: http://retain.company.com. Default http://RetainURL

MAXSYNC: Maximum integer number of items to be synced in every synchronization. Default 50.

MAXSEARCHRESULTS: If using the Retain search feature, the maximum integer number of items that will appear in the results. Default 500.

USERNAME: The username of the user (generally the user's email address).

MESSAGESYSTEM: The type of messaging system. Values:

0-> Exchange

1-> GroupWise

FILTERTYPE: Filter messages based on the type during the synchronization.

It uses bit pattern to store the values:

0-> 0000-> No filter (All types)

- 1-> 0001-> Mail
- 2-> 0010-> Appointment
- 4-> 0100-> Note

8-> 1000-> Task

#### COMBINE THE BIT NUMBERS TO HAVE MULTIPLE VALUES SET

3-> 0011 -> MAIL & APPOINTMENT

#### 6-> 0110-> APPOINTMENT & NOTE

15-> 1111-> ALL FILTERS

ARCHIVEFILEPATH: The path and the file name of the desired local NST file. The path should exist but **not** the NST file itself.

ISWEBUI: Use the new Retain login within Outlook. Boolean value. Default true.

ISNATIVE: Download Retain files into Outlook, original plugin style. Boolean value. Default true.

HASAUTOSYNC: Enable auto synchronization to Retain. Boolean value. Default true.

SYNCINTERVAL: How often to automatically download new items, in hours. Default 3.

SYNCSTARTUP: Enable Synchronize on startup. Boolean value. Default true.

DAYSAGOARCHIVED: Synchronize messages older than x days ago

CANCHANGESETTINGS: Enable the right for the user to change settings. Boolean value. Default true.

SCOPE: Install just for one or all users on the machine. perUser or perMachine. Default perMachine.

Here is an example of the command line that could be used. Using the /qb option will present a progress prompt, but is not required. Adding the  $/I^*$  will output a log for troubleshooting.

msiexec /qb /l\* plugin.log /i "Retain Outlook plugin\_x86.msi" /norestart ARCHIVEFILEPATH="C:\Users\UserName\My Documents\RetainLocalStore.NST" RETAINURL=http://10.1.43.17/ MAXSYNC=200 DAYSAGOARCHIVED=0 DURATION=7 RANGE=2 USERNAME=UserName@company.com MESSAGESYSTEM=0 FILTERTYPE=6

# **Group Policy Install**

You can use an AD Group Policy to install the Outlook Plugin. You may use MS System Center Configuration Manager (https://www.microsoft.com/en-us/cloud-platform/system-centerconfiguration-manager) using this as a template (https://support.office.com/en-us/article/Deploy-Office-365-ProPlus-with-System-Center-Configuration-Manager-4dd6a023-0a5d-4dc9-9badff70e01840b8) or a third-party program such as Orca (http://www.klaus-hartnegg.de/gpo/ orca.html) to adjust the settings in the MSI file for your organization. Orca is a third-party program that allows you to set parameters within an MSI file.

- 1. Download the correct Outlook plugin MSI file that you need for your installation from the Tools menu. Make sure you get the 32bit or 64bit version that corresponds to your version of Outlook, *not* your operating system. If using Outlook 32-bit on Windows 64-bit, use the 32-bit plugin installer.
- 2. If using Orca, download Orca (http://www.klaus-hartnegg.de/gpo/orca.html) and install it on the computer where you have your newly downloaded MSI file.
- 3. Run Orca and open the MSI file that you wish to make the changes to.

File Edit Tables Transform Tools View Help	E		Untitled - Orca				++	- • ×

- 5. After you have made the changes, save the amended file and close Orca. Now you are ready to deploy the MSI file in your group policies across your network.
- 6. Make sure that the prerequisites: October 2017 Office and Windows updates, Visual Studio Tools for Office v. 4. and Net 4 or higher are installed on the workstations.
- 7. Setup the Group Policy (https://support.microsoft.com/en-us/help/816102/how-to-use-group-policy-to-remotely-install-software-in-windows-server) in Active Directory.

# **Retain Outlook Plugin Single Sign-On**

The Retain Outlook Plug-in can be enabled to use Single Sign-On (SSO) so users can connect to Retain from within Outlook without being prompted to log into Retain separately.

NOTE: These instructions require the Retain Server to be hosted on a Windows server.

You are expected to have some knowledge about setting up a user with OpenSSO (https:// docs.oracle.com/cd/E19681-01/820-3885/gimmi/index.html) and Keytab (https://docs.oracle.com/ cd/E41633\_01/pt853pbh1/eng/pt/tsec/ task\_GeneratingtheKeytabFileandMappingtheServicePrincipalName-8371d4.html) files.

You will need to create an Active Directory Retain Single Sign-On user (retainsso) that will handle the single sign on, generate a keytab file, update Retain's kerberos.properties file and configure the client workstation, the steps will be shown below.

To enable the Retain Outlook Plugin with Single Sign-On you will need to follow these steps:

#### Prerequisites

Complete these prerequisites before beginning.

- Retain Server must be hosted on Windows.
- The Retain server must be connected to the same domain as the Single Sign-On user you will be creating.
- The workstations running Outlook with the Retain plug-in must be connected to the same domain as the Single Sign-On user you will be creating.
- You will need to know the realm or FQDN of your Exchange server, for this example "exchange2013.qa.example.com".

### **Create the Single Sign-On User**

Create the SSO user:

- 1. On the Active Directory Domain Controller server, logged in as a domain admin, open "Active Directory Users and Computers".
- 2. Create a new user, (Actions menu | New | Users) with the following attributes, with your domain information filled in instead of the sample information:
  - First name: retainsso
  - User login name: HTTP/retainsso.exchangeserver.example.com. For Example: HTTP/retainsso.exchange2013.qa.example.com
  - Pre-windows logon name: retainsso
  - Set password: Specify an appropriate password
  - Enable: Password never expires
  - Disable: User must change password at next logon
  - Disable: Use Kerberos DES encryption types for this account
  - Disable: This account supports Kerberos AES 128 bit encryption
  - Disable: This account supports Kerberos AES 256 bit encryption
  - Disable: Do not require Kerberos preauthentication

#### Associate the Single Sign-On User With the Service Principal Name

Associate the Single Sign-On User with the Service Principal Name (SPN) (https://technet.microsoft.com/en-us/library/dd632778.aspx)

- 1. On the Active Directory Domain Controller server, logged in as a domain administrator, open a command shell.
- 2. Enter the following command, with your domain information filled in instead of the sample information: setspn -A HTTP/ retainsso.exchange2013.qa.example.com@EXCHANGE2013.QA.example.com retainsso

- 3. View the SPN registration (https://social.technet.microsoft.com/wiki/contents/articles/ 717.service-principal-names-spns-setspn-syntax-setspn-exe.aspx) by entering the following command on the command line: setspn -L retainsso
- 4. If these steps have completed without error, then the SPN has been successfully setup.

### **Create the Keytab File**

Create the keytab file. For more information see: (https://blogs.technet.microsoft.com/pie/2018/01/ 03/all-you-need-to-know-about-keytab-files/):

- 1. On the Active Directory Domain Controller server, at the command line prompt, enter the following updated with your domain information filled in instead of the sample information: ktpass /out retainsso.keytab /princ HTTP/ retainsso.exchange2013.qa.example.com@EXCHANGE2013.QA.example.com / mapuser retainsso /mapop set /pass Password1 /crypto ALL /ptype KRB5\_NT\_PRINCIPAL
- 2. That command will generate a file with the name retainsso.keytab at the location of command line prompt's current working directory.
- 3. Store the keytab file in a secure location that the Retain Server has full access to or the keytab may be copied to the Retain Server
- 4. Verify that the SSO user has been successfully configured by logging onto any machine on the domain with that user.

