1.1 Welcome

Thank you for choosing our service management solution. Your decision guarantees your service organization's ability to deliver a comprehensive customer support service that meets, and even exceeds, your customer expectations.

Easy to configure and customize, our service management solution has been developed to offer the very best experience to users via the Web. This all-in-one support solution enables service issues to be readily created, managed, monitored and solved, with minimal impact to your customer's organization, allowing them to focus on their core business.

Your customers have access to a user-friendly portal that offers an easy-to-use Knowledge Base and request tracking system. Your technicians are provided with the tools that allow them to offer effective and efficient service. Supervisors have access to comprehensive management and reporting of the service desk, its technicians and all support issues.

For assistance with set-up and configuration of the application, access the Configuration Steps section of this guide. The configuration process requires the User to switch between the Administrator Role and Supervisor Role, so in the first instance it is advisable that the person customizing the application have both User Roles and this can be set for their account within the User tab of the Administrator screen.

The User Guides have sections relevant to the various User Roles within the application, including:

- Administrator
- Supervisor
- Technician
- Partner
- Finance User
- Manager
- Customer.

To start using this User Guide, click on the User Guide link within the Contents tab. Or, to use the step-by-step guide to assist with the application set-up, see Configuration Steps.

Use single clicks within the guide to open topic information.

1.2 Online Help

To assist Users when using the system, online help is available throughout the application.

To access information relevant to an opened screen, click the Help button located in the top right corner of the screen, next to the Logout button.

Sun, 20 Dec 2015 21:27:14 🏼 ? Help 🕂 Logout

A Help Page is displayed containing information related to the application page that is open. Navigate through the help information as necessary, or click Show to view the entire User Guide.

1.3 Configuration Steps

These configuration steps are recommended as a guide to assist with customizing the application to suit the service environment. These steps are what is required at a minimum to enable your system. It should be noted that these steps require access to the Administrator and Supervisor views.

The following procedure covers editing the logged in User account details and ensuring this User has all the relevant privileges to achieve what is required to configure the system. It then details the steps to enable the system to work with email, setting the privileges for how Customers and Technicians can interact with the system, and how requests and the system will behave. This is defined within the Setup>Privileges tabs.

The User then has the option to customize the look and feel of the system, although this can be done later, if preferred. The next step is to create Customers and Users in the system.

Moving to the Supervisor Role, the User then configures the day-to-day elements within the application, which are part of creating and managing requests. This includes setting the time frames for managing requests and defining trigger points for escalations by configuring SLAs; detailing the

steps a request will move through, by customizing Workflows, which includes setting the stages of the Workflow where timers will trigger automatic warnings and escalations; defining the Team(s) of Technicians who will be associated with the customized Workflows and SLAs.

With the basic elements in the system now in place, the User then moves to the Configuration tab to customize the Configuration Management Database (CMDB). This part is often considered the most complex part of configuring the system, as this is where the service environment, including physical and service Items, is mapped into the system with associated relationships. When designing the CMDB, first the templates for all the different Item Categories are created. These are refined as Item Type templates, with these two templates used to define the information recorded against each Item and classification of issues that can be associated with each Item when requests are logged by Customers.

After the CMDB structure is defined, Items are imported via AMIE or.csv file. This is when the Items are associated with Customers or Organizational Units, who can log requests against the assigned Items.

In the Administrator (Setup) view:

1. Customize the default Supervisor access

Include Incident, Service Level Management and if applicable, Request Fulfillment, Problem and Change Management. Adjust the User Timezone, if applicable.

2. Configure Email Setup and Email Messages(See:Setup>Email)

This step allows the system to manage requests via email. After completing the information in the Server and Setup tabs, the content for automated emails sent by this system can be customized. This does not have to be all done at this point, however, it is suggested that within the last page of the Templates tab, the Signature be updated to reflect the service organization name.

3. Enable System Privileges(Setup>Privileges)

At this stage, it is suggested that each option be reviewed in the User, Customer, Request and System tabs within the Privileges sub-menu option. Although it should be noted, these can be adjusted in the future. If you are unsure about what an option refers to, select the Help button on the system UI, to display the relevant page of the User Guide. Be sure to set the appropriate Time Zone within the Customers Privilege tab, as this needs to be set before importing Customers and Users via an authentication server to ensure it is set correctly on all newly created accounts.

4. Customize Banners and Welcome Page Message(Setup>Customize)

This can be done now if the images are available. Alternatively, return to this step at a later stage.

5. Create Customers and Users, which include Supervisor, Technician and Partner accounts

Note, to associate Organizational Unit information with Customers or Users, this can be configured at this point within the Supervisor>User>Organizational Unit tab. Should the import include the name of the Org Unit that matches what is recorded in the system, the details from the information recorded internally will be applied to the Customer or User.

If using an authentication server, move to the Setup>Authentication tab.(See:Setup>Authentication;Active Directory Integration or LDAP Integration)

If creating accounts directly in the system (i.e., using internal authentication), go to the User tab. (See:Customers and Users.)

6. Set up Service Level Agreements (See:Service Level Management)

Move to the *Supervisor view* by clicking the User link, next to the logged in User Name. If these are unknown at this time, the system includes a default SLA that can be used.

If applicable, create Operational Level Agreements and/or Underpinning Contracts (See: OLAs or UCs)

This is more than likely an advanced system configuration step at this point, or may not be relevant to the service organization. However, if OLAs or UCs are in place in the service organization, they can be mapped into the system now. Alternatively, they may be added later.

8. Customize or create Workflows (See: Incident & Problem Workflows and Service Request & Change Workflows)

The system includes default Workflows across all Processes. At this point, the default Workflows may be sufficient, or they can be customized to suit the service organization requirements. Alternatively, new Workflows can be created from scratch.

9. Create Teams(See:Teams)

By default the system includes one Process Team and the Unknown Team. Edit the existing Process Team, including defining the way it works, assigning the relevant Technicians, associating the Workflows that the Team will support, and setting the Technicians to work in the appropriate Escalation Layer(s). Teams are to be created for all Processes that are to be managed by the system (i.e., Incident, Problem, Change, Service Request.), although it may be relevant to finish one Process first, and return to do the other Processes at a later date.

10. Assign Default Teams and SLAs within Request Privileges (See:Setup>Privileges>Requests)

Move to Adminstrator view by clicking the Setup link, next to the logged in User Name

These settings will be applied to all newly created Items and Item Types that result from an AMIE import.

11. Configure the CMDB, by first customizing Configuration Categories:

Return to the Supervisor view by clicking the User link, next to the logged in User Name.

The system includes a number of default Categories, which should be more than enough for most organizations. Within the Category, the attributes of an Item that are to be recorded in the system, are defined by customizing the field labels. The stages that an Item can move through in its lifecycle are defined within the Life Cycle tab (i.e., Installed>Pending Configuration>Pending Test,etc). The types of issues reported against an Item are then created in the Classifications tab.

Configure the Category Details Fields (See:Configuration Categories)

Define the Category's Life Cycle (See:Category Life Cycle)

Create Category Classifications (See:Category Classifications)

12. Create Service Type templates and Service Items

For service organizations wanting to fast-track the capability to manage requests in the system, it is advised to create Service Items in the Service Catalog to allow Customers and Technicians to log and manage requests within the application. Create a Type using the Service Category for each Service being offered, then create the Service Item with the newly created Type template. For the Service to be available in the Catalog, be sure the Service Item status is set to an Active, non Pre-production State. If the Customers are to access a Service on the Customer Portal, the Service Item Lifecycle State should also be set to Customer Visible.

13. Create Item Types (See: Item Types)

If the Types are not to be automatically created as part of an AMIE or .csv import, this is done in the Configuration>Types tab. This is where the Category template is associated with the Type template, the default Teams and SLA are set, and the Classifications for issues reported against Items are refined.

If Items are to be imported via a .csv file or AMIE proceed to Step 14.

14. Within the Admin>Setup tab, complete the Item Import (See:AMIE Import or CSV Import).

After the Items are successfully imported, a Supervisor User will need to refine the Type templates created as part of the import, if the default settings do not apply to a newly created Item Type. This task does not need to be completed immediately, and can be done on an ad hoc basis (i.e., whenever a Type template is opened in Edit mode, before saving, the system will prompt the User to set any required information.)

15. Within the Supervisor>Configuration tab, create Items.(See:Items)

If Items are to be created directly within the system, this is completed in the Configuration>Items tab. An Item Type template is selected for the new Item, which applies all the default information set within the Categories and Types tabs, then ownership of the Item is assigned to the new Item. Ownership can be Everyone (i.e., a Global Item), one or more specific Customers or Organizational Units. The specific attributes of the Item are recorded in the Details tab, and any relationships with other Items in the system can be created within the Relationships tab, now or at some point in the future.

Items can be mapped to Services, if required.(See:Service Catalog.)

1.3.1 Implementing the Processes

For information and steps for implementing for the following Processes, refer to:

- Request Fulfillment
- Incident Management
- Problem Management
- Change Management
- Release & Deployment Management.

1.4 Users

Users within the service management system that are assigned to support Teams must be allocated one of the following Roles:

- Technician
- Supervisor
- Partner.

The above User Roles can work on requests, relevant to the Processes they have been allocated (i.e., Incident, Problem, Change or Service Requests). The About Roles section of the User Guide provides more information regarding specific User Roles in the system.

1.4.1 User Availability

The User List View includes the User Availability status by default, this is based on work hours configured in the Schedule tab of the User and their Vacation Status.

The following icons may be displayed in the List View:

Available
The User is not on leave and is available for request assignment based on their assigned work hours.

| Available | |
|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | The User is not on leave but is not available for request assignment based on their assigned work hours. |
| | Or, if no hours are set within the Schedule tab when the "Define Works Hours" is enabled within Admin>Setup>Privileges>User screen and the User is not on vacation, the system will consider Users to be unavailable. |
| | The User is On Vacation. If the User logs into the system when assigned this status, they will not have to the User Portal. However, if they are also have Customer Web Access, when they log in to the system they default to the Customer Portal. |

1.4.2 Creating a User Account

When creating a new User, the following tabs are available:

- Information
- Aliases
- Team
- Skills
- Types.

1.4.3 Information Tab

Within the User Information tab, User details can be created, viewed and edited. User Roles, Process assignment and default Login credentials can all be customized within this tab.

NOTE: If Custom Fields are to be created for User Information, it is recommended that the Administrator complete the customization prior to creating Users.

To create a new User:

- 1. Select User>Users
- 2. Click New

The User Information screen appears.

3.

| User Information Fields | |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Title | Select a title from the drop-down menu options. (This field is displayed if the Enable Titles option is set to Yes in the Admin>Setup>Setup>Privileges>Customer tab.) |
| First Name* | Enter the User's First Name. |
| Last Name* | Enter the User's Last Name. |
| User Name* | Enter a User Name (unique). |

| Password* | Enter a User Password. Note: Passwords can be changed under the Users Tab or reset by the User under their My Account tab. |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Roles* | Assign a Role for the User. Each Role has associated permissions. See Roles. |
| | Every Technician Role assigned also needs a Supervisor assigned. |
| | NOTE: Note: More than one Role can be assigned but only one of Supervisor, Partner or Technician can be allocated per User. |
| Default Portal* | The Default Portal is the User Interface accessed by default when a User with multiple Roles logs into the system. |
| | NOTE: If the Users Default Portal is set to Customer, the User details will not be accessible in the Users list, but included in the list within the User>Customer tab. |
| Assignment Template | This option is visible in a new User Information screen if Job Assignment Templates are configured in the User> Assignments tab. |
| | Select a template to assign the new User to multiple Teams, Escalation layers and Processes. |
| Operations Processes | Assign the licensed access for Request Fulfilment, Incident and Problem Management. |
| | Assigning Processes to the User gives them access to support those Processes and enables them to be assigned as Team members for those Processes' Teams. |
| | See User Processes. |
| Change Processes | Assign the licensed access for Change, Release and Deployment Management. Note, Users assigned Release are automatically assigned Deployment. |
| Internal Processes | Enable the Users privilege to maintain Service Level, Configuration and Knowledge Management. |
| | Selecting the Configuration and Knowledge options displays the relevant fields that enable granular controls to be set for those processes. |
| | NOTE: The Finance Role is limited to the processes of Configuration and Service Level Management. |
| Knowledge | If the User is assigned the Knowledge Managemen process, their privilege to create, edit, delete and/or publish KBAs can be configured. |

| User Information Fields | |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Configuration | If the User is assigned the Configuration Management process, their privilege to create, edit and/or delete Items within the CMDB can be configured on a per task basis. |
| Customer Org Unit | If the User is also allocated a Customer Role within the system, this field is displayed. Enter Company or Department details that apply to the User in their Customer Role. |
| Line Manager | (This field is visible if the User is also assign a Customer Role within the system. The information can not be edited if the line manager details are set by the LDAP synch.) |
| | If relevant, assign a system user with the Customer Role who can approve/reject requests made by this Customer. |
| Primary Email* | Enter the User's email address. System messages are sent to this address. |
| Send To | This field becomes available for Users that have the Customer Role and have alternate email addresses entered on the Aliases tab. |
| | Select the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list. |
| Phone | Enter telephone details. |
| Mobile | A mobile number can be entered as a contact number or for use with SMS (Short Mail Service message). An SMS can be sent to notify the assigned Technician when a Service Request is raised. |
| | SMS Messaging options: |
| | From the drop down list, select the SMS service provider. |
| | Override SMS Address. If your service provider does not appear in the list, click this checkbox and enter an alternate Service Provider. |
| SMS Override | Enter SMS Gateway override details for the User, if a number other than the one entered in the Mobile field is to be used to send/receive updates via SMS. Enter the complete SMS details in email address format, i.e., 000777891@smsgateway.provider.com. |
| Fax | Enter known fax details. |
| Pager | Enter pager details. |

| Salary | An annual salary can be entered. This value is used for reporting. |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Forum Moderator | Select this checkbox to designate this User as a forum moderator. See Forums. |
| Survey Manager | Select this checkbox to enable this User to create and manage surveys in the system. |
| Supervisor* | Select a Supervisor, if the User has a technician role. Users with the Technician Role must be allocated a Supervisor. |
| Partner For | When a User is assigned the Partner Role, their associated Partner Organization must be assigned within this field. |
| Partner | If the User is also assigned a Customer Role, this field allows the Customer to be associated with a Partner Organization who will handle their requests when they are logged in the system. |
| Available | Shows if the User is available for requests to be assigned to them. This is based on work hours configured in the Schedule tab of the User and their Vacation Status. If no hours are set within the Schedule tab when the "Define Works Hours" is enabled within Admin>Setup>Privileges>User screen and the User is not on vacation, the system will consider them to be unavailable. |
| Assignment | **Visible when the Assignment Control is enabled in Admin>Setup>Privileges>User. |
| | Set to Off if the User is not to be assigned new requests, irrespective of their Availability status. |
| On Vacation | Placing a Technician on vacation excludes them from being assigned new requests automatically. When On Vacation is activated a Technician's existing requests are not reassigned. |
| Training | This option is only visible for Technician Users, and when enabled allows the User to be included in Teams to view requests but does not allow them to put the request in edit mode or add Notes. |
| Email Locale | Adjust the default language for email correspondence, if required. |
| Country | The User automatically adopts the default Country set for the system. However, the Country can be manually adjusted here for the specific User. |
| State | Set the State information based on the Country selected, if required. |
| Timezone | The User automatically adopts the default Timezone set for the system. However, the Timezone can be manually adjusted for the specific User. |

User Information Fields

GPS

The GPS coordinates of the last known address.

- * Denotes Mandatory Fields
- 1. Complete the User detail information
- 2. Click Done.

Emailing User Details

🕎 Email

To email a User regarding their system log in credentials, click the Email button within the User Information screen. If Random Passwords is enabled, selecting Email will reset the Password and forward the details to the User. If Password Questions is enabled in Setup>Privileges>System, selecting Email will send a link to the User directing them to a page that includes the security questions set for their account and reset the password based on the answers provided. Customers must complete this process within an hour of the email being sent.

vCard Button

🖳 vCard

Select this option to download and open the User's information in an electronic business card format, to email or save outside the system.

1.4.4 Schedule Tab

By default the Schedule tab includes the On Vacation option, which can be set to Yes when the User takes leave. The system will automatically re-assign the User's active requests, if the Vacation Reassign option has been enabled in the Admin>Setup>Privileges>User tab. If this option has not been enabled, a Supervisor User will need to manually re-assign the requests, if required.

If the system Setup has been configured to Define Work Hours and Schedule Vacations, this additional functionality is available within the Schedule tab.

| User Informatio | on | | | | |

| | | | | Cancel | Save |

Define Work Hours

Use the drop-down lists to set the hours of work the User is available for the week. Based on what is set here, the system will assign requests to the User during their available hours. However, if no other Technician is available for requests based on their defined work hours, the system will assign the User new requests outside of their set work hours.

NOTE: If the Technician Define Work Hours option has been enabled, the hours of work MUST be defined, otherwise the system will ignore the Technician Assignment logic and automatically allocate new requests to the Team Lead.

Schedule Holidays

The Schedule Holidays functionality allows the Supervisor to pre-book leave in the system for Users. There are no restrictions on the number of days that can be set, and based on the configuration, when a leave period is activated, the system will automatically re-assign active requests to other available Users applying the Technician Assignment logic. If the request was initially drawn from an Incident Queue, it will not return to the Queue but be reassigned to the most relevant Technician based on the Technician Assignment logic.

As a Supervisor User, to schedule User leave:

- 1. Go to the Users>User option
- 2. Select the hyperlink name of the User

- 3. Move to the Schedule tab
- 4. Click Edit, to activate edit mode
- 5. In the Schedule field, select 🚱

The Vacation Details window is expanded.

