## Introduction

Changes to the ZENworks Asset Management database schema from version 3.3 to version 7.0 were relatively minor in scope. They fall into one of several areas:

- support for virtual machine identification
- additional password qualification parameters
- integration with ZENworks
- miscellaneous changes related to improvements in recognition
- added Notes fields in two tables in the Software Compliance Module

Generally speaking, there are no changes that should effect existing data integrations or custom reports. However, Novell recommends that you review the database changes described below in light of your custom integrations and reports prior to upgrading to ZENworks Asset Management version 7.0.

Here is a summary of the various changes:

### Summary of Table Additions

One table was added for the virtual machine identification:

NC\_VirtualMachine

## Schema Poster and Visio Diagrams

The printed ZENworks Asset Management Database Schema poster has not been updated at this time. (All tables continue to be documented in the *ZENworks Asset Management User's Guide*.)

The updated Visio document is available from Novell Technical Support:

#### **ZENworks AM Schema 7.0.vsd**

In addition, the Software Compliance Module tables are documented in a separate document, available when the Module is purchased.

## Changes for Virtual Machine Identification

One table was added for the new virtual machine identification feature.