#### Create the krb5.ini File

- 1. On the Retain Server, create a new file and name it krb5.ini.
- 2. Add the following details to the krb5.ini file, with your domain and server information filled in instead of the example domain and server information:

```
[libdefaults]
  default_realm = QA.example.com
  kdc_timesync = 0
  forwardable = true
  proxiable = false
[realms]
    EXAMPLE.COM = {
      kdc = exchange2013.qa.example.com
      admin_server = exchange2013.qa.example.com
    }
[domain_realm]
  .qa.example.com = QA.example.com
    qa.example.com = QA.example.com
```

NOTE: The file is case sensitive, so make sure you use the same case as the example above.

- 3. Save krb5.ini in the same location as the ".keytab" file.
- 4. Provide full File Permissions to the krb5.ini file to the Retain Server.

### **Configure Retain Server for Single Sign-On**

The Retain Server needs to be configured properly for Single Sign-On:

- 1. On the Retain Server, Confirm that the Retain Server is in the same Domain from which the Kerberos authentication is done.
- 2. The computer name of the Retain Server must match the SPN username. In this example, "retainsso"
- 3. Place the keytab and "krb5.ini" files created previously in C:\Windows on the Retain server.
- 4. On the Retain server, browse to the kerberos.properties file. By default, the file is found in C:\Program Files\Beginfinite\Retain\RetainWebUI\src\main\webapp\WEB-INF\cfg\kerberos.properties
- 5. Edit the file: kerberos.properties.
- 6. Set kerberos.Server.Principal.Name to the retainsso User Logon Name from above. For example: HTTP/retainsso.exchange2013.qa.example.com
- 7. Set kerberos.Keytab.Filepath to the location of the retainsso.keytab file from above. The path should use forward slashes (/) instead of back slashes (\).
- 8. Confirm there are no trailing spaces on any line in the kerberos.properties file. Especially at the end of the SPN name.
- 9. Save the kerberos.properties file.
- 10. Confirm that the Retain Server has access to the directory where ".keytab" and "krb5.ini" are mentioned in the kerberos.properties file.
- 11. Restart the Retain Tomcat service. See "Starting and Stopping the Retain Server" in *OpenText Retain CE 24.1: Installation and Upgrade*.

### **Configure the Client**

Each client workstation needs to have Integrated Windows Authentication configured. Outlook and the Retain Outlook Plugin should already be installed.

**NOTE:** You must perform this procedure for each end-user computer where you want to provide single sign-on access to Retain Web UI.

On the workstation users will be using Single Sign-On:

- 1. Open the Internet options control panel.
- 2. Click Security
- 3. Click Trusted Sites > Sites.
- 4. Add the DNS name of the identity applications server. For example: retainsso.exchange2013.qa.example.com
- 5. Click Add, then click Close.
- 6. Click Custom level...
- 7. Under User Authentication, select Automatic logon with current user name and password.
- 8. Click OK.
- 9. In Internet Options, click Advanced.

- 10. Under Security, select Enable Integrated Windows Authentication.
- 11. Verify that Single Sign-On is working by opening Outlook, connecting to the Retain archive, selecting a local Outlook folder and then back to the Retain archive.

# **Outlook Plugin**

Open Outlook and a new tab will appear on the ribbon called: Retain.

The first time you start Outlook after the installation of the plugin there will be a dialog box that appears asking for your login credentials.

Jsernan	ne	-
asswor	d	
English		~
	Log In	
	OR	
n	Login with Office 365	

## **Outlook Account Setup**

If necessary, you may need to set your account information in the Download Settings | Account Settings section of the ribbon.

To enter your log-in credentials:

- 1. Go to the Retain tab
- 2. Select "Download settings"

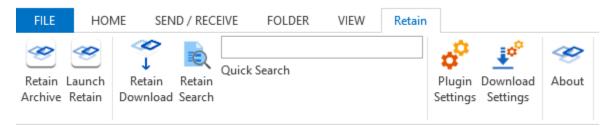

- 3. Then click the "Account settings" button
  - a. Enter your Username which is your logon name from Active Directory (AD) for Exchange including the domain (George@example.com) or your username from GroupWise (George).
  - b. Enter your password.
  - c. Select the messaging system you wish to connect to.
- 4. Then click Save.

Save Cancel

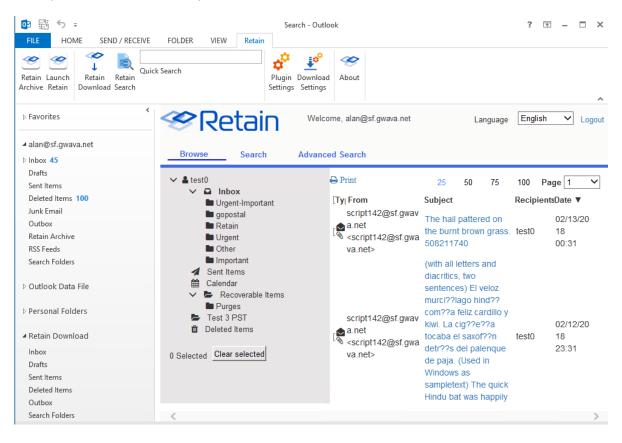

**NOTE:** It is not recommended to exceed 3 months or 5000 messages, because the file becomes too large for Outlook to serve.

# **Retain Archive**

The Retain Archive button is simply a portal to the Retain web interface.

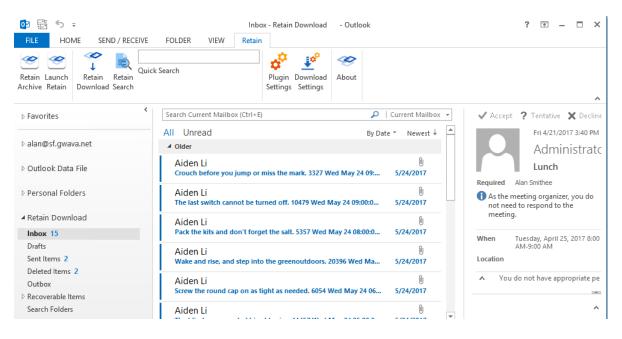

A new folder called Retain Archive will also be created at the Inbox level of your local folder. This will allow you to Browse or Search your Retain archive mailbox.

# **Retain Download**

Once the connection is made a new folder will show up in your left sidebar. It will be labeled "*Retain Download*" which gives you access to your Retain archive mailbox.

Outlook will download a copy your archived messages to your local drive, just like a normal Exchange archive mailbox. Depending on the settings you chose in the Download Settings (see Figure 1).

This can be very useful after a migration (for example, from GroupWise to Exchange). You can choose to download the messages Retain archived from the GroupWise system so you can see them in Outlook.

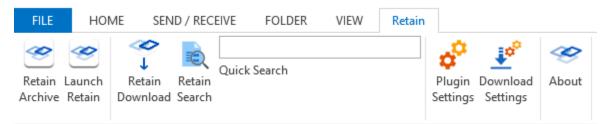

The Retain Download folder does not allow you to move messages between folders, an error dialog box will appear. Retain is not a email management system, it is only archiving.