6. Enter the reason for leave in the Purpose box

| Vacation Details | | |
|------------------|----------------|--|
| Purpose | Anual Leave | |
| Start Date | 12/24/15 22:30 | |
| End Date | 01/04/16 22:29 | |

- 7. Complete the Start and End date details
- 8. Click Save.

The details are recorded in the database and when the Start Date is reached, new requests will not be assigned to the User. After the scheduled End Date, the User account will be automatically re-activated.

| Holidays | | | | |
|-------------|-------------|--------------------|----------------|----------|
| On Vacation | 💿 No 🔍 Yes | | | |
| Schedule | 0 0 | | | |

| | | | | | | | |

The Supervisor Events calendar in the Home tab shows when Users are on Vacation:

1.4.5 Aliases Tab

NOTE: This is only applicable if the User has the Customer Role.

Use the Aliases tab to enter additional email addresses. The system creates requests from emails sent to the system account from a valid email address. Email addresses in the Aliases tab allow the User to send emails to the system account from more than one address. Notifications for requests created using an address in the Aliases tab, are sent to the main email address and cc'd to the alias address that was used to create the request.

When one or more alias email addresses have been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list.

| User Information | |
|------------------------------------------|-------------|
| Information Schedule Aliases Team Skills | Org Unit |
| Add Remove | Ingo Engels |
| 🖾 Email | |
| ingo@epm.blr.novell.com | |
| 1 - 1 of 1 Results | |
| | Done |

To add an alias email address:

- 1. Select User>Users.
- 2. Click on the User name

The User Information screen appears.

- 3. Select the Aliases tab
- 4. Click Edit to access the Add button
- 5. Click Add
- 6. Enter an alias email address
- 7. Click Save.

When an alias email address has been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the alias email address to be set as the default address applied to Customer correspondence.

NOTE: An alias will only be used if the User has a Customer Role.

To remove an Alias Email Address, in Edit mode, tick the checkbox next to the Email Address and click the Remove button.

1.4.6 Team Tab

The User Team tab lists Teams associated with the selected User. Use this section to assign the User to one or more support Teams, making the additions by Team or job Assignment templates that have been configured in the system. Processes selected in the Information tab for the User determine the Teams available in the Team tab.

Once a User is assigned to the Team, the Supervisor must configure the escalation layers for the Team to include the new User. However, the User can easily be added to Layer One of escalation when associated with a new Team by ticking the Assign new users to layer one option when assigning the Team within this tab. Also, if Assignment templates are created in the system, by selecting Team Template, the User will automatically be added to Teams, Escalation Layers and Work Groups configured within the selected Template.

NOTE: The User must be assigned the relevant Processes for Support Teams to be shown in Team search results. If an Assignment template is selected and includes Teams for Processes the current User is not allocated, those Teams will not be included on the Template.

To add a User to a Team within the Team tab:

1. Click Edit

| User Information | | | | | |
|------------------|------------------------------------------------------------------------|-------|----------------|------------------|-------------|
| Information | Schedule Ali | iases | Team | Skills | Org Unit |
| | | | | | Ingo Engels |
| Add By | Team | • | | | |
| Teams | BYOD-Incident-Team Change Management Team | | Find Team (Nam | e) | ٩ |
| | | | Assign new u | ser to layer one | |
| | | | Ca | ancel | Save |

2. Using Add By Team, enter a Team Name in the Find Team field and click (a) or leave the field empty and click (a)

The Teams for Processes that the User is assigned are displayed in the search results.

- 3. Tick "Assign new user to layer one", if relevant
- 4. Select a Support Team link

The User is assigned to the Team and layer one of escalation if appropriate.

5. Click Save.

To add a User to a Team within the Team tab using Assignment templates:

- 1. Click Edit
- 2. Within the Add By field, select Team Template

Job Assignment Templates that have been configured in the User>Assignments tab are displayed, but only including Teams consistent with the Processes assigned to the User

| User Information | | | | | |
|------------------|---------------|---------|------|--------|-------------|
| Information | Schedule | Aliases | Team | Skills | Org Unit |
| | | | | | Ingo Engels |
| Add By | Team Template | • | | | |
| Templates | | • | | | |
| | | | | Cancel | Save |

- 3. Select one or more Template options
- 4. Click Save

The User is automatically included in the Teams, Escalation Layers and Work Groups configured in the Template.

| User Information | | | | | | |
|------------------|---------------|---------|--------------------|-----------|--------|-------------|
| Information | Schedule | Aliases | Team | | Skills | Org Unit |
| | | | | | | Ingo Engels |

| | Team Name | | à | Layer | | ≡ |
| | Portfolio | | | Managemer | nt | |
| | | | 1 - 1 of 1 Results |) | | |
| | | | (| Cance | | Save |

To remove a User from a Team:

1. Select User>Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. Select the Team tab
- 4. Click Edit
- 5. Select to remove a Team assignment
- 6. Click Save
- 7. Click Done.
- 8. NOTE: If a User is the Team Lead or the only person assigned to an escalation layer they cannot be removed from a Team under this tab.

1.4.7 Skills Tab

Use this section to assign any specific Classifications that are to be handled by a Supervisor, Technician or Partner. This assignment assumes areas of expertise for Users assigned to these Classifications. This allows the system to automatically route requests logged against these Classifications to the most appropriate User. **NOTE:** Prior to using the Skills tab, Items and Classifications should be configured.

Assigning a Classification

To assign a Classification:

- 1. Select User>Users>Skills
- 2. Click Edit to display the Add button
- 3. Click Add
- 4. Select the Item Category

The Item Type and Classification Type drop-down list is displayed.

| User Information | | | |
|----------------------|--------------------|-----------|-------------|
| Information Schedule | Aliases Team | Skills | Org Unit |
| | | | Ingo Engels |
| Item Category | • | | |
| Cancel S | ave | | |
| Classification | 🛓 Item Category | Item Type | ≡ |
| | 0 - 0 of 0 Results | | |

- 5. Choose an Item Type, if relevant
- 6. Select * to assign all Classifications as Skills or choose a specific Classification

The list displayed will include all Classifications configured for the Item Category and the Item Type, if an Item Type is selected.

| User Information | | | | | | | | |
|------------------|---------------------------------------|--------------------|-----------|-------------|--|--|--|--|
| Inform | ation Schedule | Aliases Team | Skills | Org Unit | | | | |
| | | | | Ingo Engels | | | | |
| Item Category | Hardware | | | | | | | |
| Item Type | Dell Latitude E6430 | | | | | | | |
| Classification | * | | | | | | | |
| | * | | | | | | | |
| Classific | Configuration Downloads General | 🛓 Item Category | Item Type | ≣ | | | | |
| | Manuals Network | 0 - 0 of 0 Results | | | | | | |

- 7. Click Save
- 8. Click Done.

NOTE: The Classification assigned to the User is either based on the Classifications of an Item Category or Item Type, hence displaying two columns. However, the Item Type column will only include information when the Classification selected is specific to that Item Type, and not directly related to the Item Category.

To remove a Classification:

1. Select User>Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. In the Skills tab, click Edit

The Delete button appears at the bottom right.

- 4. Click the checkbox next to the Classification. Multiple Classifications can be checked
- 5. Click Remove
- 6. Click Done.

NOTE: The Classification assigned to the User is either based on the Classifications of an Item Category or Item Type, hence displaying two columns. However, the Item Type column will only include information when the Classification selected is specific to that Item Type, and not directly related to the Item Category.

1.4.8 Org Units

Use this section to assign one or more Org Units to a Supervisor, Technician or Partner, which will result in requests that are logged by these Org Units being routed to the assigned Users. When Users are assigned to support Organizational Units, the Find Customer option during the request creation process, displays the Supported Org. Units Only option. This limits the Customer search results to those Customers who belong to the Org. Units the logged in Technician is assigned to support.

| Email | |
|-----------|-------|
| | |
| Phone | |
| | |
| Org. Unit | |
| | |
| | 0 |
| | Phone |

Assigning an Org Unit

To assign an Org Unit:

- 1. Select User>Users>Org Units
- 2. Click Edit to display the Find Org. Unit search field
- 3. Enter any known Org Unit details or leave the field blank to return the full list of Org Units recorded in the system

| User Information | | | | | |
|------------------|----------|---------|-------------|-------------|-------------|
| Information | Schedule | Aliases | Team | Skills | Org Unit |
| | | | | | Ingo Engels |
| Org. Units | | | Find Org. U | Init (Name) | ٩ |
| | | | | Cancel | Save |

- 4. Click
- 5. Click on the Org Unit name hyperlink to associate it with the User Multiple selections may be made, if required.
- 6. Click Save.

Removing an Org Unit

To remove the association between a User and an Org Unit:

1. Select User>Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. In the Org Unit tab, click Edit
- Select P next to the relevant Org Unit The Org Unit details are removed from the tab.
- 5. Click Save
- 6. Click Done.

1.5 Technician Assignment

The logic behind Technician Assignment within the system is more than the application basing the allocation on the Technician location, load or skill set, as more extensive parameters are considered when routing requests to Technicians. By understanding the variables within the assignment process, Users can configure the system to better reflect the workflow of its service support Team environment.

When a request is logged with the service desk, the Team is selected based on the SLA and Workflow State of the request.

Figure 1: Request assignment logic

After the Team has been assigned to the request, the application:

- 1. Checks if the Team has escalation layers, and validates the capability of Technicians in Layer or Group associated with the request
- 2. To make an assignment within the layer or group, the system checks if Technicians are assigned areas of specialty Skills or Classifications. If so, the system matches the Classification of the request with the Classifications supported by the Technician
- 3. If multiple Technicians are assigned the relevant Classification, or if specific Classifications are not assigned to the Technicians within the Team, then the system verifies if Team members have been assigned to support specific Organizational Units. If so, the application will match the Organizational Unit of the Customer to the Technician

- 4. If the Team "Live Priority" feature has been enabled, the system checks for Team Technicians logged into the application. If multiple matches have been made between the Technician Skills and the request's Classification, and the Org Unit of the Customer and Technician, the system checks for technicians logged into the application. However, if no match is made between the Skills and Organizational Unit, it will still check for the logged in User if the Live Priority Team functionality is active
- 5. If there are multiple valid Technicians based on Skill, Org Unit and/or Logged In User, the application will allocate the request to a Technician with the lightest request load.

NOTE: It should be noted that if the Technician Define Work Hours option has been enabled in the Admin>Setup>Privileges>User, the hours of work MUST be defined within the Super>User>User>User>User>Schedule tab, otherwise the system will ignore the Technician Assignment logic and automatically allocate new requests to the Team Lead.

Please note that these are not only the forces that govern request assignment. Other factors that determine the routing of requests include the Team assigned to Workflow State, the Technician assignment privilege and if request Queues are enabled.

1.5.1 Service Manager and Workflow States

Within Service Manager the pool of Technicians that can be assigned to a request is increased by the OLA or Underpinning Contract assigned to the Workflow State of the request.

Service Manager allows Workflow States to be governed by internal or external contracts, known as OLAs or Underpinning Contracts, respectively. OLAs can be assigned to different support Teams, which means if the Team changes as a result of the Workflow State change, the request may be routed to a whole new pool of Technicians.

If the Workflow is supported by an Underpinning Contract, the request is assigned internally to the responsibility of the Service Level Manager.

1.5.2 Self Assign Option

The Self Assign functionality allows the application to override the business logic of request assignment. This feature enables the automatic allocation of requests to the Technician who creates the request. A Supervisor User can activate Self Assign for requests on a per Team basis, within the Team Information screen.

1.5.3 Request Queues

That about covers the automated routing of requests, but support Teams who prefer to create a queue or holding bay for newly created requests, are also catered for within the system.

Queues are activated on a per Team basis. This means, where one support Team may use the automated routing process, another can create a holding bay. The holding bay allows Technicians to choose their jobs from the Queue, as opposed to having requests automatically assigned by the system.

The Administrator User can activate the Queues feature in the application Setup>Privileges>Requests tab. The Supervisor User then enables the option within the Team Information screen, as required. New requests assigned to a Team with this preference enabled, are assigned to the System User. To access requests held in the Queue, Technicians use the Request Queue Filter within the Home Tab. The request can then be re-assigned to a specific Technician within the Summary Tab of the request. See: Queues.

1.6 Organizational Units

Customers can be assigned to a Company within the system. This can be refined by allocating the Customer to a Department, and if relevant, to a specific Room. This information is stored within the Organizational Unit details.

NOTE: Companies can exist without Departments, but Departments and Rooms can only be created as part of Company information.

Technicians can also be assigned to service specific Organizational Units.

1.6.1 Organizational Unit Filters

The Organizational Unit list can be filtered to display the following views:

| System List Filters | Description |
|---------------------|-----------------------------------------------------------------|
| Organizations | Shows the Companies supported by the service desk. |
| Org. Units | Lists all Departments included within Companies. |
| All | Lists complete Org Units, with Company and Department names. |

To change the List View, select the relevant option from the Filter list.

| Organizational Units | | | | | | | | | |
|-----------------------------------------|-----------------|-----------------|----------------|---------|-------------------------------|---|----------|----|---|
| New Sea | arch Expor | t: Current Page | 4 | Filter: | All [sys] | • | Display: | 10 | • |
| Name | 🛓 Primary Conta | ct City | ≣ State | | All [sys] Org. Units [sys] | | osite | | ≣ |
| Micro Focus | | | | | Organizations [sys] | | | | ~ |
| Micro Focus - Accounts Dept | | | | | Save View as Filter | | | | |
| Micro Focus - Electrical Engg | | | | | Edit Filter List | | | | |
| Micro Focus - Head Office | | | | | | | | | |
| Micro Focus - Information Technology | | | | | | | | | - |
| | | 1 - | 5 of 5 Results | | | | | | |

1.6.2 Organizational Units and External Authentication

Organizational Unit relationships can also be mapped from an authentication server. By default this is not enabled. To activate Customer Organizational Unit mapping, as an Administrator go to the Advanced tab for the selected authentication server within Admin>Setup>Authentication. Select Yes for the Import Customer Organizational Units option.

| Customer Orgs | 🖲 Yes 🔘 No | | |
|---------------|------------|--------|---|
| Company | Standard | Custom | |
| | company | | - |
| Department | Standard | Custom | |
| | department | | - |

NOTE: The details of the Org. Units are not populated upon this synch, only the Org Unit names. For the Org Unit details to be assigned to Customer or User Information, create the Org Unit in the Supervisor>User>Org Units tab and ensure the Org Unit name is identical to what is stored in the authentication server. If the details are not identical, the system will create another Org. Unit.

1.6.3 Details Tab

Use the Details tab to create an Organizational Unit.

Creating an Organizational Unit

To create an Organizational Unit:

- 1. Select User>Organizational Units
- 2. Click New
- 3. Complete the Organizational Unit Name
- 4. Select Organizations or Org. Units within the Filter drop-down list

| Org. Unit Informat | tion | | | | |
|--------------------|-----------------------|-------------|-------------|------------|-----------|
| Details | Customers | Technicians | Items | Requests | Contracts |
| Information | | | | | |
| Name | | | Notes | | |
| Org. Unit Type | Company | • | | | |
| Org. Unit Code | Company Department | | | | |
| Address 1 | | | | | |
| Address 2 | | | | | |
| City | | | Handshaking | | |
| Zip | | | Override | 🔘 Yes 🔘 No | |
| | | | Partner | | |
| Country | | • | Customer of | | • |
| Phone | | | | | |
| URL | | | | | |
| Email | | | | | |
| | | | | Cancel | Save |

- 5. Enter other details, if required
- 6. Select Handshaking override option, if relevant

If the System Default Handshaking Close Action days is to be adjusted for the Org. Unit, select Yes in the Handshaking Override field. Enter the number of Days to lapse before a request will close if the Customer does not respond to the handshake email notification.

7. If appropriate, set the Partner Organization

(The Partner Organization is an external service provider that includes Partner Users who can manage requests logged with the system for Customers associated with the Company or Department being created.)

8. Click Save.

Primary Contact

When multiple Customers are assigned to an Organizational Unit, a Primary Contact person can be allocated for the Org Unit. This is the preferred person the Service Desk will contact for issues relating to the Org Unit.

To assign a Primary Contact:

- 1. Select User>Organizational Units
- 2. Select an Org Unit Name

The Details tab is displayed. If Customers have been assigned to the Org Unit a Primary Contact field will be visible.

3. Within the Details tab, click Edit

The Find Customer box is displayed. (Note that this search is only visible when Customers have been assigned to the Org. Unit)

4. Search for the Customer

To view all available Customers click Search without entering a Customer last name in the search field.

- 5. Click the Customer name to assign them as the Primary Contact
- 6. Click Save.

Default Item

When an Organizational Unit owns multiple Items, within the Default Item field an Item can be used as the one to be automatically applied to all requests created via email for the Organizational Unit.

To assign a Default Item:

- 1. Select User>Organizational Units
- 2. Select an Org Unit Name

The Details tab is displayed with the Default Item visible at the bottom of the first column.

 Within the Details tab, click Edit The Find Item box is displayed.

| Default Item | Find Item (Ite | m Number) | |
|--------------|---------------------------|--------------------|---|
| | | | 0 |
| | Item Number | 🛓 Item Type | ≣ |
| | Microfocus - eLearning | Website Services | |
| | | 1 - 1 of 1 Results | |

4. Search for the Item

To view all available Items click 💽 without entering an Item Number in the search field.

- 5. Click the Item Number link to assign it as the Default Item
- 6. Click Save.

1.6.4 Customers Tab

This tab displays all Customers assigned to the Organizational Unit. Customers cannot be added within this screen, as they are allocated to Org. Units when they are created or through the User>Customer>Customer Information screen. The list can be filtered based on Customers directly assigned to the Org. Unit, or all Customers associated with Company Org. Units including those associated with related Departments.

| Org. Unit Information | | | | |

1.6.5 Technicians Tab

The Technicians tab allows support technicians to be assigned as key support staff for an Org. Unit. This means when requests are created, the system checks if the Item's Organizational Unit has Technicians assigned to service its request. If so, the request is routed to a Technician assigned to the Org. Unit.

Assigning a Technician to an Organizational Unit

To assign a Technician to an Organizational Unit:

- 1. Select User>Organizational Units
- 2. Select Org Unit Name
- 3. Move to the Technicians tab
- 4. Click Edit
- 5. Click New

| Org. Unit Inform | ation | | | | | | | |
|--------------------------|-----------------------------|-------------|--------------------|--------|---------|----------|---------|-------|
| Details | Customers | Technicians | Departments | Items | | Requests | Contrac | ts |
| | | | | | | | Micro | Focus |
| Available Technicians: | | • | Cancel | Save | | | | |
| 🖾 Technician | Craig Wilson Ingo Engels | | | 🔳 Emai | il | | | |
| Joe K | Joe K Kamal K | | | joe@ | nsd.com | | | |
| Sankar R Vaibhav Jain | | | 1 - 1 of 1 Results | | | | | |

- 6. Select a Technician name from the drop-down list
- 7. Click Save
- 8. Select Done.

Deleting a Technician Assignment

To delete a Technician assignment:

- 1. Select User>Organizational Units
- 2. Select the Org Unit Name
- 3. Move to the Technicians tab
- 4. Click Edit
- 5. Tick the checkbox next to the Technician name
- 6. Click Delete
- 7. Click Done.

1.6.6 Departments Tab

The Departments tab allows Company group information to be refined. Departments are created for a Company within the Departments Tab.

Creating a Department

To create a Department:

- 1. Select User>Organizational Units
- 2. Select Org Unit Company Name
- 3. Move to the Departments tab

| Org. Unit Information | | |
|--------------------------------------|---------------------|--------------------|
| Details Customers Technician | s Departments Items | Requests Contracts |
| New | | Micro Focus |
| Department Name | Primary Contact | Phone |

Edit a Department

Department details are edited through the Org. Units Filter of the Organizational Unit list.

To edit a Department:

- 1. Go to User > Org Units
- 2. Select the filter option Org.Units (sys)
- 3. Select a Department from the list provided
- 4. Click Edit
- 5. Modify the details as necessary
- 6. Select Save.

1.6.7 Rooms Tab

To expand Department details, Room locations can be created. This allows Customers to be assigned to specific locations within an Organizational Unit. The Rooms tab is only visible for Department Org Units that are accessed through the *Org.Unit filter of the Org Unit list*.

| Org. Unit Informatio | on | | | | | | | |
|----------------------|-----------|-------------|--------------------|-------|----------|----|---------|---|
| Details | Customers | Technicians | Rooms | Items | Requests | Co | ntracts | |

- 2. Select the relevant Department/Org.Unit link
- 3. Move to the Rooms tab
- 4. Click Edit
- 5. Click New
- 6. Enter the Room Name
- 7. Click Save.

1.6.8 Items Tab

This tab lists all the Items that have been assigned to the Organizational Unit.

| Org. Unit Information | | | |
|-----------------------|-------------------------|----------------|-------------|
| Details Customers | Technicians Departments | Items Requests | Contracts |
| | | | Micro Focus |
| Item No. 🗮 Item Type | | <u>≜</u> Team | |
| | 0 - 0 of 0 Results | | |
| | | | Done |

1.6.9 Requests Tab

This tab lists all requests generated by the Organizational Unit. To view or modify a request, select the Task# hyperlink.

| Org. Unit | Information | | | | |
|-----------|------------------|------------|---------------------|----------------|---------------|
| De | tails Custo | mers Techr | nicians Departments | Items Requests | Contracts |
| | | | | | Micro Focus |
| | | | | Filter: In | cidents [sys] |
| Task # | ₹ Process | Date | Technician | E Customer | ≣ |
| | | | 0 - 0 of 0 Results | | |
| | | | | | Done |

1.6.10 Contracts Tab

The Contracts tab displays an Organizational Unit's current contract status. An Organizational Unit can be assigned an SLA or, when Billing is enabled, a Contract that manages the period of time the SLA applies to the Org Unit. When Contracts are enabled, an Organizational Unit can have only one active Contract in the system at any one time and must have an assigned Primary Contact.

To update the Service Level assignment when Contracts are disabled:

- 1. User>Organization Units
- 2. Select the required Org Unit

The Org Unit Information screen will open.

- 3. Select the Contracts tab, click Edit
- 4. In SLA Details, using the drop-down menu, select the SLA
- 5. Select Save.

When Contracts are in use throughout the application, timeframes are set for Service Levels and Contract history is displayed within the Contracts tab. It is also possible to assign a Service Level and/ or Contract within the Contracts tab.

| | Cus | | | Departments | Items | Requests Cont | tracts MyCo |

| End I Exp | Date 05/07/1: pires 1 Year (| 3) Day | SLA Gold | | | | |
| End I Exp | Date 05/07/1: pires 1 Year (Contract # 10 | 3) Day ╤ Type | | ≣ Invoice # | Start Date | End Date | |

To create a new Contract for an Organizational Unit:

NOTE: To assign a Contract to an Org Unit, a Primary Contact must be nominated for the Org Unit or the system will prompt the User to assign a Primary Contact during the Contract assignment process. This means, prior to creating the Contract assign at least one Customer to the Org Unit and then designate a Customer as the Primary Contact. To assign a primary contact:

- 1. Select User>Organizational Units
- 2. Select an Org Unit Name

The Details tab is displayed. If Customers have been assigned to the Org Unit a Primary Contact field will be visible.

3. Within the Details tab, click Edit

The Find Customer box is displayed. (Note that this search is only visible when customers have been assigned to the org unit)

| Primary Contact | Find Customer (Last name) | |
|-----------------|---------------------------|--------|
| | | Search |

- 4. Search for the Customer. To view all available customers click Search without entering a customer last name in the search field
- 5. Click the Customer name to assign them as the Primary Contact
- 6. Click Save.

To create a new Contract for an Organizational Unit:

- 1. Select User> Organizational Units
- 2. Select the Organizational Unit's Name
- 3. Move to the Contracts tab

| Org. Unit Information | |
|--------------------------------------------------------------|------|
| Details Customers Technicians Rooms Items Requests Contracts | |
| Edit | Engg |
| SLA Details | |
| Service Level | |
| Contract # No Contract Assigned | |
| Items Org Unit Customers Requests | |
| Contract # | |
| 0 - 0 of 0 Results | |
| Done | |

4. Click Edit

The Add and Delete buttons become available with the Contracts>Org Unit tab.

5. Click Add

If a Primary Contact has not been assigned to the Org Unit a system prompt will notify the User to create a Primary Contact. See: Primary Contact.

6. Select a Service Level from the list

When selected, the screen expands to display start and end date fields.

| Details C | ustomers | Technicians | Rooms | Items | Rec | uests | Contra |
|---------------|--------------------------------|---------------|------------------|-----------------|----------------|-------|--------|
| Contract | | | | | | | |
| Service Level | Warranty | | | | | | |

| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None | |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None | |
| Contract Type | Per Org Unit | | | | | | |
| Time | Subscription | - | | | | | |
| | Subscription | | | | | | |
| Start Date | Time Limited | | | | | | |
| End Date | Support Hours Support Hours | |] | | | | |
| | | | | | | ncel | Sav |

7. For the Per Org Unit Contract Type the Time Period for the Contract can be defined as one of the following:

Subscription if selected, the Start and End Dates are automatically set to a year from the date of creation, but can be edited if required.

Time Limited Subscription if selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually by entering the length of time for the subscription period, or the system will default to entering a year from the date of creation.

Support Hours if selected, the number of support hours purchased by the Customers should be entered.

Support Hours by Month if selected, set the number of hours purchased per month and define which day of the month contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

- 8. Click Save
- 9. Click Next to continue

The system reverts to the Contracts summary screen, if the contract is forward dated and another contract is not already active, the Enable Contract option button will be available. Select this button if the contract is to commence prior to the set Start Date. Alternatively, other contracts can be queued for the Org Unit by selecting the Add button.

12. NOTE: If Invoices are enabled, a new invoice is automatically saved within the Finance>Invoices screen for the newly created Contract. If payment is required, a Pending Invoice Number is displayed and once processed, the Contract will be listed in the Org.Unit Information>Contracts>Org.Unit tab.

To delete a current Contract, as a Supervisor User, select Cancel next to the Contract Number. Alternatively, to delete a current or queued Contract, within the Contract>Org Unit tab check the field next to the relevant Contract # and select the Delete button.

The Items and Customers tab within the Org Unit>Contracts screen is used to list all the Items and Customers Contracts that are associated with the selected Org Unit.

1.7 Primary Contact

When multiple Customers are assigned to an Organizational Unit, a Primary Contact person can be assigned to the Org Unit. This is the preferred person that will be contacted regarding issues related to the Org Unit.

NOTE: When Billing is enabled, a Primary Contact must be assigned to the Org Unit if the Org Unit is to be allocated to an Item. If a Primary Contact has not been assigned to an Org Unit, the Org Unit will not be displayed as an option in Org Unit search results of the Item Information screen.

To assign a Primary Contact:

- 1. Select User>Organizational Units
- 2. Select an Org Unit Name

The Details tab is displayed. If Customers have been assigned to the Org Unit a Primary Contact field will be visible.

| Org. Unit Information | | | | | | | |

3. Within the Details tab, click Edit

The Find Customer box is displayed. (Note that this search is only visible when Customers have been assigned to the Org Unit

| Primary Contact | |
|-----------------|---------------------------|
| | Find Customer (Last Name) |
| | 0 |
| | |

4. Search for the Customer

To view all available customers click Search without entering a customer last name in the search field

- 5. Click the Customer name to assign them as the Primary Contact
- 6. Click Save.

1.8 Customers

The Customers tab is used to create, modify and delete Customer Accounts.

A Customer is a User assigned the Customer Role. They can be internal or external to the organization and can raise Incidents through the Customer Portal or via email. Service Desk staff can also generate requests on behalf of the Customer.

Service Desk Customers can be created within this tab. The Administrator can also import Customers from a .CSV file, or synchronize the system with a directory server.

NOTE: If Customers are imported using a directory server, the option to create Customers from the Users tab is disabled.

1.8.1 Creating a Customer Account

Customer Information includes the following tabs:

- Information
- Aliases
- Items
- Requests
- Contracts.

1.8.2 Information Tab

This tab is used to enter contact information about a Customer, creating a new Customer account.

NOTE: If Custom Fields are to be created for Customer Information, it is recommended the Administrator complete the customization prior to creating Users. (See Administrator: Custom Fields.)

To create a Customer account using Internal Authentication:

- 1. Select User>Customers
- 2. Select New
- 3. The Customer Information screen appears with the following fields:
- 4.

| Customer Information Fields | |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Access | |
| Title | If enabled, select the appropriate title from the drop- down options. (This field is displayed if the Enable Titles option is set to Yes in the Admin>Setup>Setup>Privileges>Customer tab.) |
| First Name* | Customer's First Name. |
| Last Name* | Customer's Last Name. |
| User Name* | The login User name credentials for the User. If this is imported via LDAP or Active Directory, it can not be edited. Otherwise, enter a Username. Note that the value must be unique. |
| Password/ Confirm Password | The Default Password is set to the Customer's email address or a random string can be enabled by the Administrator in Setup>Privileges>System. See Authentication. |
| | Customers can reset their password from the Customer Portal, or a Service Desk User can reset it in the customer account details using the Reset Password button through the Customer> Information tab. |
| Web Access | Web Access allows Customers to view their account information and Incidents via the Customer Portal. |
| Contact | |

| Customer Information Fields | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Email* | The Customer's Email address. System messages are sent to this address. |
| Send To | This field becomes when alternate email addresses are entered on the Aliases tab. |
| | Select the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address, the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list. |
| Org. Unit | The Organizational Unit, be it a Company or Department with which the Customer is associated. |
| | (Organizational Units are created by the Supervisor, in Users >Organizational Units.) |
| Line Manager | If relevant, assign a system user with the Customer Role who can approve/reject requests made by this Customer, as part of the Change Management or Service Request approval process. (This information can not be edited if the line manager details are set by the LDAP synch.) |
| Room | This field is visible if the Display Rooms option is set to Yes in the Setup>Privileges>Customer screen and there are Room details configured in Organizational Units. |
| Address 1 | First line of Customer's address. |
| Address 2 | Second line of Customer's address. |
| City | Customer's city details |
| State | Customer's State details. Options will be displayed for the State, once the Country is selected, if Regions are configured for the Country in the system. |
| Zip/Postcode | Customer's area code. |
| Country | Customer's country. The country selected will determine the time zone and state options for the Customer. |
| Email Locale | Set the default language for email correspondence. |
| Phone | Enter Phone details. |
| Fax | Enter the Customer's fax number, if relevant. |
| Pager | Enter the Customer's pager details, if relevant. |

| Customer | Information | Fields |
|----------|-------------|--------|
| | | |

| Mobile | A mobile number can be entered as a contact number or for use with SMS (Short Mail Service message). An SMS can be sent to notify the assigned Technician when a request is created. |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | SMS Messaging options: |
| | From the drop-down list, select the SMS Service Provider. |
| | Override SMS Address. If your service provider does not appear in the list, click this checkbox and enter an alternate Service Provider. |
| SMS Override | Enter SMS Gateway override details for the Customer, if a number other than the one entered in the Mobile field is to be used to send/receive updates via SMS. Enter the complete SMS details in email address format, i.e., 000777891@smsgateway.provider.com. |
| Partner | |
| Customer of | Nominate the Partner Organization associate with the Customer. This is an external service provider who manages the Customer's request. |
| | (The option is enabled by the Administrator in Setup Privileges> Use >Edit Customer Partner. The Partner Organizations are defined by the Supervisor in the User>Partner Organizations tab.) |
| Locale | |
| Time zone | The Customer automatically adopts the default Timezone set for the system. However, the Timezone can be manually adjusted here for the specific Customer. |
| Last Login | Auto-populated with the date the Customer last logged into the system. |
| Host | The IP address of the last login for the Customer |
| GPS | The GPS coordinates of the last known address for the Customer. (This field is displayed when the Record GPS option is enabled in Admin>Setup>Setup>Privileges>Customer tab.) |
| Roles | |
| Current* | Multiple Roles can be assigned to a User. Select other Roles the Customer will use, by ticking the check boxes. |
| | Note: If the Technician Role is selected, a Supervisor must be allocated. |

| Customer Information Fields | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Default Portal | The Default Portal is the user interface a Customer, who is assigned multiple Roles, accesses by default when they log into the system. |
| | NOTE: If the Users Default Portal is set to Customer, the User details will not be accessible in the Users list, but included in the list within the User>Customer tab. |
| Details | |
| Notes | Click on the field to enter any Customer relevant information. |

* Denotes mandatory fields

1. Click Done.

Emailing Customers Credentials

To email a newly created Customer details regarding their system log in details, click the Email button within the Customer Information screen. If Random Passwords is enabled, selecting Email will reset the Password and forward the details to the Customer. If Password Questions is enabled in Setup>Privileges>System, selecting Email will send a link to the Customer directing them to a page that includes the security questions set for their account and reset the password based on the answers provided. Customers must complete this process within an hour of the email being sent.

vCard Button

Select this option to download and open the Customer's information in an electronic business card format, to email or save outside the system.

1.8.3 Aliases Tab

The Aliases tab is used to enter additional email addresses. Email addresses in the Aliases tab allow the Customer to send emails to the System or Team support addresses from more than one address. The system creates requests from these emails. Notifications for requests created using an address in the Aliases tab, are sent to the main email address and cc'd to the alias address that was used to create the request.

When one or more alias email addresses have been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list.

To add an alias email address:

- 1. Select User>Customers
- 2. Click on the Customer name

The Customer Information screen appears.

- 3. In the Aliases tab click Edit
- 4. Click Add
- 5. Enter an alias email address
- 6. Click Save.

When an alias email address has been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the alias email address to be set as the default address applied to Customer correspondence.

| Customer Information | | | | | | | |
|----------------------|---------|--------------------|----------|-----------|----------|--|--|

| | Item No. | Item Type | | Team | ≣ | | | |
| | | | 0 - 0 of 0 Results | | | | | |
| | | | | | Done | | | |

To add an Item:

- 1. Select User>Customers
- 2. Click on the Customer name

The Customer Information screen appears.

- 3. In the Information tab, click Edit
- In the Item tab, click Add The Find Item editor is displayed.
- 5. Search for the relevant Item

For details regarding an advanced Item search see: Advanced Search.

6. Select the Item # hyperlink

The selected Item will be associated with the Customer.

- 7. Click Save
- 8. Select Done.

1.8.5 Requests Tab

The Requests tab is visible after the Customer has been created. It lists all requests related to the Customer and allows the User to create new requests for the Customer. To view details of a request, select the Task # or Problem Report hyperlink. To create a request for the Customer, select the New button.

| Customer Information | | | |
|------------------------|-----------------------|-------------------------|-----------------|
| Contact Aliases | Items | Requests Contra | cts |
| Excel New | | | Jeff Lag |

| | | | Done |

1.8.6 Contracts Tab

The Contracts tab displays a Customer's current contract status. A Customer can be assigned an SLA or, when Billing is enabled, a Contract. A Customer can only have one active Contract, but contracts can be queued within the Contract >Customer tab, as required.

When Contracts are in use throughout the application, the timeframe set for Service Levels and Contract history are displayed within the Contracts tab. It is also possible to assign a Service Level and/or Contract within the Contracts tab.

| | | | | Cano | el | Save |

7. Define the Contract Time period

For the Per Customer Contract Type the Time Period for the Contract can be defined:

If *Subscription* is selected, the Start and End Dates are automatically completed by the system, but can be edited if required.