Automatic download is useful for having easy access to past emails you have removed from Exchange to keep your inbox clean.

## **Retain Search**

This is the main function of the Retain Outlook Plug-In, and what you use most often.

There are two ways to do a Retain search: Quick Search and the Retain Search button.

### **Quick Search**

Quick Search will perform a search on the last 6 months of messages in your Retain Download Folder on your workstation. The results will be shown in the Retain search results folder. This is different from Outlook's search which only applies to messages that are on your local computer.

#### **Retain Search Button Easy Search**

Easy Search Advance		Easy S	Search	×
Keyword	poor Alice			
From Date	10/21/2016	To Date 4/	21/2017	
		Search	Cancel	
		Search	Cancel	

With the Retain Search button the Easy search is as simple as it gets, you give it a keyword and a date range and it will search To:, From:, Subject:, and message contents fields for the keyword. By default "To date" will be today's date and the "From date" will be 6 months ago. Clicking on the calendar icon will allow you change the dates.

#### **Retain Search Button Advanced Search**

With the Retain Search button the Advanced search allows for more precision in how you search for a message. This is very useful if you know who it came from or where a particular keyword is or when it was sent.

You can use the various fields to narrow the search focus.

#### Search In

- Content
- Sender email
- Sender name
- Recipients

- Subject
- File name

#### Condition

- Contains (exact)
- Contains (fuzzy) (not recommended for use)
- Starts with
- Ends with
- Does not contain

#### Keyword

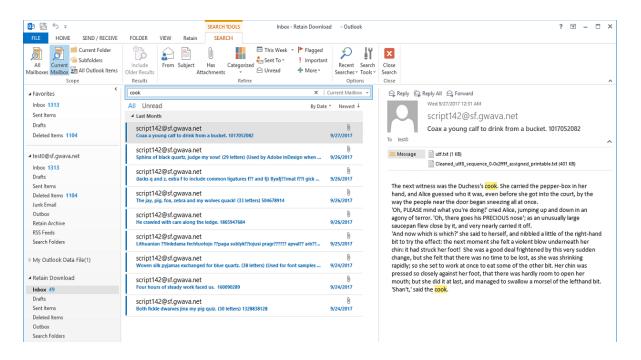

• This is the word you are looking for.

#### Connector

- AND (returns messages that contain all of the keywords)
- OR (returns messages that contain any of the keywords)
- By default, the "To date" is be today's date and the "From date" will be 6 months ago. Clicking on the calendar icon will allow you change the dates.

# **Outlook Search**

If you have used Retain Download and had your archived messages downloaded into Outlook. You can then use Outlook's search to further refine your search. For example, if you remembered you received a spreadsheet at the end of last quarter, you could download items from the archive from that time period and then use Outlook's built-in search capability to find the word "cook" because you remember that was part of the message.

#### **Outlook Calendar**

Retain archives calendar items and it can be shown side-by-side to your Exchange calendar.

Click the checkbox to enable the Retain Download calendar.

## Other buttons under the Retain tab

The Retain ribbon has a number of available functions. These may be restricted by your System Administrator.

The other buttons under the Retain tab:

- *Retain Archive* will open your Retain archive mailbox in your browser.
- *Retain download* will manually download messages from Retain if you want to update right now.
- Quick search will perform a search of the last 6 months of your downloaded messages.
- *Plugin settings* is where you set the URL to the Retain Server and other settings like Language. Generally, only your system Administrator will need to change these settings.
- Download settings allows you to customize how many and how often messages are downloaded.
- About tells you which version of the plugin is installed.

#### **Download Settings**

From this dialog box you can set certain behaviors for the Retain Outlook Plugin.

Retair	Do	wnload Setting	s 🗙
Download 5	Month(s) • of N	lessages Older Than 0	Days
☑ Limit the Number of Limit the Sear		Messages Messages	
☐ Filter by the Type of	the Message		
☐ Mails	Appointments	□ Notes	□ Tasks
Save	Cancel	Account Settings	Clear Local Archive

*Download:* The number of Days, Weeks, Months, or Years of data to download can be set. Default, 5 Months

*Messages Older than:* How many days back that can be ignored can be set as well. For example, you might want to look back into the archive for 3 months of items but you don't need the last 30 days. Default, 0 Days.

*Limit the Number of Messages to:* How many messages to download to you workstation. Outlook does not like to deal with very large local storage files so it is best to keep this number small. Default, 50 messages.

*Limit the Search Results to:* This will limit the number of messages downloaded after a search. Default, 500 messages

*Filter by the Type of the Message:* You can restrict the plugin to Mail, Appointments, Notes, and/or Tasks. With this optioned checked, you will have to check which items are to be downloaded. Default, all unchecked, so all items will be downloaded.

*Clear Local Archive:* This will empty the local archive folder on your workstation of all items, and folders except the default set of folders. To remove all folders the plugin will need to be uninstalled.

#### **Plugin Settings**

This dialog box allows more general changes to the Retain Plugin.

≪ Re	tain	Plu	jin Setting	js	X
Retain	Server URL: htt	p://151.15	5.183.140		
– Plugi	n Type ☑ Retain Down ☑ Retain Arch ☑ Launch Reta	ive			
Outlo	ook Integration Set	on Startup			
Langu	age English	•			
	Save		Cancel		

*Retain Server URL:* This is the IP address or Host name of the Retain Server where the archive is stored. Your system administrator will provide or set this for you.

*Retain Download:* This allows the plugin to add the Retain Download folders to Outlook.

*Retain archive:* This enables the *Retain Archive* button that opens your Retain archive mailbox.

If Outlook Integration is enabled:

*Synchronize on Startup:* When Outlook starts up, the plugin will check for new items in the Retain Archive.

*Auto-Synchronize Every "3" Hours:* The plugin will check for new items in the Retain archive every 3 hours by default.

# **Uninstall Retain Outlook client Plugin**

To uninstall the plugin

- 1. Go to right-click (Win7/8) Start | Control Panel | Programs | Uninstall a program or (Win10) Start | Apps and Features
- 2. Select the Retain Outlook Plugin
- 3. Choose Uninstall.

# **Outlook Web App Plugin**

The Outlook Web App plugin utility adds a Retain Archive auto-logon button to user's Outlook Web App window.

**NOTE:** Outlook Web App was called Outlook Web Access in versions of Microsoft Exchange earlier than Exchange 2010.

The OWA Plugins are found on the tools page. To access the tools page, select the 'tools' link from the top right of the Retain Server administration page.

Language English 🛛 🗸 🕪 Welcome, admin | About | <u>Tools</u> | Status & Updates | Logout

# System Requirements

Exchange 2007, 2010, 2013, 2016, or 2019

There are two versions of the Outlook Web App plugin: the Outlook Web Access plugin for Outlook versions 2007 and 2010, and the Outlook Web App plugin for Outlook versions 2013 and 2016. Make sure to download the correct plugin as dictated by the Outlook Web App version.

# Installation

To install the plugin, download and run the appropriate plugin installation files on the Outlook Web App server.

On initialization, the installation allows language selection.

The installation then begins. Select 'Next' to continue.

System space requirements and installation path are displayed. The installation path needs to be the location of the OWA folder. Default path for Exchange 2013 is displayed.