If *Time Limited Subscription* is selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually, entering the length of time for the subscription period.

If *Support Hours* is selected, the number of support hours purchased by the Customers should be entered

If *Support Hours By Month* is selected, define the number of Support Hours covered per month and on which day of the month the Contract is designated as the Rollover Day. The Start Date and End Date fields are automatically completed as an annual contract subscription but can be edited, as required.

If the Start Date is set as a future date, the Pending Contract status is assigned. See Pending Contracts.

- 8. Click Save
- 9. Click Next to continue

The system reverts to the Contracts summary screen.

| Cust | tomer Informa | ation | | | | | | |

| | | | | 1 - 1 of 1 Results |) | | | |
| | | | | | | Cancel | | Save |

10. Click Save. Click Done.

To delete a current Contract, as a Supervisor User, select **Cancel** next to the Contract Number. Alternatively, to delete a current or queued Contract, within the Contract>Customers tab check the field next to the relevant Contract # and select the Delete button.

The Items tab within the Customer>Contracts screen is used to list all the Items with a Contract that are owned by a Customer.

The list of requests with the time recorded against the Contract is displayed within the Audit tab. The Summary view displays the list of requests with total number of Notes and Time allocated to the Contract, while the Detail view includes a breakdown of all Notes and the associated time related to each request.

Searching for Customers

To search for Customers within the Users>Customers tab:

- 1. Go to Users>Customer
- 2. Select

3. Enter any known Customer details to find a specific Customer or to generate a Customer List based on date of creation, enter a Before or After creation date for the Customer.

| Customer Search | |
|-----------------|-----------------------------------|

4. Click Search.

The results will be displayed in a table with the Customer Name and contact information.

5. Click on the Customer Name to open the Customer Information module or select the Email Address to send an email.

NOTE: To search for a Customer who has been deleted in the system, conduct the search within the Administrator Portal.

1.9 Service Level Management

The goal of Service Level Management is to maintain and improve the alignment between business activities and IT service quality. This is achieved through the cycle of:

- 1. Agree on service level expectations and record them in Service Level Agreements (SLAs)
- 2. Monitor the service provided
- 3. Report actual service delivery results
- 4. Review IT service delivery results in relation to the SLA, and adjust accordingly.

A Service Level Agreement (SLA) is a formal, negotiated contract that outlines service level expectations and clarifies responsibilities between the Service Desk and its Customers. When unacceptable levels of service are noted throughout the service cycle, action can be taken to re-align expectations with actual service delivery results.

Within the system, SLAs are specific and time-based in order to help monitor and report on performance. They can be applied to any of the following elements within the application:

- Customers
- Organizational Units
- Items.

NOTE: Only Users assigned with the Service Level Management Role can create or modify SLAs.

SLAs are incorporated in the support process when a new Workflow is created. An SLA is assigned to a Workflow and specifies the expected resolution time for a request. To successfully meet SLA expectations, the system allows the Service Desk to associate each Workflow State of a request with an Operational Level Agreement (OLA) or Underpinning Contract (UC).

An OLA is an internally negotiated document that identifies the service level expectations between the Service Desk and the Technical Support Teams. An Underpinning Contract enables the Service Desk to monitor and maintain control of requests that are forwarded to external service and support providers.

To ensure an SLA resolution time is met, the sum of the resolution times for each of the OLAs or Underpinning Contracts assigned to a Workflow Lifecycle must be less than or equal to the SLA resolution time.

1.9.1 SLAs in Action

When a request is logged with the Service Desk, the request adopts the SLA that has been assigned to either the Item, Customer or Organizational Unit. If an SLA has not been allocated to any of these elements, the SLA assigned as the system default within the Admin>Setup>Privileges>Requests tab will be automatically applied to the request.

The SLA allocated to the request determines the Workflow options made available for the lifecycle of the request. The Workflows listed are assigned the same SLA as the request. Before saving the request, the User can adjust the system assigned Workflow if more than one option exists.

Refer to SLM Configuration for more detailed information.

1.9.2 Service Tab

Use this section to create and modify SLAs to provide request lifecycle management capabilities. This section can also be used to create and customize OLAs and UCs. After the individual components of the SLAs have been configured, Workflows can be created and assigned the service level management functionality.

The system also provides SLA-compliance reporting, allowing Managers to define and track availability and performance objectives that reflect business goals. SLAs are used across all processes, and are assigned when requests are created.

Within the Service Tab Users can:

- Create SLAs
- Create OLAs
- Create Underpinning Contracts
- Define Workflows
- Define Breach Codes
- Maintain Contracts (when enabled).

1.10 Service Level Management Configuration

1.10.1 Introduction

A Service Level Agreement (SLA) is a business contract that specifies service level expectations around critical infrastructure and business services. Typically, they refer to response, restoration and resolution targets that the Service Desk needs to meet.

1.10.2 OLAs and UCs

Operational level agreements (OLAs) are similar to SLAs, except they communicate internal teambased expectations within specific stages of the Workflow process. Similarly, the obligations of external service providers are specified using Underpinning Contracts (UCs). Unlike an OLA where an appropriate Team Technician is assigned responsibility for servicing a request, it is the responsibility of a Service Level Manager to monitor the performance of the external service provider in relation to the business's expectations as defined in UC Workflow States.

1.10.3 Workflows and Workflow States

Workflows consist of an Entry State, one or more Transitional States and Exit States. They define the sequence of steps that Service Desk staff can follow when managing customer requests. Within the system, any number of Workflows can be customized for the Incident, Problem, Change, Release and Service Request Management Processes. Each step, or Workflow State, defines the activity, and if relevant the OLA, with Default Team, or UC required to successfully process the request at that step. Only after the nominated Team Technician has successfully concluded the activity does the request get routed to the next appropriate Workflow State. The Workflow is deemed complete once the request enters an Exit Workflow State.

1.10.4 Escalation

When a request is created it is assigned an SLA, and based on the assigned SLA, a Workflow and Team. Based on the configuration of the assigned Team, a Technician or System User is allocated the responsibility of the task. Within Teams, escalation layers are configured for manual or automated routing of requests. Manual routing through the escalation layers is triggered by a Technician in the request Information screen. Automatic routing through escalation layers is driven by the request's assigned priority relative to the associated SLA response, restoration and resolution targets. For each target one or more percentage triggers can be created for automated reminders, warnings or escalations. When the request is in a Service Level active stage of the Workflow the system monitors the percentage of time elapsed relative the SLA triggers, and when percentage targets are met the triggers are activated. If the SLA response, restoration or resolution time is breached, the request is automatically escalated.

1.10.5 SLAs and Workflow

The Service Level Management module allows service level expectations to be mapped to end-toend business processes. In so doing, the system performs the following Service Level Management validation:

SLA resolution time >= Sum (Workflow States (OLA or UC resolution times)

When validating Workflows, the system disallows adding States to a Workflow that will force the sum of the Workflow State resolution timers for OLAs and UCs to breach the SLAs resolution timers. In such situations, the system will warn the service level manager to either increase the SLA resolution targets or select a more appropriate UC or OLA that will fall within the SLA targets.

1.10.6 Creating a Custom Workflow

User Portal

- 1 Log into Service Desk as a supervisor.
- 2 Click Service > Workflows > New.
- **3** Edit the newly created workflow to include entry, exit, and intermediate steps and save the information.
- 4 Create a new SLA by navigating to Service > SLA > New. Or, you can modify the existing SLA and add the newly created workflow.

1.10.7 Configuring SLM in the system

Before requests can be processed using SLM, a Supervisor typically needs to perform the following sequence of configuration steps:

- 1. Define Technicians. Set Roles & Process permissions (Users > Users)
- 2. Define service level managers (Users > Users)

To become a service level manager a User must be assigned the Service Level Management Process

- 3. Establish business SLAs
- a. Specify service level manager

- b. Availability %
- c. Warning and breach notifications
- d. Set priority targets
- e. Specify blackout periods
- 1. Setup OLAs
- a. Specify service level manager
- b. Set service targets
- 1. Setup Underpinning Contracts (UCs)
- a. Specify service level manager
- b. Specify Vendor
- c. Set service targets
- 1. Define Workflows
- a. Name the process and associate it with one of the ITIL processes

b. Optionally modify default open and close states { you might need to come back to this once all states have been defined}

- c. Specify SLA for the Workflow from Step 3.
- d. For each Workflow State, specify:
- i. Is the Workflow State active?
- ii. Is the State an entry or exit state?
- iii. The Contract Type: None / OLA / UC
- 1. Specify an OLA if the OLA Contract Type is set.
- 2. Select a default Team, that has been assigned the OLA.
- 3. Specify a UC, if the UC contract type has been selected.

iv. Should the SLA timer continue counting time when the request has entered this State?

v. Should the State be used to measure SLA restoration or resolution time (for reporting purposes only)

- vi. Specify relevant next / previous States to define the end-to-end Workflow.
- 1. To prevent the SLA target from being breached, the contract time will be calculated when an OLA or UC is assigned to a State.
- e. Update 6b, if required.
- 1. Define the Teams
- a. Specify Technicians
- b. Specify OLAs
- c. Specify Workflows

- d. Define escalation layers or work groups
- 1. Make any modifications to the Workflow State
- a. Specify a default Team to provide support for specific States {review 6diii 1a)

1.10.8 Applying SLM to request creation and management

After SLAs, Workflows and Teams have been defined, the Service Desk is able to use the system to efficiently process Incident, Problem, RFC and Service Requests according to organizational standards and procedures.

The following steps outline the process of generating and managing an Incident in the system:

- 1. Within the Operations > Incident tab select the New button:
- a. Assign a Customer
- b. Select an Item, which include Services within Service Catalog
- c. Profile the request
- i. Select a Classification
- ii. Enter Description of the request
- iii. Complete any custom fields

d. If the proactive analysis option is enabled, proposed solutions will be available within the Analysis Tab. If a relevant Solution is proposed, apply the Solution to close the request. Otherwise, click 'Next' to move to the Summary tab of the request screen.

- 1. In the Summary Information screen, confirm:
- a. SLA
- b. Workflow
- i. A list of Workflows options is derived based on the SLA selected

ii. If a Workflow has not been assigned to the SLA, then the system default Workflow is assigned to the Incident

c. Team

i. A list of Team options will be derived based on the Workflow selected

ii. If a Team has not been assigned to the Workflow, then the CI's default Team is assigned to manage the Incident

- d. Technician
- e. Request Urgency / Impact / Priority

f. Notifications

- g. Workflow State (= Status)
- h. Add Note(s), and apply private/public visibility and Customer email distribution options
- i. Upload attachments
- j. Access Audit trail details

k. Access Impact information (i.e., Service Targets, SLA breaches, Item Relationships, Planned Outages, Contract Monitor)

- 1. Perform analysis within the Analysis tab
- a. Allows the system to recommend a proposed Workaround or Solution
- b. Search Workarounds / Solutions
- c. Raise new Workaround / Solution
- d. Raise a new Problem and link it to the request
- e. Raise a new RFC and link it to the request

f. If the request is related to other Incidents, Problems, Change or Service Requests, view all related requests within the Related sidebar in the Summary screen.

- 1. Save the request
- 2. Group similar or related requests using the Link option and manage the collective from the Group tab or selecting the Group # link in the List View, if this option has been defined for the customized view.

1.11 Breach Codes

An SLA breach occurs when a User fails to meet service level targets. When a breach occurs, the User assigned to the request receives an Alert, prompting them to explain the cause of the breach. The User is given the option to select a breach code and provide an explanation for the breach within the Service Level Breach filter view of the Impact tab of the breached request.

Breach codes are defined by a Supervisor User within the Service > Breach Codes tab.

To create a breach code:

- 1. Go to Service> Breach Codes
- 2. Select New

| Breach Coo | des |
|-------------|-------------|
| Breach Code | |
| Description | |
| | Cancel Save |

- 3. Enter a Breach Code label
- 4. Enter a Description of the breach
- 5. Click Save.

The System column in the List View includes Yes to indicate a Code that can be edited.

| Breach Codes | | | |
|-------------------|----------|--------------------|--|
| New | | | |
| Name | 🛓 System | Description | |
| Technical Problem | Yes | | |
| | | 1 - 1 of 1 Results | |

1.12 Contracts

 ¹ Home
 ¹ Home

(Contracts menu option is available when Enable Contracts is set to Yes in Admin>Setup>Billing>Setup.)

Contracts within the system allow service and support organizations to manage their Customer support subscriptions relative to the type of service they provide.

For Customer requests to be addressed, all requests must be associated with a valid contract. A Contract consists of a Service Level Agreement (SLA) and a Service Delivery Period (start and end date). A Service Delivery Period is the duration of the contract, such as a month or a year. In the case of individual request Contracts, the Service Delivery Period terminates when the request is closed.

Contracts can be used as a stand-alone function or with the Invoices facility. Service Desks that charge Customers for the service and support they provide, can enable the Contracts and Invoices functionality. Invoice creation within the system is on a per Contract basis.

1.12.1 Contract Types

The Contract Types available within the system include:

- Per Request covers the period of time for which the request is open and worked undertaken
- Per Item, Customer or Org. Unit covers the Item, Customer or Org.Unit regardless of the number of requests logged against the Item or by the Customer or Org. Unit but can be created on the following basis:
 - Subscription a contract that covers a specified period of time
 - Time Limited Subscription a contract that covers either a specified period of time or number of support hours, whichever limit is reached first
 - · Support Hours a contract that defines the number of support hours covered
 - Support Hours by Month a contract that covers a total number of support hours purchased for a defined timeframe and allocated on a per month basis.

1.12.2 Contracts Option

Users must also be assigned the Service Level Management Process within their User account, in order to view the Service Level tab. The Contracts option within the Service tab is visible when Billing>Contracts is enabled by the Administrator. A list of all Contracts generated in the system is listed here and can be viewed through a selection of Filter options.

| Contracts | | | | | | |
|------------|--------------|----------|----------|-------------------|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Search | PDF | X Excel | | | Filter: | Active Item Contracts [sys] Display: 10 |
| Contract # | ₹ SLA | ■ Object | Туре | Contract End Date | ≣ Hour | Active Customer Contracts [sys] Org.Unit Active Item Contracts [sys] |
| | | | to 0 - 0 | 0 Results | | Active Org Unit Contracts [sys] All Agreements [sys] All Customer Contracts [sys] All Dratem Contracts [sys] All Org Unit Contracts [sys] All Pending Contracts [sys] Request Contracts [sys] |

The following filter list views are provided:

| Contracts Filter Views | Description |
|----------------------------------------------------------------|--------------------------------------------------------------------------------|
| Active Customer Contracts | Displays a list of all valid contracts for Customers. |
| Active Item Contracts | Lists all valid Item Contracts. |
| Active Organization Unit Contracts | Displays all valid Organizational Unit Contracts. |
| All Agreements Lists all Contracts in the system regardless of | |
| All Customer Contracts | Lists all Customer Contracts in the system regardless of status. |
| All Item Contracts | Displays all Item Contracts in the system regardless of status. |
| All Organizational Units | Lists all Organizational Unit Contracts in the system regardless of status. |
| All Pending Contracts | Displays all Contracts with a Pending Status that are waiting to be processed. |
| Request Contracts | Lists all Contracts created on a Per Request basis. |

1.12.3 Contract Creation

The Contracts option within the Service tab only provides the list view of Contracts generated in the system. Contracts are created in any of the following screens:

- Item >Costs >Contracts tab (See: Costs Tab and Create a Contract.)
- Customer>Contacts tab (See:Create a Contract.)
- Organizational Unit >Contracts tab (See:Create a Contract.)
- Finance>Invoices tab (See: Contracts and Invoices)
- Request >Contract tab for requests with a Pending No Contract status. (See: Create a Contract.)

1.12.4 Contract Fields

| tract Informati | on | | | |
|-----------------|-----------------------|--------------------|------------|--------------|
| Edit | | | | Contract # 3 |
| Details | | | | |
| Contract Type | Per Item | | | |
| Item | 100002 (Service Desk) | | | |
| Start Date | 08/26/11 00:00 | | | |
| End Date | 08/25/12 23:59 | | | |
| Expires | 1 Year 0 Day | | | |
| SLA | Bronze | | | |
| Invoice # | 100002 | | | |
| | Cancel Contract | | | |
| Ownership | | | | |
| Customer | Simone Supervisor | | | |
| | | (| Attachment | Audit |
| | | | | |
| File Descr | iption | ≣ Size | Date | ₹ |
| | | 0 - 0 of 0 Results | | |
| | | | | Done |

A Contract in the system includes the following fields in the Contract Information screen:

| Contract Details | Description | | |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Contract Type | Subscription or a contract that just covers the current request. | | |
| Item, Customer or Org. Unit | For Subscription contracts, this is the Item, Customer or Org. Unit covered by the Contract. For Per Incident contracts this is replaced by a request ID number. | | |

| Contract Details | Description |
|--------------------|--------------------------------------------------------------------------------------------------------------|
| Start and End Date | Subscription Contracts default to a one year contract but can be amended. |
| Expires | The number of days until the Contract expires. |
| Hours Purchased | The number of hours purchased for a Time Limited Subscription or Support Hours Contract. |
| Time Remaining | The amount of time remaining for the Time Limited Subscription or Support Hours Contract. |
| SLA | The SLA applied to the Contract. |
| Invoice # | The Invoice number used to create the Contract. (This is displayed when Invoices are enabled in the system.) |
| Ownership | |
| Customer | The Customer covered by the Contract. |

1.12.5 Attachment Tab

The Attachment tab allows the User to upload documentation related to the Contract. This facility provides a centralized repository for storing information and obligation details related to the Contract.