C:\Program Files\Microsoft\Exchange Server\v15\ClientAccess\OWA

# The Plugin in the Outlook Web App

If you did not make the plugin mandatory, the plugin may not be active:

• Click the gear icon near the top right next to your users name and select "Manage apps...".

- A list of apps available to the users will be listed. Notice that Retain App is available but disabled. Select the Retain app and in the right sidebar, click the Enable link.
- Navigate back to your inbox with the right arrow or by clicking on your username and choosing My Mail.

Using the plugin:

- Browse to any message. Within the Viewer pane on the right or if you open the message in its own window, you will see a Retain link inside a grey bar.
- Clicking the link will reveal a Retain logo image and clicking on that will open a new window to the Retain archive.

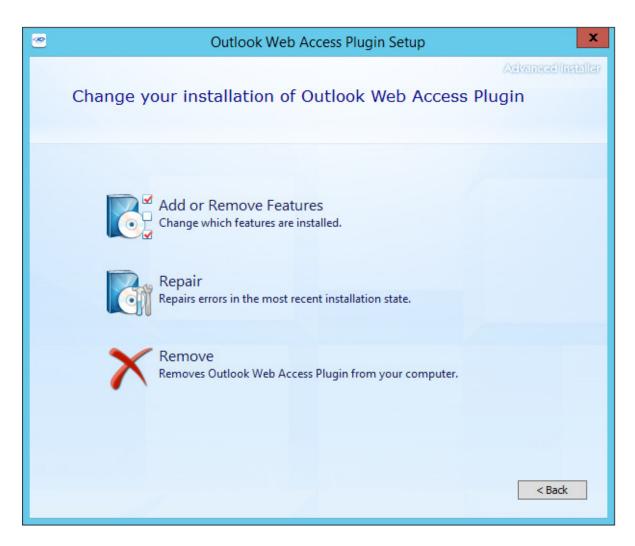

'No, I give it up,' Alice replied: 'what's the answer?' 'I haven't the slightest idea,' said the Hatter.

## Change Features, Repair or Remove the Plugin

To add or remove features, repair or remove the plugin, run the installer on the Outlook Web App server again. The plugin will detect that it is currently installed and give you these options:

- Add or Remove features will allow you to adjust the features installed to the plugin.
- Repair will refresh the installation of the plugin.
- Remove will delete the plugin.

If you entered incorrect data or changed the location of the Retain server, you will need to uninstall the plugin and then re-install to enter the correct data.

# **Retain PST Importer**

The Retain PST Importer is a tool which inputs mail from PST archives into the Retain system. The PST Importer is a utility which is installed on a Windows machine, local to the PST archive and works in coordination with the Retain Server.

The Retain PST Importer is found on the tools page. To access the tools page, select the 'tools' link from the top right of the Retain Server administration page.

## **System Requirements**

- Windows 8.x, 10.x, 11.x
- Open and direct network connection to the Retain Server

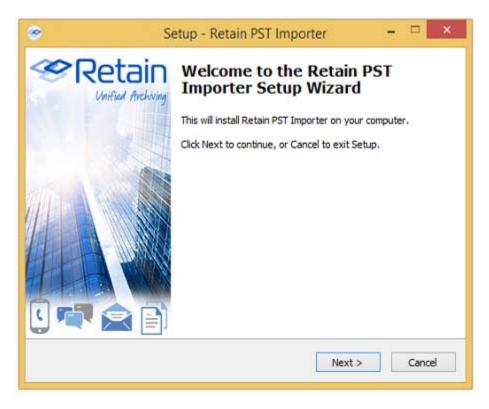

• JDK 11.0 and above (No other Java can be present on the system.)

**NOTE:** If the appropriate version of Java is not present in the system or the available Java version is lower than 11, the Importer install will not start and will prompt to download JDK 11 installer. Select the appropriate version (32 or 64-bit), download and install it.

# Installation

Installation of the PST Importer is simple. Locate the 'Retain PST Importer Install.exe' file and run it.

Once initialized, the installation will display this page. Select 'Next' to continue.

Accept the License agreement and select 'Next' to continue.

### **Configuration and Use**

The PST Importer requires a Worker configuration and a bootstrap file to know where and how to communicate with the Retain Server. A new worker must be created, configured, and the configuration file loaded into the PST Importer. Follow the steps below.

 In the Retain Server administration console, create a new Worker. It would be appropriate to name it 'Importer' or 'pst importer' for ease of remembrance, but any name desired will do. Remember that this worker should never be configured with any jobs in the Retain Server. A general configuration is all that is required; no specific settings need to be changed from default, except the connection information if it needs to be modified in accordance to the needs of the local network. It is imperative that the PST Importer has an open connection to the Retain server. When the settings are correct, save the new Worker.

orker PST importe	r			
Polling Logging	Connection	Module specific	Status Bootstrap	
Server Connectio	n			
				mmended that you use a DNS host name for the Host Name. It's important to note that you are specifying the any or may not match the URL you'd use from your browser to reach the Worker or Server.
For administrators u you must know this		nterface, note the wo	orker password assigne	ed must be the same for each worker that contacts the Reload Server. As part of setting of the Reload Server,
Server Protocol	http 👻			
Server Host Name	10.1.10.20			
Server Port	48080			
	48080 /RetainServer	_		

2. Download the bootstrap file.

Worker F	PST importer

Downlo	ad File						
	wnloaded: ne ID: A6C267C		B82DFCF59733A				

3. Run the PST Importer utility. Locate the Retain PST Importer icon or start menu item and run the program.

On initial startup, the Retain PST Importer opens to the configuration page. The worker configuration file contains all the connection information for the Retain Server. (If the location changes, the worker configuration file will need to be re-downloaded.)

👁 Retain PST Importer		- 0 <b>- X</b>
Retain		
PST Files Retain Server Connection		
URL to connect to Retain Server Worker name		
Path to Retain Worker configuration file		-
Start Cancel	Ver	rsion: 4.0.0.407

4. Upload the Worker Configuration file to the PST Importer.

Select the Retain Server Connection tab, where the bootstrap file is specified and select the 'folder' to browse to the file location. Select the appropriate worker configuration file and load it into the Import tool.

### Use

Use of the PST Importer is very simple. The PST Importer tool may be restricted to import only messages in the archive which fall into a specified date range or it will attempt to import the entire archive. The PST Importer may be restricted to import only messages which meet selected criteria:

- A specified date range (inclusive)
- Before a specified date (exclusive)
- After a specified date (exclusive)

😻 Retain PST Importer			- 0 X
Retain			
PST Files Retain Server Connection			
Date Range of Items to Archive			
Process all messages in the file regardless of the date			
Only process messages Within	and		
Email Notification			
Send email report when import finishes Configure			
Archive Files Location			
Add Remove All			
File Path	Email Address	Progress	Action
Start Cancel		N	/ersion: 4.0.0.407

If desired, the PST Importer may send a notification message when the job is complete. The email will contain a job summary including:

- The total number of messages selected for import
- Number of successfully process messages

• Number of messages not processed

Configure Email	
SMTP Mail Server	
SMTP Security Protocol	Unencrypted 👻
SMTP Port	
SMTP Mail From Address	
SMTP To Address	
SMTP Username	
SMTP Password	
Test Connection	Ok Cancel

To receive a notification email, an SMTP connector needs to be specified and settings provided. Security protocol options are: 'Unencrypted, TLS, and SSL'. Test the connection to ensure the settings are correct.

When the desired archive or archive have been added and settings have been configured, select the 'Start' button to begin importing the archive. Rolling information is displayed in the information window at the bottom of the screen.

To add or remove an archive to or from the PST Importer tool, use the 'add' and 'remove all' buttons at the top of the archive window.

Adding an archive opens a browse window to allow selection of the archive. Adding an archive requires the selection of the desired messaging system, (select the system the user will be using so messages will be added to their archive). The user can select the file name pattern corresponding to the PST archives and whether to import the archive into existing root folders or to have the tool import the archive in to automatically created subfolders.

Users can import messages from the PST archive for either existing users in Retain, or if the user does not currently exist in Retain, it will be automatically created.

🗢 Add PST Files	<b>X</b>			
Messaging system	GroupWise			
File name pattern	<email address="">.pst</email>			
👽 Create root folder	PST imported data			
Add files in sub-folders	Browse			
Create users in Retain if they don't exist				
Ok	Cancel			

When complete, select 'Browse' button to browse to and select the archive. Hovering over the path will show the complete path.

To remove all the archives from the list, select 'remove all'.

### Logs

Log files are generated and placed in the following default location:

C:/Users/<username>/AppData/Roaming/GWAVA/Retain PST Importer

This can be reached by typing %APPDATA% in the File Explorer address bar.

## **GroupWise WebAccess Plugin**

**IMPORTANT:** The Retain Plugin for GroupWise WebAccess doesn't work in GroupWise version 18.3 and later.

### **Overview**

The Retain for GroupWise WebAccess Plugin is a quick and effective way to integrate access to the Retain archive into WebAccess for users. The Plugin adds a button which will automatically take users to their personal archive. The archive interface will be displayed inside the WebAccess window, and provides all the same access and management of the archive which users can experience by directly logging in to Retain.

The GroupWise WebAccess Plugin is found on the tools page. To access the tools page, select the 'tools' link from the top right of the Retain Server administration page.

### System Requirements

**IMPORTANT:** The Retain Plugin for GroupWise WebAccess doesn't work in GroupWise version 18.3 and later.

The plugin servlet is installed and run on the GroupWise WebAccess server.

- GroupWise WebAccess 8.x, 2012, 2014, 2014 R2, 18
- Functioning Retain Server, with configured GroupWise module
- Open network connection to the Retain Server
- If SSL is to be used on the web server, either IIS or Apache, then SSL must be enabled on the Retain server as well.

### Installation

To install the plugin, execute the installation file.

#### Linux:

Linux requires root access to install the plugin. Change the files to executable and run the files.

- chmod +x \*.sh
- ./installgui.sh (if a graphical install is desired)

or

./installtext.sh (if a text install is desired)

#### Windows:

On Windows, double click and run the .bat file.

install.bat

#### **Graphical install shown**

1. Click 'Next' to begin the installation

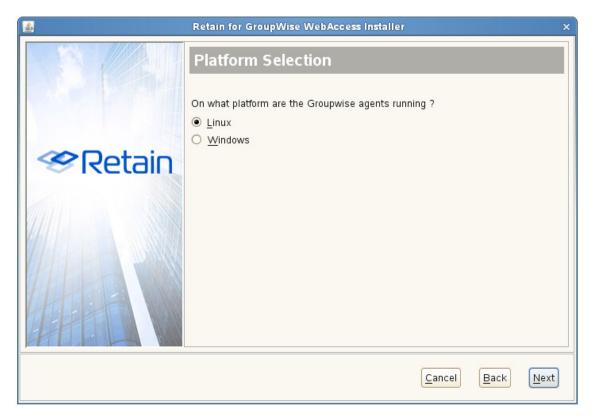

2. Accept the license agreement.

3. Select the GroupWise WebAccess version. GroupWise 8 or older, or GroupWise 2012 or newer.

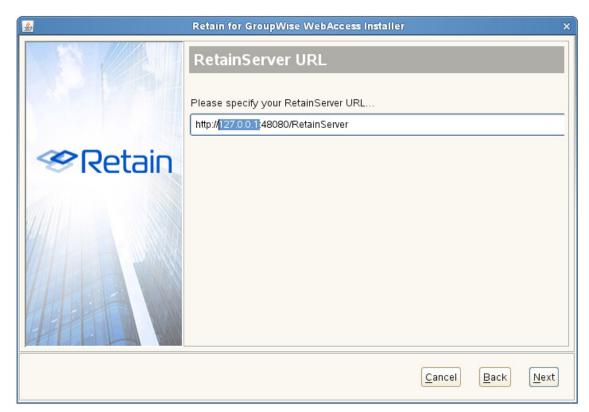

4. Select the platform the WebAccess is being installed to. Linux or Windows.

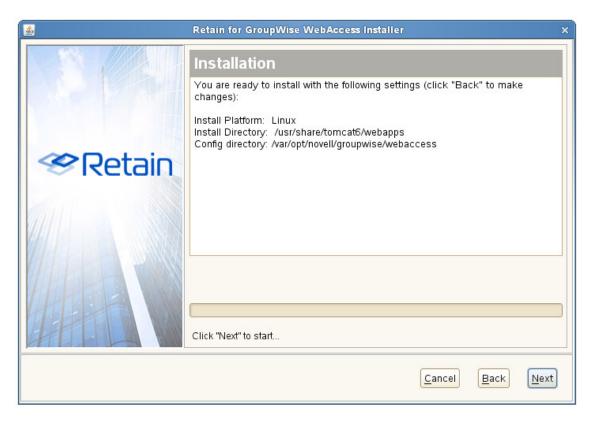

5. Specify the active ...webapps/gw directory, or browse to it.

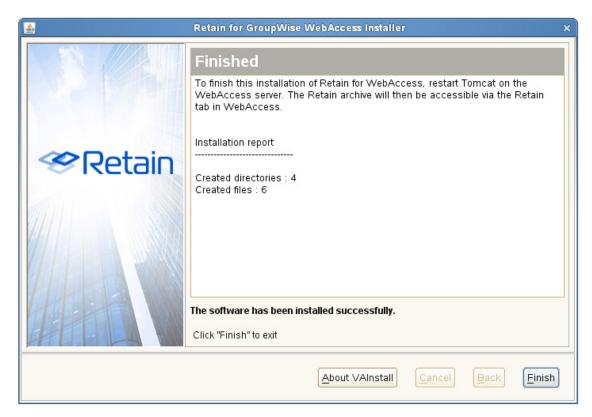

6. Specify the Retain Server URL. An open connection to the Retain Server is required for the plugin to work.

7. Confirm the settings. Click 'Next' to begin the install, or 'Back' to change the settings.

8. Once finished, click 'Finish' to exit the installer.

## **Post Install Tasks**

Once the plugin is installed the final step to install the WebAccess plugin is to create two folders in the Novell folder structure.

Retain cannot create folders or set permissions on the host system, but requires the folders to be created in the Novell directory structure to function.

#### Linux

Retain requires two folders to be created, as well as the permissions set to match, on the GroupWise server.

#### Browse to:

/var/opt/novell/groupwise/webaccess/retain/templates/webacc

Create two new folders here: 'mobile' and 'simple'

mkdir mobile

mkdir simple

• Note the file permissions and owner of the 'css' folder, and change the permissions of the two new folders to match.