1.12.6 Audit Tab

The list of requests with the time recorded against the Contract is displayed within the Audit tab. The Summary view displays the list of requests with total number of Notes and Time allocated to the Contract, while the Detail view includes a breakdown of all Notes and the associated time related to each request.

1.12.7 Contract Validation Process

When a request is created and Contracts are enabled, the system validates the contract status for the Customer, Organizational Unit or Item. As part of the contract validation process, the system selects the first element found on this list:

- 1. Customer (with a valid contract)
- 2. Org Unit (with a valid contract)
- 3. Item (with a valid contract)
- 4. No contract found, then either a Per Request or Per Item Contract can be created by selecting the Pending No Contract hyperlink and adding a Per Request or Per Item Contract.

1.13 Contract Assignment

Contracts can be assigned to an Item, Customer, Organizational Unit or on a per Incident basis. The following content regarding creating a Contract, assumes that within the system Setup, the Billing>Contracts option is enabled.

When a request is created, the system will check if the Customer has a valid contract. If the Customer is not under contract, the system will check if the Org. Unit is covered, and if not, it will assess the Item contract status. If no contract is in place, the request will be assigned a "Pending - No Contract" Status and locked down until a Contract is created. See: Create a Contract.

An Item, Customer and Organizational Unit can only have one active contract in place at a time but multiple contracts can be queued by assigning a Start Date that falls after an existing Contract's end date. Queued Contracts are visible within the Item, Customer or Org Unit's Contract tab identified by the contract number generated at the point of creation, if Invoicing is not enabled in the system. If Invoicing is enabled in the system and an SLA cost is associated with the contract, a contract number is generated when the invoice payment is processed by a Finance User.

1.13.1 Customer Contracts

Customer contract history is stored within the Contracts tab of the Customer Information screen. All contracts, valid and expired, are listed within the Customer and Items tab of the Contracts screen.

To create a new contract for a Customer:

- 1. Select User>Customers
- 2. Select the Customer Name
- 3. Move to the Contracts tab
- 4. Click Edit

The Add and Delete buttons become available with the Contracts>Customer tab.

| Customer Inform | ation | | | |
|-----------------|------------------------|--------------------|-----------|----------------|
| Contact | Aliases | Items Contracts | | |
| Edit | | | | Michael Angelo |
| SLA Details | 5 | | | |
| Service Level | 1 | | | |
| Contract # | * No Contract Assigned | | | |
| | | | Customers | Items |
| Contract # 👳 | Type SLA | ≣ Start Date | End Date | ≣ |
| | | | | _ |
| | | 0 - 0 of 0 Results | | |
| | | | | Done |

5. Click Add

(If Invoices are enabled in the system, an Invoice number will be automatically generated and assigned to the Contract).

6. Select a Service Level from the list

When selected, the screen expands to display start and end date fields.

| ustomer Information | | | | | | |
|---------------------|--------------------------------|---------------|------------------|-----------------|----------------|-------|
| Contact | Aliases | Items | Contracts | | | |
| Contract | | | | | | |
| Service Level | Warranty | | | | | |
| | Priority | Response Time | Restoration Time | Resolution Time | 24 x 7 support | Alert |
| | Urgent | 6 Hours | 12 Hours | 24 Hours | Yes | None |
| | High | 12 Hours | 24 Hours | 48 Hours | Yes | None |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None |
| Contract Type | Per Customer | | | | | |
| Time | Subscription | - | | | | |
| | Subscription | | | | | |
| Start Date | Time Limited S | Subscription | | | | |
| End Date | Support Hours Support Hours | | | | | |
| | | | | Canc | el 🛛 | Save |

7. Define the Contract Time period

For the Per Customer Contract Type the Time Period for the Contract can be defined as one of the following:

Subscription if selected, the Start and End Dates are automatically set to year from the date of creation, but can be edited if required.

Time Limited Subscription if selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually by entering the length of time for the subscription period, or the system will default to entering a year from the date of creation.

Support Hours if selected, the number of support hours purchased by the Customers should be entered.

Support Hours by Month if selected, set the number of hours purchased per month and define which day of the month contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

- 8. Add any relevant Invoice Notes
- 9. Check the Taxable box, if the Contract is to be taxed
- 10. Click Save

If invoices are enabled and a cost is associated with the SLA, a Warning message is displayed prompting that the invoice needs to be processed by a Finance User before the contract will become available in the system. The invoice can be processed in the Finance >Invoices tab.

11. Click Next to continue

The system reverts to the Contracts summary screen

| | | | | | Done |

13. NOTE: If Invoices are enabled, a new invoice is automatically saved within the Finance>Invoices screen for the newly created Contract. If payment is required, a Pending Invoice Number is displayed and once processed, the Contract details will be included in the Customer Information>Contracts>Customer tab.

The Items tab within the Customer>Contracts screen is used to list all the Items with a Contract that are owned by a Customer.

To delete a current Contract, as a Supervisor User, select **Cancel** next to the Contract Number. Alternatively, to delete a current or queued Contract, within the Contract>Customers tab check the field next to the relevant Contract # and select the Delete button.

1.13.2 Organizational Units Contracts

Organizational Units' Contract history is stored within the Contracts tab of the Org. Unit Information screen. All Contracts, valid and expired, are listed within the Org. Unit, Customer and Items tab of the Contracts tab.

NOTE: To assign a Contract to an Org Unit, a Primary Contact must be nominated for the Org Unit or the system will prompt the User to assign a Primary Contact during the Contract assignment process. This means, prior to creating the Contract assign at least one Customer to the Org Unit and then designate a Customer as the Primary Contact.

To create a new Contract for an Organizational Unit:

- 1. Select User> Organizational Units
- 2. Select the Organizational Unit's Name
- 3. Move to the Contracts tab

| Org. Unit Informatio | n | | | | | |

| | Warranty | Cancel |

5. Select an SLA from the drop-down option

The screen will display the SLA details and the Contract Type locked to Per Item.

| m Information | | | | | | |
|----------------------------|------------------------------|---------------|------------------|-----------------|---------------|---------|
| Information | Details | Costs | Requests | Relationshi | ips Ou | tages |
| Contract Invoice Number | 100016 | | | | | |
| Service Level | | | | | | |
| | Priority | Response Time | Restoration Time | Resolution Time | 24 x 7 suppor | t Alert |
| | Urgent | 6 Hours | 12 Hours | 24 Hours | Yes | None |
| | High | 12 Hours | 24 Hours | 48 Hours | Yes | None |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None |
| Contract Type | Per Item | | | | | |
| Time | Subscription | - | | | | |
| | Subscription | | | | | |
| Start Date | Time Limited Support Hour | | | | | |
| End Date | Support Hour | | | | | |
| Notes | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| Price | \$0.00 | | | | | |
| | \$0.00 | | | | | |
| Taxable | | | | | | |
| Total Cost | | | | | | |
| Total Cost | 90.00 | | | | _ | |
| | | | | | | Cancel |

6. Assign the Time period to be covered by the Contract:

If *Subscription* is selected, the Start and End Dates are automatically completed by the system, but can be edited if required.

If *Time Limited Subscription* is selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually, entering the length of time for the subscription period.

If *Support Hours* is selected, the number of support hours purchased by the Customers should be entered.

If *Support Hours by Month* is selected, set the number of hours purchased per month and define which day of the month contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

7. Add any relevant Invoice Notes

- 8. Check the Taxable box, if the Contract is to be taxed
- 9. Click Save.

If Invoices are enabled in the system, an Invoice number will be automatically generated for the Contract and made available within Finance>Invoices. Payment will need to be processed by a Finance User before the Contract can be enabled in the system. If invoice payment is required before the contract can be enabled in the system the following Warning message is displayed:

10. Click Next

The Contracts information is only populated after the Invoice has been processed. To process the invoice, as a Finance User move to the Finance>Invoices tab. Once the relevant invoice payment has been processed the Contract details will be visible in the Costs >Contracts tab.

| | | | | | | | Done |

The Costs tab provides a summary of the current Contract details. The Contracts tab within the Costs screen, lists all contracts that have been assigned to this Item.

To delete a current Contract, as a Supervisor User, select **Cancel** next to the Contract Number. Alternatively, to delete a current or queued Contract, within the Costs>Contract tab check the field next to the relevant Contract # and select the Delete button.

1.13.4 Per Request Contracts

When a request is created without a valid contract, the system automatically assigns the request a status of Pending - No Contract. The User can associate a contract to either the Item or request within the Contract tab of the request Information screen. A Request Contract is only valid for the life of the request. See: Create a Contract.

1.13.5 Contracts with Invoices Enabled

When the Invoices option is enabled within the application's setup and a Contract is being created, the system automatically generates a Contract Invoice. For the contract to become active in the system, a Finance User must process the invoice. If no cost is assigned to the Service Level (i.e., Warranty), the invoice is automatically processed and the contract is active in the system.

1.13.6 Canceling Contracts

If a Contract is no longer valid, it can be cancelled at any time during the contract period. A Supervisor can cancel the Contract within the Customer, Org, Unit or Item Contracts screen, by

selecting <u>Cancel</u> next to the Contract Number. Contracts that are canceled using this option will record the Reason for cancellation as the Supervisor User name who triggered the cancel action.

A User with the Finance Role can delete a Contract within the list view of the Service>Contracts tab.

To cancel a Contract, as a User with the Finance Role:

- 1. Go to Service > Contracts
- 2. Select a Contract ID to be canceled

The Contract Information screen will appear.

| Contract Informati | on | | | | | |
|--------------------|-----------------|---|-------------------|--------|------------|------------------|

| | | | 0 - 0 of 0 Result | s | | Delete |
| | | | | | Cancel | Save |
| | | | | | Cancer | Save |

3. Click the Cancel Contract hyperlink

A Cancel Reason text box is displayed.

4. Enter an explanation for canceling the Contract

| Cancel Reason | 1 | |
|---------------|-------------|--|
| | Cancel Save | |

5. Click Save

The Cancel Reason is assigned to the Contract and the Contract Expiry date will be marked Expired.

6. Click Done.

NOTE: When a Customer Contract is cancelled and the Customer's associated Org Unit has an active contract in place, the Org Unit Contract details will be displayed within the Contracts>Service Level field of the Customer Information screen.

1.14 Create & Process a Request with Contracts enabled

When the Contracts or Invoices functionality is enabled and a request is created, the system will verify the service entitlement status of the Customer and if a valid contract is not in place, the new request is assigned a status of Pending - No Contract and locked until a valid contract is associated with the request.

In a Request Group where the Customer and Organizational Unit does not have a Contract, if an Item applied to a request has a Contract and another does not, a relevant status will be applied to each request. The User will be able to edit the request with a valid Contract, but the request without a Contract will be locked down to a Pending - No Contract status, until a valid Contract is applied to the request.

The Customer is automatically sent the NoContractCreateRequestSummary email when the request is saved with the Status. A reminder email can be sent to the assigned Customer by the Technician from within the Summary tab by clicking .

Two types of Contracts are used by the system, these include Per Item or Per Request Contracts. They are defined as follows:

- · Per Request covers the period of time for which the request is open and work is done
- Per Item covers the Item, regardless of the number of requests logged against the Item and can be defined as:

Subscription - a contract that covers a specified period of time

Time Limited Subscription - a contract that covers either a specified period of time or number of support hours, whichever limit is reached first

Support Hours - a contract that defines the number of support hours covered

Support Hours by Month - a contract that covers a total number of support hours purchased for a defined timeframe and allocated on a per month basis.

1.14.1 Request with Per Item Contract

To create a Per Item Contract for a request within the Summary tab of the request:

1. Click the Pending - No Contract link

The Contract tab is displayed with Contract Type and Service Level drop-down options.

| Service Request I | nformation | | | | | | | |
|-------------------|------------|----------|---------|-------|-------------|--------|-------------|--------|
| Customer | Contract | Analysis | Summary | Notes | Attachments | Impact | Audit Trail | |
| Contract | | | | | | | | |
| Contract Type | | - | | | | | | |
| Service Level | | • | | | | | | |
| | | | | | | | | Cancel |

2. Select the Contract Type of Per Item

For the Per Item Contract Type the Time Period for the Contract can be defined as one of the following:

Subscription if selected, the Start and End Dates are automatically set to a year from the date of creation, but can be edited if required

Time Limited Subscription if selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually by entering the length of time for the subscription period, or the system will default to entering a year from the date of creation

Support Hours if selected, the number of support hours purchased by the Customers should be entered

Support Hours by Month if selected, set the number of hours purchased per month and define which day of the month the contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

| | | | | | | | | | | Can | cel | Sav |

3. Click Save

The maintenance contract is created.

- 4. Click Next to continue to create the request by defining the Classification and Description.
- 5. NOTE: If Invoices are enabled, a new invoice is automatically saved within the Finance>Invoices screen for the newly created Contract.

1.14.2 Request with Per Request Contract

To create a Per Request Contract for a request within the Summary tab of the request:

1. Click the Pending - No Contract link

The Contract tab is displayed with Contract Type and Service Level drop-down options.

2. Select the Per Request Contract Type

(The SLA Price and Tax option box is displayed, if Invoices are enabled for the system.)

3. Select the SLA

(If required, check the box to indicate if tax is to be applied to the Invoice, which will be applied to the Invoice that is automatically saved within the Finance>Invoices screen when the newly created Contract is saved.)

| Customer | Con | tract Ana | lysis Su | mmary | | | |
|---------------|------------|---------------|------------------|-----------------|----------------|--------|--|
| Contract | | | | | | | |
| Contract Type | Per Reques | st 😫 | | | | | |
| Service Level | Bronze | \$ | | | | | |
| Group | Apply to u | incontracted | | | | | |
| SLA Price | \$20.00 | | | | | | |
| Taxable | | | | | | | |
| Targets | Priority | Response Time | Restoration Time | Resolution Time | 24 x 7 support | Alert | |
| | Urgent | 12 Hours | 24 Hours | 36 Hours | No | Action | |
| | High | 24 Hours | 26 Hours | 60 Hours | No | Action | |
| | Medium | 30 Hours | 48 Hours | 84 Hours | No | Action | |
| | Low | 36 Hours | 60 Hours | 108 Hours | No | Action | |

4. Click Save

(If the Service Level selected for the request has a cost associated with it, the request will be assigned with the status Pending - No Contract. Work cannot commence on the request until payment for the invoice is received.)

5. If the Service Level has no cost i.e., Warranty, the maintenance contract is created and work can commence on the request immediately

6. Click Done.

The screen defaults to the Summary tab.

1.14.3 Grouped Requests and Contracts

Contracts can be applied to all requests within an Incident Group when a *Per Request* contract is created within the Contract tab of a grouped request. The following options are available:

- Per Group applies the Contract to the Request Group as a whole and assigns a single charge for the Contract. On the associated Invoice, if relevant, the SLA Price is distributed evenly across each Request line-item
- Per Request applies the Contract to the Request Group but assigns the SLA Price as an individual charge to each request within the Group. On the associated Invoice, if relevant, the SLA Price is applied to each request line-item.

| Customer | Con | itract Ana | lysis Su | mmary | | | |
|---------------|------------|---------------|------------------|-----------------|----------------|--------|--|
| Contract | | | | | | | |
| Contract Type | Per Reque | st 😫 | | | | | |
| Service Level | Bronze | \$ | | | | | |
| Group | Apply to u | uncontracted | | | | | |
| Charge base | | | 1 | | | | |
| SLA Price | Per Reque | | | | | | |
| Taxable | | | | | | | |
| Targets | Priority | Response Time | Restoration Time | Resolution Time | 24 x 7 support | Alert | |
| | Urgent | 12 Hours | 24 Hours | 36 Hours | No | Action | |
| | High | 24 Hours | 26 Hours | 60 Hours | No | Action | |
| | Medium | 30 Hours | 48 Hours | 84 Hours | No | Action | |
| | Low | 36 Hours | 60 Hours | 108 Hours | No | Action | |

1.14.4 Processing an Invoice

If invoice payment for the SLA contract is required before the User can commence work on the request, the following system message is displayed:

When a request is flagged with this status, the Edit button will not be available within the Summary tab and a User assigned the Finance Role must process invoice payment before the request can be edited.

To process payment for an invoice see: Invoice Payment and Delivery

1.14.5 Invoice Cancellation

To cancel an Invoice for a request:

- 1. Select the Request # id
- 2. Select the Request with the Status Pending No Contract
- 3. Click the Cancel hyperlink in the Summary tab.

This will cancel the Invoice and change the request Status to Cancelled - Unpaid.