### Windows

Two folders need to be created on the GroupWise server. From where GroupWise was installed, browse to the webacc folder. For example,

C:\GroupWise\webaccess\retain\templates\webacc

• Create two new folders here: 'mobile' and 'simple'

mobile

simple

• Restart Tomcat and the plugin installation is complete

## Confirmation

The plugin is now installed. Once WebAccess has been restarted, simply login as usual.

After logging in, users will see the interface they usually see, with an additional 'Retain' tab on the end of the top ribbon.

Mailbox	Calendar	Contacts	Docun	nents Re	tain
Mail	- 🕓 Appo	bintment	🖌 Task	🗾 Note	🙎 Proxy

For users to access their own archive, all they need to do is click on the 'Retain' button and their archive will automatically open. Choose a folder to see the contents.

## Uninstalling the GroupWise WebAccess Plugin

- 1. Stop Tomcat for the WebAccess Application
- 2. Navigate to the WebAccess directory
- 3. Rename or remove the retain/ directory
- 4. Navigate to \srv\tomcat\4\webapps\gw\WEB-INF\classes\templates\webacc\css
- 5. Edit the caption.htt file
- At the end of the file look for the line that says: {INCLUDE retain.inc}
- 7. Comment out or remove this line
- 8. Save the file.
- 9. Start tomcat

## **GroupWise Archive Migration Tool**

### **GroupWise Personal Archive Migration Tool**

This migration tool is designed to import native GroupWise archives directly into Retain. Also known as the PAM tool.

The GroupWise Archive Migration Tool is found on the tools page. To access the tools page, select the 'tools' link from the top right of the Retain Server administration page.

### System Requirements

- A Windows workstation running GroupWise client 7.0.1 or up. GW 2014 and up use a slightly different file structure so there may be errors.
- Access to the archives you want to migrate.
- An HTTP connection to Retain.

### **Overview; Modes of Operation**

There are two modes:

1. Run at all workstations mode.

From a command line, you'll run this and it will log into the users mailbox, and then open the local archive. It will then feed messages directly to Retain.

2. Centralized run.

This only works if you have all archives stored at a central point.

In this case, one can conveniently run all of the migrations from a single workstation, and not involve the users at all.

The migration tool uses the GroupWise client to access the archives you want to migrate.

- In single-user mode, the migration tool will access the mailbox of the logged-in GroupWise user and it will read the archives available to the GroupWise client and send them to the Retain Server you specify.
- In multi-user mode, it uses the trusted application key to log in to the mailboxes of the users specified in a chosen GroupWise distribution list, attempt to access the archives defined in their mailbox and will send them to the Retain Server you specify.

### How it Works

The migration tool does not access the archive files directly. Due to the way GroupWise stores its archives, you need the GroupWise client to read the archives and to hand the data to the migration tool. The migration tool then sends the archives to a Retain Server, much like a worker would.

In normal operation, a Retain Worker reads data from the live GroupWise system and sends it to a Retain Server. With the migration tool, the tool itself is a worker that reads the archived data from the GroupWise client and sends it to a Retain Server.

The migration tool reads the path to the archives as defined in the GroupWise mailbox that you're accessing. That path must be accessible by the workstation you're on. It will then ask GroupWise to open the archives and it will read the items in the archive and send them to the Retain Server you have specified.

If you run in single-user mode, the migration tool will access the mailbox currently logged into by the GroupWise client. If none is logged in, GroupWise will be opened and you will be asked to log in.

If you run in multi-user mode, the migration tool will open GroupWise, you can be logged in as any valid user, and it uses the trusted application key to log in to each user specified in a GroupWise distribution list, one at a time.

### Prerequisites

The GroupWise client on the workstation you're using must be able to open the archives you wish to migrate. The process depends on GroupWise being able to access these archives. If you're migrating the archives of another user, as you would be doing in multi-user mode, you must be able to access that user's archives from the workstation you're on.

It is not enough that the archives are on a network-accessible volume. GroupWise must be aware of the path to these archives and that path must be available from the workstation you're going to use for migration. Refer to the error handling section for important configuration.

## Setting It All Up

In multi-user mode, you can use one workstation to migrate the archives of multiple users. In so doing, you can migrate the data without affecting the users in question. In single-user mode, you will run the migration tool on a workstation that has access to the archives you want to migrate (typically the workstation of the user whose archives you're migrating) and you'll migrate just one mailbox.

- 1. Copy the migration tool files to any directory accessible to your workstation
- 2. Log in to the Retain Server you want to migrate the archives to Create a new worker. You're not actually installing a new Retain Worker anywhere; you're creating a new bootstrap file for the use of the migration tool so it knows which Retain Server to send the archives to. Be sure the settings listed are accessible and usable by the workstation where you will be running the migration tool. The migration tool uses these settings to log into the Retain Server

Polling Logging	Connection Mo	dule specific Status	Bootstrap
	0.0		
Server connect	on		
important to note	that you are specifying		highly recommended that you use a DNS host name for the Host Name. It's of view of the Worker contacting the Server, which may or may not match the

(This window will also accept saved configurations from previous sessions.)

### **Archiving Behavior**

Add

- Date Range limits or specifies specific mail to process based on a date range.
- Archive Directory The location of the archive or archives to be migrated. The default path is assumed unless selected to be specified.
- Miscellaneous contains the options to preserve the routing properties in the archive or to add a marker file when the migration is complete.

Archiving Behavior       User Interface       Distribution Lists       User List       Errors       Logging       Connections         Date Range of Items to Archive       Image: Date Range of Items to Archive       Image: Date Range of Items to Archive, regardless of date       Image: Date Range of Items to Archive, regardless of date         Image: Only process items within a specified date range:       12/30/1899       to 12/30/1899       Image: Date Range
Date Range of Items to Archive             Process all messages in the archive, regardless of date              Only process items within a specified date range:          12/30/1899          to         12/30/1899          to         12/30/1899
<ul> <li>Process all messages in the archive, regardless of date</li> <li>Only process items within a specified date range: 12/30/1899          to 12/30/1899          </li> </ul>
Only process items within a specified date range: 12/30/1899 ▼ to 12/30/1899 ▼
Determining where the Archive directory is located
O Let GroupWise automatically try to open the archive. This assumes the archive location set in the GroupWise client options is accessible.
O Use the path specified below as the base path. All archive directories will be assumed to be direct subdirectories of this path:
Miscellaneous
Include Routing Properties?
You may choose to archive items based upon a date range, or choose to archive all messages. You also specify how to locate the archive directory. This is useful because often drive letters or paths are not consistent, or the administrator wishes to override the path. For example, the administrator
might want to consolidate all archive directories to one location, and run the migration tool from an administrative workstation rather than handing out the migration tool to each individual workstation.
Ok Cancel Version: 3.5.1.760

### **User Interface**

When the Migration Tool is Started - Begin without user intervention the archive process immediately begins without any prompts. Run minimized sets the migration utility to run the migration in the background while the workstation completes other work. The tool may also be set to run automatically on system boot, in case something interrupts the archive job.

GroupWise Personal Archive Migration Utility Configuration

## **Distribution Lists**

In order to process more than one user archive the option must be enabled at the top of this page and the users must be verified against the GroupWise system.

It is recommended to only process multiple archives from the same post office.