1.15 Operational Level Agreements (OLAs)

An OLA is an internally negotiated agreement that identifies the service level expectations between the Service Desk and the Technical Support Teams. OLAs are applied to Workflow States and allow the Service Desk to successfully meet service level expectations. This is achieved by associating an SLA to a Workflow and then assigning, where relevant, OLAs or Underpinning Contracts to separate stages of that Workflow. It should be noted that SLA targets for Response, Restoration and Resolution time must be greater than or equal to the combined OLA and UPC times for each of these targets, to ensure that service level breaches do not occur.

| Workflow - Inc | dent Workflow | |
|------------------|--------------------------------------|---------------|

1.15.1 Details Tab

Creating an OLA

To create a new OLA:

- 1. Select Service >OLAs
- 2. Click New

| OLA Editor | | | | | | |
|-------------------|-----------------------|-----|------------------------|--------|------|---|
| Details | Targets Sta | tes | Teams | | | |
| | | | | | | |
| Details | | | | | | |
| Name | New OLA | | | | | |
| . | | | Find Service Level Mar | nager | | |
| Customer Timezone | | | First Name | Email | | |
| Timezone | (GMT +5:30) New Delhi | - | | | | |
| SLM | | | Last Name | Phone | | |
| Name | | | | | | |
| Email | | | | | | 0 |
| | | | | Cancel | Next | |

- 3. Enter a Name for the OLA

| OLA Editor | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Details | |
| Name* | The name to identify the OLA. |
| Review Date | Details are completed based on the Admin default settings but can be edited by the User. An Alert is sent based on the default days set in the Review SLA Alert field in Admin>Setup>Privileges>Requests. |
| Pause on SLA Holiday | **This option is only displayed if the 'Public Holidays' option has been enabled within the Administrator>Setup>Privileges>Technician tab. |
| | Enable this option, if the OLA is to be adjusted on designated Public Holidays, when an associated SLA has the Pause on Holiday option enabled. Th Public Holidays are defined within the Administrator>Setup>Public Holidays screen and associated with requests via the assigned Technician and their associated Country. |
| Customer Timezone | When enabled, OLA times displayed within the Technician request view uses the Customer timezone. |
| Timezone | This is visible when Customer Timezone is not set and all SLA dates are calculated based on the Timezone set within this field. This is especially applicable for User Work Hours, Blackouts, which also impacts the SLA Reports. |
| SLM (Service Level Manager) | |
| Name | Use the Find Service Level Manager search option |
| Email | to enter the contact details of the Manager who wi monitor the performance of the OLA. |

5. Adjust the Review Date, if necessary

(A reminder Alert will be sent to the SLM, based on the default days set in Admin>Setup>Privileges>Request.)

6. Tick the Customer Timezone option, if relevant

Apply this option if the User is to view OLA due dates using the Customer Timezone or complete the Timezone option.

7. Search and select a Service Level Manager.

A Service Level Manager (SLM) is a User that has been assigned with the Service Level Management Process.

- 8. Move to the Targets tab
- 9. Complete the following information:

10. _____

| SLA Editor | |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Targets | |
| Targets | <i>Common</i> : Select Common if the OLA is to apply across Incidents, Requests, Problems and Change Management. |
| | <i>Per Process</i> : If the OLA is specific to a Process, select Per Process and choose a Process displayed in the drop-down list. |
| Interval | Define if the time is to be calculated in Hours or Minutes. |
| Service Time | |
| Priority | Urgent, High, Medium and Low |
| Milestones | |
| Initial Response | The maximum time the Customer would wait from the point of request creation before receiving a Note update for a Technician. The Response trigger is stopped when a Note has been added to the request by the assigned Technician and an email is sent to the Customer. If the Response Time is reached, without a Note being added, the request will be escalated. |
| Restoration Time | The maximum time the Customer would wait from the time the request was created until a workaround or temporary fix has been implemented. The Restoration trigger stops by assigning the request a Workflow State that has to the OLA Restoration option set to Yes. By default, this Workflow State is Open - Restored. |
| Resolution Time | The taken time from the point of request creation until it the request is moved to a Workflow State with the OLA Resolution option set to Yes. Any of the default Workflow Exit States stop the Resolution Timer. |
| Notify Override | If the system is to override the default notification method set for a request when the Priority being edited is assigned to a request, check this option. |
| Notification Type | Set Email or SMS as the type of notification when the override action is applied to a Priority. |
| Alerts | |
| Reminder | Sends a reminder email to the Technician when the defined percentage of time elapses for a Response. Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the OLA. Note, Alert intervals are not cumulative. |

| SLA Editor | |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Warning | Sends a warning email to the Technician when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the OLA. |
| Escalation | Escalates the request to a higher escalation layer when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the OLA. It should be noted that the Service Level Manager is also notified when an OLA is breached. |
| Support | |
| 24 x 7 | Do not amend if the OLA is to apply 24 hours a day, 7 days a week. |
| Normal Support | Select if service hours are to be defined for the OLA. When checked, define the service hours by either selecting a template (Templates are configured by the Administrator in the Setup>Localization>Hours tab) or manually define the days and time by making selections within the drop-down lists. |

11. Add one or multiple Warning Alerts, if required

NOTE: Trigger intervals are not cumulative

In the default OLA for Warranty, the Urgent default times of 6, 12 and 24, mean 6 hours for the Response stage, 12 hours for Restoration from initial creation, and 24 hours to reach the Resolution from initial creation.

1. Define the support hours

Within 24 X 7, if the OLA's urgent Initial Response field is set to six hours, and an urgent request that uses the OLA is created at midnight in the assigned Technician's time zone, those six hours will expire by 6:00 AM. This is the option to use if your support is staffed 24 hours a day.

Normal support ensure request timers do not run when Technicians are not available. For instance, if the support hours are 9:00 AM to 5:00 PM and the SLAs are as such, the urgent requests' timer would not start ticking until 9:00 AM the following business day and would expire at 3:00 PM.

- 2. Click Save
- 3. Click Done.

Now associate the OLA with a Team within the Service tab of the Team Information screen.

The OLA will also be available within the OLA options displayed when OLA is selected as a Contract Type option within the Workflow Status editor screen.

1.15.2 States Tab

The OLA States tab lists the Workflow stages that are assigned to the OLA.

1.15.3 Teams Tab

The Teams tab displays the Team Names and Processes that are assigned to the OLA.

Assigning an OLA to a Team

OLAs are assigned to Teams within the Service Tab of the Team Information screen, when Teams are created or edited. For more information about assigning OLAs to Teams, see Teams. To view OLAs associated with Teams, sort the User>Team List View using the OLA column header. The Lead Technician and ITIL Process supported by the Team are also displayed.

OLAs and Blackout Periods

If a request is assigned an OLA State and the request's SLA is in a Blackout Period, the OLA will adopt the SLA Blackout Period. This means that the OLA timers will stop until the Blackout Period has elapsed.

1.16 Underpinning Contracts

Underpinning Contracts (UCs) are used to manage support services provided to the Service Desk by external service providers. These Contracts ensure the external parties maintain their service obligations to the Service Desk, which ensures the Service Desk meets the SLA expectations of its Customers.

To successfully meet SLA expectations, the system allows the Service Desk to associate each Workflow State of a request with an Operational Level Agreement (OLA) or Underpinning Contract. It should be noted that SLA targets for Response, Restoration and Resolution time must be greater than or equal to the combined OLA and UC times for each of these targets, to ensure that service level breaches do not occur.

| Workflow - Inci | ident Workflow |
|---------------------------|------------------------------------------------------------------|
| Workflow | Lifecycle Status |
| Status | |
| Name | bpen |
| Active State | ● Yes © No |
| Entry Point | |
| Exit Point | |
| Has Notes | |
| Service | |
| SLA Active | ● Yes ◎ No |
| SLA Restoration | Ves 💿 No |
| SLA Resolution | Ves I No |

| Underpinning Contract | |
| Underpinning Contracts | Available Underpinning Contracts Selected Underpinning Contracts |
| Contracts | New UPC1 New UPC None selected |
| | Ŧ |
| Default Contract | • |
| Assign SLM | ● Yes ◎ No |

When a request moves into a State that is governed by an Underpinning Contract, for internal contract monitoring, the request can be assigned to a Service Level Manager. This allows the Manager to maintain control of the request and to easily follow up with the external service provider, if required.

1.16.1 Details Tab

Creating an Underpinning Contract:

To create an Underpinning Contract for use within a Workflow State:

- 1. Select Service>Underpinning Contracts
- 2. Click New

| Underpinning Cont | tract Editor | | | |
|-------------------|------------------------------------|-------------------------|----------|------|
| Details | Targets States | | | |
| | | | | |
| Details | | | | |
| Name | New UPC | | | |
| Vendor | - 🕀 | | | |

3. Enter the Contract Name

| UPC Editor | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Details | |
| Name* | The name to identify the UC. |
| Vendor | The name of the service provider supporting the contract. Select from the list or create a new Vendor. |
| Review Date | Details are completed based on the Admin default settings but can be edited by the User. An Alert is sent based on the default days set in the Review SLA Alert field in Admin>Setup>Privileges>Requests. |
| Customer Timezone | When enabled, UPC times displayed within the Technician request view using the Customer timezone. |
| Timezone | This is visible when Customer Timezone is not set and all UPC dates are calculated based on the Timezone set within this field. This is especially applicable for User Work Hours, Blackouts, which also impacts the UPC Reports. |
| SLM (Service Level Manager) | |
| Name | Use the Find Service Level Manager search option |
| Email | to enter the contact details of the Manager who wi monitor the service provider's ability to meet their contractual obligations. |

- 5. Select a Vendor from the drop-down list or click 🚭 to enter new vendor details
- 6. Adjust the Review Date, if necessary

(A reminder Alert will be sent to the SLM based on the default days set in Admin>Setup>Privileges>Requests.)

7. Tick the Customer Timezone option, if relevant

Apply this option if the User is to view UC due dates using the Customer Timezone or define the UC Timezone.

- 8. Search and Select a Service Level Manager using the Find Service Level Manager field
- 9. Move to the Targets tab

| Details | i Ta | argets | States | | | |

| Service Time | Priority | Response Time | Restoration Time | Resolution Time | 24 x 7 support | Alert |
| | Urgent | 6 Hours | 12 Hours | 24 Hours | Yes | None |
| | High | 12 Hours | 24 Hours | 48 Hours | Yes | None |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None |
| | | | | | | |

10. Complete the following information:

11. _____

| SLA Editor | |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Targets | |
| Targets | <i>Common</i> : Select Common if the UC is to apply across Incidents, Requests, Problems and Change Management. |
| | <i>Per Process</i> : If the UC is specific to a Process, select Per Process and choose a Process displayed in the drop-down list. |
| Interval | Define if the time is to be calculated in Hours or Minutes. |
| Service Time | |
| Priority | Urgent, High, Medium and Low |
| Milestones | |
| Initial Response | The maximum time the Customer would wait from the point of request creation before receiving a Note update for a Technician. The Response trigger is stopped when a Note has been added to the request by the assigned Technician and an email is sent to the Customer. If the Response Time is reached, without a Note being added, the request will be escalated. |

SLA Editor

| Restoration Time | The maximum time the Customer would wait from the time the request was created until a workaround or temporary fix has been implemented. The Restoration trigger stops by assigning the request a Workflow State that has to the UC Restoration option set to Yes. By default, this Workflow State is Open - Restored. |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Resolution Time | The taken time from the point of request creation until it the request is moved to a Workflow State with the UC Resolution option set to Yes. Any of the default Workflow Exit States stop the Resolution Timer. |
| Notify Override | If the system is to override the default notification method set for a request when the Priority being edited is assigned to a request, check this option. |
| Notification Type | Set Email or SMS as the type of notification when the override action is applied to a Priority. |
| Alerts | |
| Reminder | Sends a reminder email to the Technician when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the UC. Note, Alert intervals are not cumulative. |
| Warning | Sends a warning email to the Technician when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the UC. |
| Escalation | Escalates the request to a higher escalation layer when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the UC. It should be noted that the Service Level Manager is also notified when an OLA is breached. |
| Support | |
| 24 x 7 | Do not amend if the UC is to apply 24 hours a day, 7 days a week. |
| Normal Support | Select if service hours are to be defined for the UC. When checked, define the service hours by either selecting a template (Templates are configured by the Administrator in the Setup>Localization>Hours tab) or manually define the days and time by making selections within the drop-down lists. |

12. Add one or multiple Warning Alerts, if required.

Enter the percentage of time to elapse for each interval, which will trigger a Warning to be sent via email to the Service Level Manager when the specified percentage is reached.

For example, the Urgent default times of 6, 12 and 24, mean 6 hours for the Response stage, 12 hours for Restoration from initial creation, and 24 hours to reach the Resolution from initial service request creation.

1. Define the support hours

Within the Targets tab of the Underpinning Contracts Editor screen the default support hours are set to 24x7.

For 24 X 7, if the UC's urgent Initial Response field is set to six hours, and an urgent request that uses the UC is created at midnight in the assigned Technician's time zone, those six hours will expire by 6:00 AM. This is the option to use if your support is staffed 24 hours a day. Normal support ensures request timers do not run when Technicians are not available. For instance, if the support hours are 9:00 AM to 5:00 PM and the SLAs are as such, the urgent requests' timer would not start ticking until 9:00 AM the following business day and would expire at 3:00 PM.

- 2. Click Save
- 3. Click Done.

1.16.2 States Tab

The Underpinning Contract States tab lists the Workflow stages that are associated with the Underpinning Contract. This association is made within the relevant States of the Workflow and cannot be edited within this screen. See: Workflows.

1.17 Incident and Problem Workflows

Workflows define the sequence of States to be followed by requests logged with the application. Within the system an unlimited number of Workflows can be configured for Incident and Problem Management.

When deployed, the system includes one fully customizable Workflow for each of the Incident and Problem Management Processes. These can be used immediately, or can be edited to reflect more comprehensively your support service requirements.

1.17.1 SLAs and Workflows

Each Workflow can be associated with one or more SLAs. The SLA provides the contract time that must be met by requests using the Workflow.

For example, if the Service Desk uses one Incident Workflow, which has multiple SLAs assigned to it, logged Incidents follow the same Lifecycle but the time allowed within each stage is based on the SLA contract requirements. The SLA assigned to either the Item, Customer, Organizational Unit or Incident determines which Workflow is selected for the Incident.

1.17.2 Editing default Incident and Problem Workflows

Incident and Problem Workflows can be configured to reflect the organizational Service Desk requirements for these processes. The default Workflows include States that are used by the business logic of the application to maintain control of the request Lifecycle.

It is recommended that the Selected States used by the application, as indicated by an asterisk, not be removed from the Workflow Lifecycle. However, other Available States can be added to the Selected States list.

The following table contains the default Incident and Problem Workflow States.

The * denotes the system-used States.

| Default State | Description |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cancelled | Used to cancel a request when it is no longer to be worked on. |
| Cancelled Unpaid* | Used by the system from the Pending - No Contract State when Contracts and Invoices are enabled. See Billing. |
| Closed Resolved | Used when the request has been resolved. This is the Default Closed State for the Incident and Problem Workflows. This start marks the end of SLA timing and is used when measuring SLA times for Reports. |
| Closed Restored | Used when the request has been closed and the service restored for the Customer. This start marks the end of SLA timing and is used when measuring SLA times for Reports. |
| On Hold | Used when the request is on hold. By default this State stops SLA timing. |
| On Hold - Client Action | Awaiting a response from the Customer. When a Note is added to the request by the Customer, the system will change the status to Open. |
| On Hold - Pending Approval* | An Incident automatically moves to this State when the "Propose" button is used for sending an Incident Note. This means the CloseRequest email is sent to the Customer asking them to verify the proposed Solution. If the Customer does not respond to the email, the request is automatically closed by the number of days set within the Handshaking Privilege. (The email handshaking option is set by the Administrator in Setup>Privileges> Requests.) |
| | By clicking on the URL provided in the email, the Customer ensures the request retains an open and active state. |
| On Hold - Process Escalated* | A request moves into this state when a Problem or Change has been created within the Analysis tab of the request. The timer stops and there are no future States as the request will be closed when the related Problem or Change is closed. |
| Open | Used to indicate that the request is currently open. |
| Open Restored | Used to identify that initial service to the Customer has been restored, or a Workaround is in place but the request is not resolved. This State stops the initial Response Timer if a Note has not been added to the request by a Technician. |
| Pending | The default first State for new requests. |

| Default State | Description |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pending - No Contract* | Used when a request is created but there is no active Contract. A Contract needs to be created for either the Customer, Incident/Problem, Item or Organizational Unit. |
| | NOTE: Do not use this State as the Default Open State for a Workflow. |

1.17.3 Editing Template Workflows

Prior to creating or editing existing Workflows, it is suggested that the preferred Workflow Lifecycle be mapped externally to the application.

If States are to be added or removed from the Workflow, it is recommended that all changes be made to the Current States list within a Workflow's Lifecycle tab, prior to mapping the Lifecycle. This ensures that all relevant status options exist in the Available States field, for allocation to the Previous and Next Workflow States.

Once the Workflow Lifecycle has been defined, edit an existing Workflow by:

1. Select Service>Workflows

The Workflows screen appears.

| Workflows | |
|-----------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| New Delete Name Typical Change Workflow | All Workflows [sys] All Workflows [sys] Change Request Workflows [sys] Incident Workflows [sys] Problem Workflows [sys] Release Workflows [sys] |
| Standard Change Workflow Service Request Workflow | Service Request Workflows [sys] |
| Release Workflow Problem Workflow | |
| Incident Workflow | |
| Emergency Change Workflow Change Deployment Workflow | + |
| 1 - 8 of 8 Results | |

2. Click the Workflow name hyperlink to modify or duplicate an existing template

Or, select New to create an entirely new Workflow. The Workflow tab appears and is used to define the Name, select the Process, set the default Open and Closed States for the Workflow. The States available within these lists are all those marked as an Entry or Exit point in the Lifecycle tab

3. Click Edit

The Duplicate button is displayed, select if relevant.

4. Complete the details of a new Workflow

Enter the Name, select the Process and enter a Description and click Next.

| Workflow - New Wo | orkflow |
|-------------------|-------------------------------------------------------|
| Workflow | Lifecycle |
| Workflow Name | Incident - Events |
| Process | Incident |
| Description | Incidents logged automatically by event monitor tools |
| | |
| | |
| | |
| | њ. |
| | Cancel Next |

- 5. In Edit mode amend relevant details within the Workflows tab:
- 6.

| Field Name | Description |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Workflow Name | Enter a relevant name for the Workflow. |
| Process | Select from the drop-down options the process type of Incident or Problem Workflow. |
| Default Open Status | The open State that a request adopts when it is assigned the Workflow. |
| Default Closed Status | The closed State that indicates the request has reached the end of the Workflow Lifecycle. |
| Email Note Action | This applies to requests that are in an non-active SLA State (i.e., where the SLA Active option is set to No). The option selected here determines the system behavior, regarding an SLA inactive request, when an email is received from a Customer. |
| | Do Nothing: Means the status of the request remains the same and the SLA timers are not re-activated. The email is added as a Note and also sent to the Technician. |
| | Update Status: Means the status of the request is changed to an SLA Timer Active state, the email is added as a Note and it also sent to the Technician. |

| Field Name | Description |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Update Status to | This field is displayed when the Update Status option is selected for the Email Note Action field. It allows the User to set a Next State, which is defined as an SLA Timer Active State, where a request will move to after an email has been received from a Customer regarding a request in an inactive SLA State. |
| SLA | Allows the User to assign an SLA to govern the lifecycle period of the Workflow.(See SLAs & Workflows above, for more information.) |
| | One or more SLAs can be associated with the Workflow. |
| Description | Defines the purpose of the Workflow |

7. Use the Find SLA option to change or add SLAs assigned to the Workflow

Click 🕒 to access the complete list of SLAs in the system. Refer to the above section for more information regarding SLAs and Workflows.