GroupWise Personal Archive Migration Utility Configuration Retain Archiving Behavior Liser Interface Distribution Lists Liser List Frrors Logging Connections	
Archiving Behavior User Interface Distribution Lists User List Errors Logging Connections	Refresh
FID Clash Prevention         Verify Current User Matches GW Archive         Only process users in the lists where the domain is         and the post office is         Note: GroupWise archives are identified by the user's File ID (FID). FIDs are not guaranteed unique across multiple puse caution when migrating archives from multiple post offices. Please consult the Retain General Admin Guide for mo	

The Distribution Lists will only be populated if it is enabled and if the 'Refresh' button is selected. It displays the available distribution lists. To have the connection work correctly, the GroupWise Client Parameters on the 'Connections' tab must be filled-out with the GroupWise Server IP and port. Displayed lists can be selected. The archives belonging to the users in the selected distribution lists will be migrated. If users from multiple Post Offices are to be migrated, employ some kind of FID clash protection by verifying archives or only processing users which can be verified by a specified Domain and Post Office, (specified in DNS:port or IP address:port).

### **User List**

The User List screen allows the migration of multiple users specified by a user list. The user list is a plain text file with one user ID per line. To enable the process, select the 'Enable Multiple User Processing Using a Text File checkbox, then browse to and select the desired text file.

GroupWise Personal Archive Migration Utility Configuration	
😹 Retain	
Archiving Behavior User Interface Distribution Lists User L	ist Errors Logging Connections
Enable Multiple User Processing Using a Text File	Archive Location: \OFxxxARC\
Users to Process	Options Append UserID to Archive Location Append Sub-Directories to UserID
	Use this screen to process multiple archives from a list of GroupWise user ID's. The list of users can be entered manually or from a text file. The text file should contain one user ID per line. The archives must all reside in a common location accessible from the workstation running the migration utility. A common scenario has each user's personal archive located on a file server in a home directory. If the user's directory name is the same as their GroupWise ID set a base path using the path override option on the Archiving Behavior tab and select the "Append UserID To Archive Location" check box. If the archive directory (OFxxXARC) isn't directly under the home directory but is in a consistent directory structure for all users, a sub-directory can be appended to the UserID by checking the "Append Sub-Directories" option. If the archives were copied to a common location specifically to be migrated into Retain its likely only the OFxxxARC directories were copied to the file server. In this situation use the path override as described above but don't check the "Append UserID" option.
Ok Cancel	Version: 3.5.1.760

### Errors

The error limit and actions taken when an error is encountered are specified on this tab.

GroupWise Personal Archive Migration Utility Configuration
😹 Retain
Archiving Behavior User Interface Distribution Lists User List Errors Logging Connections
When an error occurs during archiving
Write the error to the log file
Alert the user with a popup message
Send an e-mail message EMail Options
Stop archiving the current user after 0 😰 errors occur
Should an error occur during the archiving process, you may specify whether to alert the user or administrator or quietly write the information to a log or a combination of choices. You may also stop archiving the current user if the specified number of errors occur. (Enter 0 to disable this feature)
Ok Cancel Version: 3.5.1.760

Errors may be written to the log file, (specified in the next tab), sent in a pop-up message to the user, or sent as an email to the specified address.

Configure E-Mail Options

SMTP Password:	
a message via SMTP relay. The	you need to provide enough information to successfully send migration tool does not use native GroupWise notifications, ere is an error, the GroupWise client may not be functioning
	Ok Cancel

The limit of how many errors may be encountered before the migration utility quits the current user is specified. A setting of '0' sets the limit to infinite.

Important: By default, the current user will be skipped after 20 errors by default.

If an email is desired for each error encountered, email settings must be configured. Select 'Email Options 'and input the connection information, source address, destination address, and user login information for the SMTP Mail Server.

## Logging

The location, logging levels, and buffer of the logging screen are all configured on this tab.

Where Should Log Files be Stored - A specified path, the path to the current location of the application, or a specified path must be selected.

GroupWise Personal Archive Migration Utility Configuration
😹 Retain
Archiving Behavior User Interface Distribution Lists User List Errors Logging Connections
Where should log files be stored
Application Data\RetainMigrationTool
O Application Path
Selected Folder:
Amount of detail in the log files
Log Level Diagnostic 💌
Maximum Number of Log Lines to Display Onscreen: 100
Create Individual Log Files For Each Archive <userid>.log</userid>
Display URLs in Log
You may determine how much is stored in the log files, where they are located, and if a separate log should be created for each archive when processing multiple archives. Refer to the log files to troubleshoot any errors that occur during archiving.
Ok Cancel Version: 3.5.1.760

Amount of Detail in the Log Files – The logging level determines how much information is provided in the log files. Unless troubleshooting, log levels of 'normal' and 'errors only' are sufficient. The buffer size for the logging screen determines how much history the running log screen of the migration tool contains.

## Connections

This is an informational page showing the connection settings from the RetainWorker.cfg created in the Retain Server. If this information is incorrect, the Retain Server Connection settings must be modified under the worker configuration in the Retain Server, and a new bootstrap file downloaded for use.

The GroupWise Client Parameters contains the connection information used by the Distribution Lists configuration to allow the Migrator to connect to the GroupWise system.

Provide the POA IP or Hostname, GW Client Port (default: 1677), and the POA SOAP URL. (default: http://<POA>:7191/soap)

## **Running the Migration**

The migration tool uses the configuration file to run the job as you have specified in the configuration tool. You may run the configuration tool as often as you need to set up the migration job to your liking.

When run, the tool will prompt for the configuration file, or automatically load the configuration file if the configuration is found it the same directory, and immediately begin the migration. When the tool runs, you will see a screen like this:

Re Current Mailbox				Job Totals
Messages:	0	Mail:	0	Messages: 00000000 Average Msgs / sec: calculating
Trash:	0		0	Trash: 00000000 Current Msgs / sec: calculating
Processed:	0	Note:	0	Total: 00000000 Current Mailbox ETA: calculating
Existing Docs:	0	Task:	0	Existing Docs: 0 Current Mailbox:
New Docs:	0	Phone:	0	New Docs: 0 Current Folder:
Errors:	0	Other:	0	Errors: 0 Current Msg Date:

You will see any errors in this screen and it will display a notification when the job is complete.

For each user in a multi-user job, it will read the location of the archives from GroupWise and then it will attempt to open the archives. It is critically important that the workstation used for the migration can access the archive files.

## **Limit of 5 Concurrent Migrations**

There is a maximum of 5 migrations permitted at any given time. For instance, if you're running the migration tool from the workstations of your users, only 5 at a time can be migrated, the others will wait their turn. This is to prevent all the migration requests from overwhelming the server.

### **Other Notes**

The migration tool may be deployed using management tools such as Novell ZENworks. This is one method to collect archives which have been stored on users' workstations. Users may run the tool manually or it can be run automatically.

### **UUID** errors

[ERROR] Exception: Error getting UUID.

There are a various reasons for a UUID error:

• The User does not exist in the GroupWise system.

If the user does not exist in GroupWise anymore but the personal archive needs to be moved into Retain, Retain will create the user mailbox and assign it a Retain UUID (unique user ID). Thus, this is also why the address book needs to be refreshed prior to using the PAM tool. If the user exists in the GroupWise system, you would get two different user mailboxes in Retain if you archived with the PAM tool first and then refreshed the address book in the Retain system.

• The Users's visibility is set too low in GroupWise.

In GroupWise, edit the account of the user and set the visibility to System.

• Apache has been configured to redirect traffic to a secure HTTPS connection.

Edit the bootstrap file to connect to http://[Retain Server IP address or hostname]:48080 to connect directly to tomcat and bypass the apache redirect.

# **Mobile Tools**

Retain can archive messages from a mobile device.

## **RetainService Android App**

The RetainService Android App is available under the Tools menu as Android APK Retain App for Android Phones

<sup>C</sup> Tools	
Plugins	
GroupWise	
Mobile	
Retain Service	Retain App for Android Phones (version 5.0 (Lollipop) and newer)
RMA Android	RMA app for Android (version 5.0 (Lollipop) and newer)
Tools	
<ul> <li>Import</li> </ul>	

### **System Requirements**

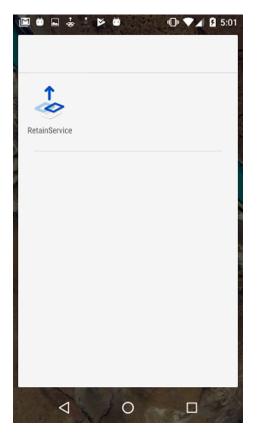

- Android version 5.0 (Lollipop) and later.
- If the user will travel internationally it is important to set the device to connect with port 80 as port 48080 is blocked by telecom companies across borders.

### Installation

Download to the mobile device manually or with an MDM. See "Creating a Mobile (Android) Module" in *OpenText Retain CE 24.1: Archiving Guide*.

### Use

Once installed the RetainService app appears.

After the RetainService app has been installed the Retain Administrator may send a registration email. This will include a JSON file with registration details.

You may be asked to log into the app the first time. This will be your email address for the user name and the Registration ID for the password.

If the administrator has the phone number of the device, a message can be sent to register the device remotely.

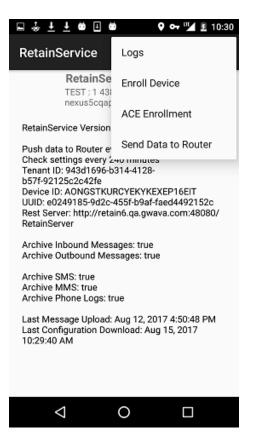

### **Main Page**

Once logged in the main page shows the settings for the app.

## **Options menu**

The options menu is available under the three vertical dots. This provides Logs, Enroll Device, ACE Enrollment and Send Data to Router.

### Logs

The logs option will show the logs.

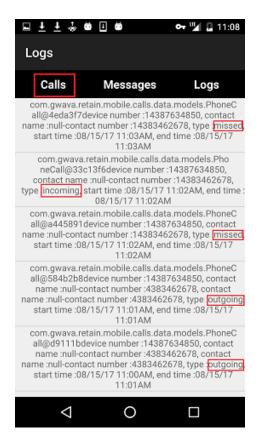

#### Logs Tab

The Logs tab will show all activity.

### Calls Tab

The Calls tab will show only the calls made.

#### **Messages Tab**

The Messages tab will show only the messages made.

### **Enroll Device**

If the device cannot be enrolled with an MDM an email can be sent with an enrollment link, which is placed here.

### **ACE Enrollment**

For use with Retain SaaS only. This provides the IEMI ID to be used with Retain Device Management.

### Send Data to Router

This option will send data to the router immediately rather then by the default schedule.

# **Retain App**

The Retain App is available on the Apple App store and Google Play store. After installing the app, enter the location of the Retain Server and the user credentials. Options can be changed under the hamburger (three horizontal stripes) menu. Once connected to Retain the user will be able to access their Retain mailbox archive. For more information see the Search User Guide "Retain Mobile Apps" on page 43

# Swagger UI

Swagger is a developer user interface for Retain's REST API.

This documentation assumes you are a developer and are familiar with REST API.

This allows the developer to get to know the API and experiment with Retain data. See Swagger.io (https://swagger.io/)for more details.

NOTE: It is recommended to use Swagger in a development environment.

### Prerequisites

The administrator will have access to this but it is recommended to grant a developer more limited rights even to a development environment.

• The developer must be granted the *Assign Rights* right, before Swagger will be visible under the Tools Menu.

GET /api/fo	oldertypes getFolderTypeInformation	
GET /api/it	emtypes gettemTypeInformation	
GET /api/ve	ersions getMajorMinorVersion	

To use an API call press the "Try it out" button.

GET /api getApiInformation		
Parameters		Cancel
lame	Description	
ppKey * required	Application key	
tring query)	appKey - Application key	
ppSecret * required	Application secret	
tring query)	appSecret - Application secret	

You will first need to press Authorize and enter a user name and password.

You will then need to provide a REST appKey and appSecret. These can be exported from a REST collector under *Server Configuration | REST API*.

Then press *Execute* to run the call.

The result will appear below the curl and Request URL.

## **Enabling Swagger**

Swagger is intended for use by developers. To prevent user access you must first enable swagger in the misc.properties file.

Linux: /opt/beginfinite/retain/RetainServer/WEB-INF\classes\config

Windows: C:\Program Files\Beginfinite\Retain\RetainServer\WEB-INF\classes\config

To enable swagger change its visibility to 1:

```
tools.swagger.visible=0
```

# **Managing Retain Language Support**

Retain is translated into 14 languages and matches these to browser settings when possible.

Users can also select any of the other 13 languages in various drop-down lists within the Retain web UI.

As a Retain Administrator, you can control which languages are listed by using the Language Editor.

- 1 Using your administrative browser, sign in to Retain as the Admin user.
- 2 Open a new tab and access the following URL:

http://retain-server-ip-or-dns/RetainServer/Util/languageEdit.jsp

The Language Editor opens, displaying a list of 18 languages (shown below). The 14 languages that have corresponding localized strings on the Retain server, are enabled for selection by Retain users in the **Expose to User?** column.

SO LangID	Description	Expose to User?	Delete Entry?
en	English	Yes 🗸	No 🗸
de	German	Yes 🗸	No 🗸
es	Spanish	Yes 🗸	No 🗸
fr	French	Yes 🗸	No 🗸
nl	Dutch	Yes 🗸	No 🗸
pt	Portugese	No 🗸	No 🗸
ru	Russian	No 🗸	No 🗸
ch	Chinese	Yes 🗸	No 🗸
ja	Japanese	Yes 🗸	No 🗸
cs	Czech	Yes 🗸	No 🗸
sk	Slovak	No ~	No 🗸
no	Norwegian	No ~	No 🗸
it	Italian	Yes 🗸	No 🗸
hu	Hungarian	Yes 🗸	No 🗸
pt_B	Portuguese (Brazil)	Yes 🗸	No 🗸
pt_P'	Portuguese (Portugal)	Yes 🗸	No 🗸
pl_Pl	Polish	Yes 🗸	No 🗸
ko_K	Korean	Yes 🗸	No 🗸

**3** To change which languages users can choose in drop-down lists, change the **Expose to User** option.

**NOTE:** Although Portugese, Russian, Slovak, and Norwegian are included in the list, Retain has no localized strings for these languages.

4 To remove a language from this list, change the **Delete Entry** choice to Yes and save your changes.

**NOTE:** Localized strings are not removed from the Retain server; only the list is affected. You can add back any languages previously removed by entering their 2-character IANA codes and appropriate descriptions.

- 5 Be sure to save any changes that you make in this editor. Otherwise, your changes are lost.
- **6** To see your changes, you must restart Retain as explained in "Starting and Stopping the Retain Server" in *OpenText Retain CE 24.1: Installation and Upgrade*.