8. Edit the brief description that explains the purpose of the Workflow, if required

NOTE: The Contract Time field is visible when OLAs and/or Underpinning Contracts are associated with the Workflow States

It displays the accumulated amount of time of the OLAs and/or Underpinning Contract associated with the stages of the Workflow. This contract time cannot exceed the resolution time of the SLA assigned to the Workflow.

1. Click Save

| Workflow - Workflow1 | | |

| | Done | |

2. Select the Lifecycle tab to define Workflow States

1.17.4 Adding or editing Workflow States:

1. Edit the State details

Click the State name hyperlink in the Workflow map or in the table of States, to display the Status information screen. Or, click New to create a new Workflow State.

| Workflow - Incident Workflow | | | |
|------------------------------|-----------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------|
| Workflow | Lifecycle | Status | |
| Status | | | |
| Name | Open | | |
| Active State | ● Yes ◎ No | | |
| Entry Point | | | |
| Exit Point | | | |
| Has Notes | | | |
| Service | | | |
| SLA Active | Yes No | | |
| SLA Restoration | © Yes ◎ No | | |
| SLA Resolution | © Yes ◎ No | | |
| Contract Type | ● None ○ OLA ○ U | nderpinning Contract | |
| Previous States | | | |
| | Available states | | Selected states |
| | On Hold - Process Escalated | 00 | Closed - Restored On Hold On Hold - Client Action On Hold - Pending Approval Open - Restored Pending |
| Next States | | | |
| | Available states | | Selected states |
| | Cancelled - Unpaid | O O | Cancelled Closed - Resolved Closed - Restored On Hold On Hold - Client Action On Hold - Pending Approval |
| | | Delete | Cancel Save |

| Status | |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name | System Required States, the States marked with an asterisk in the States Table, can be re-named if desired. For newly created States, enter a name. |
| Active State | Assign Yes for requests to be available in the Home tab by default, when assigned to this stage of the Workflow. |
| | Yes should be used for States where the User is actively working on the request or waiting for updates."No" generally applies to Workflow exit points and will only be available by default within the relevant Process tab list view. |

| Status | |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Entry Point | An Entry Point is used to indicate the start of a Lifecycle. To make the state a Workflow Entry Point, select the Entry Point checkbox. |
| | As the Entry Point is the first state, the Previous States field will be removed. |
| Exit Point | Select whether the State will be an Exit Point. An Exit Point is used to indicate the end of a Lifecycle. |
| | NOTE: A Workflow can have only one Entry Point but multiple Exit Points. |
| Has Notes | Allows the Supervisor to include instructions or add relevant details for requests that move into this State. The information is configured within the Articles tab that is displayed when this option is enabled. |
| Listener Class | This field is visible if the Outbound Web Services option is enabled in the Admin>Setup>Privileges>System tab. |
| | Complete this field, if assigning this State to a request is to trigger an event in an external system. |
| | This field should contain the name of a Java class that implements the interface. |
| SLA Active | Links the status with timing set within SLAs and OLAs. When the option is set to No, the SLA/OLA timers stop and the triggers for escalations and warnings do not fire. |
| SLA Restoration | When timing is set using SLAs and OLAs, the SLA Restoration Time trigger is disabled when the request is moved to this state. Restoration Time indicates a Customer has access restored or a temporary workaround. Reports on Restoration Time are measured from when the Restoration Time trigger is disabled. |
| SLA Resolution | Allows the State selected to be used to mark the SLA Resolution Time. This will be used in SLA reporting. |
| Contract Type | Defines if the Workflow State will be managed by an internal (OLA) or external (Underpinning Contract) support agreement. If OLAs or Underpinning Contracts are assigned to a Workflow Lifecycle, the Workflow SLA Resolution Time cannot be exceeded by the sum of Resolution Times for all Contract Types assigned to the Workflow Lifecycle. |
| Assign SLM | This field is displayed when an UC is associated with the Workflow State. Use this field to define if the request ownership is to be maintained by the Assigned Technician or moved to the Manager of the SLA associated with the request. |

Status

| Previous States | If the State is not an Entry Point, use the arrow button to select Previous States from the Available States and choose when this State will appear as a drop-down menu option in the Next Action field. |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Next States | If the State is not an Exit Point, use the arrow button to select the Next States. A request can move to, in the Next Action field of a request Information Summary tab. |

- 2. Delete the State if required, or Name/Rename the State
- 3. Enter all State information up to the SLA Resolution field
- 4. Save the updated State details

NOTE: It is recommended all States that are to be included in the Workflow be added or re-named now

After all States have been entered in the system, the mapping of the Workflow can be more easily achieved.

- 1. Continue to edit, add or delete States until all relevant States exist for the Workflow
- To create the Workflow Lifecycle, States need to be assigned to the transitional states of Previous and/or Next

To move Available States to the Previous State or Next State field, open the Status Details screen by clicking the State object in the Workflow map or select the State hyperlink in the table beneath the Workflow map.

3. Assign States to be Next and/or Previous States

For the Current Status highlight an option in the Available State list and click the right-pointing arrow to move it to the Selected States field.

4. NOTE: When a State is used as a Previous and a Next State, it allows a request to move forward and backward in a Lifecycle

An Open State cannot have any previous States and a Closed State cannot have any Next States.

- 5. Click Save to return to the Workflow map and to access other States to build on the Workflow Lifecycle
- 6. Repeat Steps 14 to 16 until all transitional stages of the Workflow have been mapped

NOTE: To successfully save a Workflow, the sum Resolution Time of the individual Contract Types assigned to each transitional state of the Workflow Lifecycle, must be less than or equal to the Workflow's SLA Resolution Time

1. Click Save.

The visual representation of the Workflow is displayed.

1.17.5 Workflow Map

The Workflow Map is a visual representation of the Workflow Lifecycle. The map displays the relationship between each Lifecycle State by using different colors to represent the type of Lifecycle State.

| Color | | |
|--------|---------------------------------------------|--|
| Blue | Indicates the Entry point of the Lifecycle. | |
| Orange | Is a Transitional stage of the Lifecycle. | |
| Red | Indicates the Exit point of the Lifecycle. | |

Detailed information about a Lifecycle State can be accessed by clicking on the State field within the map.

1.17.6 Deleting a Workflow State

It may be necessary to delete a default State or a State that is no longer in use. Note that a State cannot be deleted if it has been assigned to a request.

To delete an unused State:

- 1. Select Service>Workflows
- 2. Click on the Workflow Name hyperlink
- 3. Click on the State Name hyperlink in the States Table beneath the Workflow Map
- 4. Click Delete
- 5. Select Save.

The State will be erased from the States list.

1.18 Billing: Contracts and Invoices

Billing within the system allows support organizations to manage their Customers' service and support contracts. This can be achieved by the system Administrator enabling the preferences of Contracts, with or without the preference of Invoices, within the Billing option of the Setup tab.

| Billing | |
|------------------------|----------------------|
| Setup | Contracts |
| Billing Module | |
| Enable Purchase Orders | Yes No |
| Enable Contracts | Yes No |
| Enable Invoices | Yes No |
| Display SLA Prices | Yes No |
| Email Notifications | Enabled Disabled |
| Global Settings | |
| Currency | United States Dollar |
| | Save |

When Contracts are enabled without Invoices, system contracts can be created without the need for charging Customers for the support provided. Whereas, the Contracts option combined with Invoices allows the application to manage service contracts and process payment within the one facility.

There are a number of Contract Types available within the system, and these include:

- · Per Request covers the period of time for which the request is open and work completed
- Per Item covers the Item, regardless of the number of requests logged against the Item but can be created for the following:

Subscription - a contract that covers a specified period of time

Time Limited Subscription - a contract that covers either a specific time period or number of support hours, whichever limit is reached first

Support Hours - a contract that defines the number of support hours covered

Support Hours by Month - a contract that covers a total number of support hours purchased for a defined timeframe and allocated on a per month basis.

When Billing is enabled in the application's Setup, a maintenance contract must exist for either a Customer, Organizational Unit or Item, before a request can be processed. For more information on creating a maintenance contract see Contracts.

1.18.1 Contract Validation Process

When a request is created and Contracts are enabled with Invoices, the system validates the contract status for a Customer, Organizational Unit or Item. As part of the contract validation process, the application selects the first element found on this list:

- 1. Customer (with a valid contract)
- 2. Org. Unit (with a valid contract)
- 3. Item (with a valid contract)
- 4. Customer (with a pending contract)
- 5. Org. Unit (with a pending contract)

- 6. Item (with a pending contract)
- 7. No contract found, then either a Per Request or Per Item contract is created through the request.

NOTE: When a Pending Contract is selected, the Contract must be processed before work can be undertaken on the request.

1.19 Service Request and Change Management Workflows

Service Request and Change Management Workflows define the sequence of States to be followed by Service Requests and Change Requests (RFC) logged with the Service Desk. These Workflows are unlimited and fully configurable, to cover the diverse range of business change implementations required by an organization.

1.19.1 SLAs and Workflows

Each Workflow can be associated with one or more SLAs. The SLA provides the contract time that a Workflow must adhere to.

For example, if the Service Desk uses a Change Workflow, which has multiple SLAs assigned to it, Change Requests that use that Workflow follow the same Lifecycle but the time allowed within each stage is based on the SLA contract requirements. The SLA assigned to either the Item, Customer, Organizational Unit or Request determines which Workflow is selected for the Change Request.

1.19.2 Approval States

Approval States in Service Request and Change Workflows provide the facility for Customers, Line Managers and Manager Users to accept or reject Request activity. If a State has the Approval State option enabled, the type of Approval determines who, be it a Manager or Customer User, is assigned to the State and it is not possible for other User Roles to also be assigned to the State.

Requests assigned a Customer or Line Manager Approval State can be processed through the Customer Portal or through Email. A request can only be assigned a Line Manager Approval State if the Customer associated with the Request is assigned with a Line Manager within their Customer Information screen. The system will validate this association prior to saving the Request and the User assigned to the Request when moved into the Line Manager Approval State will be the Line Manager defined in the Customer Information screen. When Requests are in a Customer or Line Manager Approval State, the only User who can edit the Request is the Team Lead.

Team Manager Approval States only allow Users with the Manager Role to be assigned to the State. It should be noted that a Technician, Supervisor or Partner User can also be assigned a Manager Role within their User Information screen, which will allow them to be assigned as Managers in the Team and then to Manager Only Approval States. The Managers are associated with an Approval State within the Team Information screen. First, define the Manager Group within the Group tab of the Team Information screen, and then assign that Group to the relevant Workflow State in the States tab of the Team Information screen.

IMPORTANT

Workflow behavior will be the same if you approve the request from Customer Portal, User Portal, or Email.

For more information about Manager assignment to Approval States, see:Service & Change Teams.

1.19.3 Editing a Default Workflow

To edit a Service Request or Change Workflow:

1. Select Service>Workflows

The Workflows screen appears.

2. Click the Workflow name hyperlink to modify or duplicate an existing template

Or, select New to create an entirely new Workflow. The Workflow tab appears and is used to select the Process, set the default Open and Closed States for the Workflow. The States available within these lists are all those marked as an Entry or Exit point in the Lifecycle tab.

3. Click Edit

The Duplicate button becomes available, select if relevant.

4. Complete the details for a new Workflow

Enter the Name, select the Process and enter a Description and click Next.

| Workflow - Problem Workflow | | |
|-----------------------------|------------------------------------------|--|
| Workflow | Lifecycle | |
| Edit | | |
| Workflow Name | Problem Workflow | |
| Process | Problem | |
| Default Open Status | Pending | |
| Default Closed Status | Closed - Resolved | |
| Note Action | Do nothing | |

| Description | Configurable Problem Management workflow | |
| | 5 5 | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | Done | |

- 5. In Edit mode amend relevant details within the Workflows tab:
- 6.

| Field Name | Description |
|---------------------|-------------------------------------------------------------------------------------------|
| Workflow Name | Enter a relevant name for the Workflow. |
| Process | Select from the drop-down options the process type of Change or Service Request Workflow. |
| Default Open Status | The open state that a Request adopts when it is assigned the Workflow. |

| Field Name | Description |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Default Closed Status | The closed state that indicates the Request has reached the end of the Workflow Lifecycle. |
| Email Note Action | This applies to Requests that are in a non-active SLA State (i.e., where the SLA Active option is set to No). The option selected here determines the system behavior, regarding an SLA inactive Request, when an email is received from a Customer. |
| | Do Nothing: Means the status of the Request remains the same and the SLA timers are not re-activated. The email is added as a Note and also sent to the Technician. |
| | Update Status: Means the status of the Request is changed to an SLA Timer Active State, the email is added as a Note and it also sent to the Technician. |
| Update Status to | This field is displayed when the Update Status option is selected for the Email Note Action field. It allows the User to set a Next State, which is defined as an SLA Timer Active State, where a request will move to after an email has been received from a Customer regarding a Request in an inactive SLA State. |
| SLA | Allows the User to assign a SLA to govern the lifecycle period of the Workflow.(See SLAs & Workflows above, for more information.) |
| Description | Defines the purpose of the Workflow |

7. Use the Find SLA option to change or add SLAs assigned to the Workflow

Click 🚱 to access the complete list of SLAs in the system. Refer to the above section for more information regarding SLAs and Workflows.

| Workflow - Problem Workflow | | | | | |
|-----------------------------|---------------------------------|-----------------|---------|--|--|
| Workflow | Lifecycle | | | | |

2.

| Status | |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item Editable | Select this option to allow the details of an Item to be edited when a Request is moved into this State . When this option is enabled for a Workflow State, is visible next to the Item Type link in the Summary tab of the Request. |
| KBA Approval | Enable this option as part of the KBA Approval process, which displays the Accept, Revise and Reject buttons for the User to publish, advise content revision or reject content. |
| | Enabling this option, removes the Next States fields and requires the User to define where the request will move to if the Accept and Reject buttons are selected. If the Revise button is selected, the Request will move to the "On Hold - KBA Rework" system state. See:KBA Content Approval. |
| Entry Point | An Entry Point is used to indicate the start of a Lifecycle. To make the state Workflow Entry Point, select the Entry Point checkbox. |
| | As the Entry Point is the first state, the Previous States field will be removed. |
| Exit Point | Select whether the state will be an Exit Point. An Entry Point is used to indicate the end of a Lifecycle. |
| | NOTE: A Workflow can have only one Entry Point but multiple Exit Points. |
| Has Notes | Allows the Supervisor to include instructions or add relevant details for Requests that move into this State. The information is configured within the Notes tab that is displayed when this option is enabled. |
| | Information and attachments included on the Notes tab, are displayed as a scroll-over when the Request moves into the State. |
| Listener Class | This field is visible if the Outbound Web Services option is enabled in the Admin>Setup>Privileges>System tab. |
| | Complete this field, if assigning this State to a request is to trigger an event in an external system. |
| | This field should contain the name of a Java class that implements the interface com.livetime.ws.listenWorkflowListener that has been compiled into a jar file and added to the LiveTime classpath. Please contact support for further details. |
| SLA Active | Links the Status with timing set within SLAs and OLAs. When the option is set to No, the SLA/OLA timers stop and the triggers for reminders, escalations and warnings do not fire. |

| Status | |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SLA Restoration | If the 'Yes' option is selected for SLA Restoration, it means that Requests that move into this Stage of the Workflow have met the SLA Restoration Time. |
| SLA Resolution | If the Yes option is selected for SLA Resolution, it means that Requests that move into this Stage of the Workflow have met the SLA Resolution Time. |
| Contract Type | Defines if the Workflow State will be managed by an internal (OLA) or external (Underpinning Contract) support agreement. If OLA's or Underpinning Contracts are assigned to a Workflow Lifecycle, the Workflow SLA Resolution Time cannot be exceeded by the sum of Resolution Times for all Contract Types assigned to the Workflow Lifecycle. |
| Assign SLM | This field is displayed when an UPC is associated with the Workflow State. Use this field to define if the request ownership is to be maintained by the Assigned Technician or moved to the Manager of the SLA associated with the request. |
| Previous States | If the State is not an Entry Point, Previous States can be assigned to the Workflow stage. Highlight the relevant State and use the arrow button to move Available States to the Previous States field. These options designate the Workflow stages a Request can come from, before it arrives in this Workflow State. |
| Next States | If the State is not an Exit Point, Next States can be assigned to the Workflow state. Use the arrow button to select the Next States from the Available States. These options are included in the Next Action drop-down menu of a Request. |

| Status | |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Accept State | (Visible when the Approval State or KBA Approval option is Yes.) |
| Approval | Displays the States that a Request can move to when a Request action is Accepted. Select the appropriate State, for the system to automatically route the Request when the Accept option is selected. |
| | Customer when selected, means the request will be assigned to the Customer associated with the request to accept/reject request activity. The Customer will be able to access the accept/reject icons in the Customer Porta to process the request. |
| | Line Manager, select if the request is to be forwarded to a system user with the Custome Role, who will process the approval in relatio to the Customer associated with the request. The Customer/Line Manager will be able to access the accept/reject icons in the Custome Portal to process the request. |
| | Team Manager select if a single Manager Use assigned to the Team is to process the Request. |
| | Team Managers# if selected, set the number of Managers that are required to Approve the Request before the system will automatically apply the defined Accept or Reject State. |
| | Team Managers% if selected, set the percentage weighting that must be achieved by Managers voting before the system will automatically apply the defined Accept or Reject State. When selected, define the percentage weighting. |
| Reject State | (Visible when the Approval State or KBA Approval option is Yes.) |
| | Displays the States that a Request can move to when a Request action is Rejected. Select the appropriate State, for the system to automatically route the Request when the Reject option is selected. |

- 3. Delete the State if required, or Name/Rename the State
- 4. Enter all State information up to the SLA Resolution field
- 5. Save the updated State details

NOTE: It is recommended that all States that are to be included in the Workflow be added or renamed now

After all States have been entered in the system, the mapping of the Workflow can be more easily achieved.

- 1. Continue to edit, add or delete States until all relevant States exist for the Workflow
- To create the Workflow Lifecycle, States need to be assigned to the transitional states of Previous and/or Next

To move Available states to the Previous State or Next State field, open the Status details screen by clicking the State field in the Workflow map or select the State hyperlink in the table beneath the Workflow map.

3. Assign States to be Next and/or Previous States

For the Current Status highlight an option in the Available State list and click the right-pointing arrow to move it to the Selected States field.

NOTE: When a State is used as a Previous and a Next State, it allows a request to move forward and backward in a Lifecycle

An Open State cannot have any previous States and a Closed State cannot have any Next States.

- 1. Click Save to return to the Workflow map and to access other States to build on the Workflow lifecycle.
- 2. Repeat Steps 13 to 16 until all transitional stages of the Workflow have been mapped.

NOTE: To successfully save a Workflow, the sum Resolution Time of the individual Contract Types assigned to each transitional state of the Workflow Lifecycle, must be less than or equal to the Workflow's SLA Resolution Time.

1. Click Save.

The visual representation of the Workflow is displayed.

1.19.5 Workflow Map

The Workflow Map is a visual representation of the Workflow Lifecycle. The map displays the relationship between each Lifecycle State by using different colors to represent the type of Lifecycle State.

| Color | |
|--------|---------------------------------------------|
| Blue | Indicates the Entry point of the Lifecycle. |
| Orange | Is a Transitional stage of the Lifecycle. |
| Red | Indicates the Exit point of the Lifecycle. |

Detailed information about a Lifecycle State can be accessed by clicking on the State field within the Map.

1.19.6 Deleting an Unassigned Workflow

To delete an unassigned Service Request or Change Workflow:

1. Select Service>Workflow

The Workflows screen appears.

- 2. Select the checkbox to the left of the Workflow to be deleted
- 3. Click Delete

The checked Workflow is no longer visible.

NOTE: A Workflow that belongs to a Team cannot be deleted.

1.19.7 Deleting a Workflow State

It may be necessary to delete a system default State or a State that is no longer in use. Note that a State cannot be deleted if it has been assigned to a Request.

NOTE: It is recommended that any States listed in the table of States included on the Life Cycle tab that are not included in the Workflow or used by the system, be removed from the table as all States included here are listed in the States tab when Workflow Technician assignment is being configured. By removing unused States from the table, assigning Technicians to the relevant stages of the Workflow becomes an easier task.

To delete an unused State:

- 1. Select Service>Workflows
- 2. Click on the Workflow hyperlink
- 3. Move to the Lifecycle tab
- 4. Select the State name link in the table of States included in the Lifecycle tab.
- 5. Click Delete
- 6. Click Done.

1.20 Creating a Service or Change Request Team

Service and Change Request Teams are built around the selected Workflow. Technicians and Managers are assigned to work groups and each State of the Workflow Lifecycle is associated with a selected work group. When a request moves to a next State, it is assigned to a Technician or Manager within the work group associated with that Workflow State. One or multiple levels of escalation can also be configured for the Workflow, which span the lifecycle of the Workflow the Service or Change Team are assigned.

1.20.1 Creating a Service Request or Change Team

To create a Service Request or Change Management Support Team:

- 1. Select User>Teams
- 2. Click New
- 3. Enter the Team Name
- 4. Select the Service or Change Request Process
- 5. Enter the Team email address, if relevant

| Team Information | | | |
|-------------------------|----------------------------------------------------------------------------|----------|----------------------|
| Information | Service | | |
| | | | |
| Details | | Location | |
| Team Name | | Address | |
| Process | Incident | City | |

- 6. Define the Team options:
- 7.

| Options | Description |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Process | Indicates if the Team is to manage Change or Service Requests. |
| Team Lead | The Technician assigned to supervise the Team and its activities. Options are visible when the Technicians have been assigned to the Team. |
| Incoming Email | Enter a specific Email Address for the Team, which allows Customers to use directly. This address will need to be configured as an alias to the system support address on the Email Server. See: Email Polling & Request Creation. |
| Email Display Name | If desired, enter a name for the Team that will be used in the From address for email responses sent by members of the Team. |

| Options | Description | |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Customer Notification | Sets the default notification method applied to requests for Customer correspondence, when requests are assigned to this Team. | |
| | The Customer Defined option, derives the method of notification from the setting within the Customer's Profile or Account Information tab. | |
| Technician Notification | Sets the default notification method applied to requests for Technician correspondence, when requests are assigned to this Team. | |
| Self Assign | When enabled, Requests created by a Technician will automatically be assigned to that Technician. | |
| Notify on New | Determines who is informed about the creation of a new Request. | |
| | <i>Technician</i> - notifies only the Technician assigned to the request. (This is the default setting.) | |
| | <i>Layer</i> - notifies all members in Layer One of the Team assigned to the request. | |
| | Select Team - notifies all members of the Team. | |
| Notify on Update | Determines who is informed when a Request is updated. | |
| | <i>Technician</i> - notifies only the Technician assigned to the request. (This is the default setting.) | |
| | <i>Layer</i> - notifies all members in Layer One of the Team assigned to the request. | |
| | Select Team - notifies all members of the Team. | |
| Notify on Escalate | Determines who is informed when a Request is escalated. | |
| | <i>Technician</i> - notifies only the Technician assigned to the request. (This is the default setting.) | |
| | <i>Layer</i> - notifies all members in Layer One of the Team assigned to the request. | |
| | Select Team - notifies all members of the Team. | |

| Options | Description | | |
|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Request Queue (Service Request Teams only) | Allows the Team to use a holding bay for Requests that are received via email or the Customer Portal. (This option is visible if it has been enabled by the Administrator.) | | |
| | If the Team has only one Technician assigned to the work group associated with the Workflow Default Entry State, new Requests are automatically assigned to that Technician and that Technician is notified of the new Request assignment. | | |
| | If the Team has multiple Technicians assigned to the work group associated with the Workflow Default Entry State, the new Request is placed in the Queue (i.e., it is assigned to the System User) and all members of the Team are notified that a new Request has been assigned to the Request Queue. See: Queues. | | |
| Queue Visibility (Service Request Teams only) | When the Request Queue is enabled, the option can be refined to allow the Queue to be available for assigned Workflow entry points, or all stages of the assigned Workflow. If All States is enabled Users can move Requests back to the Queue throughout the Request lifecycle. See:Queues. | | |
| Edit Assign (Service Request Teams only) | When set to Yes and a request assigned to the System User (i.e., Queue) is opened in Edit Mode, the system will automatically assign the request to the User editing the request if they are in the Escalation Layer associated with the request. | | |
| Close Assign | When set to Yes and a request assigned to the | | |
| (Service Request Teams only) | System User (i.e., Queue) is moved to an Exit State of the Workflow, the system will automatically assign the request to the User who prompted the close action. | | |
| Strong Authentication | If the Manager User Name and Password is required to be re-entered during the processing of a Request in an Approval State, set this option to Yes. | | |

- 8. Complete the Team Location details, if required
- 9. Select Technicians from the Available Technicians list

Highlight Technician names within the Available Technicians list and click the arrow icon to move the Users to the Selected Technicians list.

10. Select Managers from the Available Managers list

This is required if a Manager is to be assigned to a Workflow Approval State.

Highlight Manager names within the Available Managers list and click the arrow icon to move the Users to the Selected Manager list.

11. Click Next

The Service Screen displays all Available OLAs and Workflows

| Team Information | | | | | |
|------------------|------------------------------------------------------------------------------------|---|---|-------------------------|------------|
| Information | Service Grou | p | | States Laye | ers |
| | | | | Change Manage | ement Team |
| Agreements | | | | | |
| OLAs | Available OLAs | | | Selected OL | As |
| | No OLAs available | | | None select | ed |
| Workflows | | | | | |

| | Change Deployment Workflow Emergency Change Workflow Typical Change Workflow | * | 0 | Standard Change Workflo | • W |
| Default Workflow | Standard Change Workflow | • | | | |
| | | | | Cancel | Save |

12. Assign the relevant OLAs within Available OLAs list (Optional)

Highlight the OLA and click the arrow icon to move an OLA to Selected OLAs list. Assigning an OLA to the Team ensures the Team's details will be selectable when the assigned OLA is associated with a Workflow State.

13. Assign the relevant Workflows within the Available Workflow list

Highlight the Workflow and click the arrow icon to move the Workflow into the Selected Workflows list. Assigning Workflows to the Team ensures the Team is displayed as an option within the Request Summary tab when the associated Workflows are assigned to a Request.

14. Select a Default Workflow from the drop-down list

This is relevant if more than one Workflow is assigned to the Change Team. The Default Workflow is automatically applied to an RFC that has been allocated to this Change Team.

15. Select Next

The Group tab displays the Default Technician Group and Default Manager Group. Within this tab multiple groups of Technicians and Managers can be created that are then associated with the relevant stages of the Workflow.

16. Click on the Default Group link

The Team Lead will automatically be applied to the Group. Rename the Work Group, if relevant. Highlight Technician names within the Available Technicians list and

click the arrow to allocate the Technician to the Selected Technicians field.

| | | | Cancel | Save |

- 22. Select the relevant Group from the drop-down list
- 23. Select Save

Repeat the Work Group assignment for each State, where relevant.

24. Click Next

The Layers tab is displayed, where one or more overarching layers of escalation can be applied to the Workflow.

- 25. Click on the Layer link to assign the relevant Users to the escalation layer and save
- 26. Click Save and Done.

To remove a User from a Team:

1. In the User tab, click Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. Select the Team tab
- 4. Click on Edit.

The Remove button is visible.

1.20.2 Manager Approval State assignment

For a Manager User to be allocated the privilege of approving a Change or Service Request they must be assigned to a Change or Service Request Team and an Approval State of the relevant Change or Service Request Workflow. Change Workflows must include Approval States (i.e., States where activities are accepted or rejected) before the option to assign a Manager to a Change Team becomes available. See: Service or Change Request Workflows for more information.

To assign a Manager to a Workflow Approval State:

- 1. Go to User > Teams
- 2. Select a Service or Change Request Team

| Information | Service Group | States | Layers |
|-------------------------|--------------------------------------------------|----------|----------------------------------------|
| Duplicate | | | Change Management Team |
| Details | | Location | |
| Team Name | Change Management Team | Address | |

| | | | |

5. Select a Workflow

The Default Manager Group, which may have been re-named, is automatically assigned to all Approval States of the selected Workflow.

- 6. To adjust the assigned Manager Group, select the Approval Workflow State link
- 7. Select the Manager Group from the drop-down list and save
- 8. Click Save and Done.

1.20.3 Layers Tab

Requests moving through Service or Change Request Workflows can be escalated to the Team Lead or Supervisor User at any stage of the Workflow that is configured as a Manager Approval State. This action can be achieved by using the Escalate button within the Summary tab of the Request.

By default escalation layers are created with the Team Lead assigned. To amend or add to the assignment:

- 1. Go to User > Teams
- 2. Select a Service or Change Request Team
- 3. Click Edit
- 4. Select the Layers tab
- 5. Click on the Layer hyperlink

| Team Information | | | | | |
|------------------|--------------|-------------|--------|------------------|--------------|
| Information | Service | Group | States | Layers | |
| | | | | Change Man | agement Team |
| Layer Name | Layer 2 | | | | |
| Technicians | Available Te | chnicians | | Selected Technic | ians |
| | Sankar R | А 7 7 | 0 | Ingo Engels | А |
| | | | Delete | Cancel | Save |

- 6. Amend the assignment, as required
- 7. Click Save

If additional escalation layers are required, select New and repeat steps 5 to 7.

8. Click Done when all required escalation layers are configured.

1.21 KBA Content Approval

When the Control KBA via Request option is enabled in the Setup>Privileges>Request tab, Knowledge Base content with a Pending Publication status automatically generates a Request that requires approval by Users with publishing privileges, before the content is accessible in the Knowledge Base.

When the User has completed the content and the Article is ready for publication and moved to the Article Status of Pending Publication, a Request is automatically created. When the KBA is assigned the Pending Publication state, the content of the Article can no longer be edited.

Published KBA content that is edited, also results in generating a Request for approval but the Article retains its published state and displays the pre-edited content. Upon approval of the new content, the Article is updated.

1.21.1 Creating KBA Approval Requests

New KB content is initially saved with a status of In Development. When this content is ready to be published and if the Control KBA via Request is enabled, the following steps should be followed:

- 1. Go to the Knowledge > Articles tab
- 2. Select the Article No. link
- 3. Click Edit
- 4. Move the Status to Pending Publication

| Visibility | Everyone | |
|---------------|---------------------------------------|--|
| Status | In Development | |
| Item Category | In Development Pending Publication | |

5. Click Save

The Request Number that was generated is displayed and the KBA moves can no longer be edited.

| Information |
|-------------------------------------------|
| Service Request #100020 has been created. |
| |

6. Click Done.

1.21.2 Managing KBA Approval Requests

KBA Approval Requests are found within the Request or Change tab, as defined in the Control KBA via Request customization. To approve new content within the relevant tab:

1. Select the Request # hyperlink

| Customer | Analysis | Summary | | | | | |
|-------------------|------------------------------------------------|---------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|------------|-----------|--------------|---------------|

| View KBA | #140 | |

- 6. Click Save
- 7. Click Edit

The Accept, Revise and Reject buttons are displayed.

| Pending KBA | | | | |
|-------------|----|---|--------|--|
| View KBA | #2 | | | |
| Operations | 2 | X | Revise | |

| Status | Description |
|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2 | When selected the new content is approved for publication and the Request is moved to the Accept State. |
| | An Alert is sent to the KBA author informing them of the successful publication. |
| - | When selected, the Request Summary screen displays the Notes field to allow the User to add comments and the Request is moved to the "On Hold - KBA Revise" State. The KBA is returned to the "In Development" State. |
| | The KBA author is sent an Alert, notifying them that the KBA requires revision. When the edits have been made and the KBA is returned to the "Pending Publication" Status, the Request is re-activated and set to the Approval State. |
| 2 | This option is to be selected when it is decided that the KBA Content is not suitable for the KB. |
| | The Request moves to the configured Reject State and a Notes field is displayed allowing the User to record the reason for the decision. The KBA returns to the" In Development" State, which allows the author to delete the KBA, if desired. |
| | The KBA author is sent an Alert, notifying them that the content has been rejected. |

8. Select the appropriate Operations button

A warning message is displayed, select OK. The system will move the Request to the appropriate State defined in the Workflow.

9. Add Note Content, if relevant

Select Add Note button to save Note Content.

10. Click Done.

An alert is sent to the author of the KBA Article, notifying them if their KBA has been approved, rejected or requires revision. The Alert includes links to the related Article and Request.

NOTE: If a KBA Approval Request is deleted, the associated content reverts to the In Development status and the relationship between the Request and KBA is removed.

If a KBA is deleted when the associated Request is in the On Hold - KBA Rework system state, the Request moves to the Default Closed State for the assigned Workflow and the relationship between the two elements is deleted.

1.22 Teams

Technicians are allocated to Teams for the various support processes. For each Process (i.e., Incident, Problem, Change and Service Request) there must be at least one support Team.

Default Teams are assigned to specific Item Types. Support requests generated against an Item Type are then assigned to a Technician within the default support Team for that Process. The Team may be reassigned based on other options provided through the associated SLA(s) and Workflow(s).

Support Teams for Incident and Problem Management include escalation layers, and Technicians are assigned to each of these layers. Incidents and Problems follow the escalation path determined by the service level triggers assigned to the request. For a Technician to be able to edit a request, they must be a member of the assigned Team, although they do not need to be included in an escalation layer.

Service and Change Request Teams are built around the selected Workflow. Technicians are assigned to work groups and each State of the Workflow Lifecycle is associated with a selected work group. When a request moves to a next State, it is assigned to a Technician within the work group associated with that Workflow State. One or multiple levels of escalation can also be configured for the Workflow, which span the lifecycle of the Workflow the Service or Change Team are assigned.

A Service Portfolio Team can be configured in the system, assigning the Users who will manage the development, production and discontinuation of services offered to the organization.

Use this section to:

- Create new Incident and Problem Teams with escalation layers
- · Create Service and Change Request Teams with workflow assignments
- Create a Service Portfolio Team
- Create a Release and Deployment Team

1.22.1 Unknown Team

By default the system includes the system Team, Unknown, within the Teams List. This is the Team used by the application for Incidents created via email. It can be configured to use the system email address or an email account that is an alias for the main system account and Technicians can be assigned like any other Incident Team.

NOTE: The Unknown Team should *NOT* be re-named and will *NOT* appear in any other Teams lists throughout the application, i.e., when assigning a Team to an Item or Item Type.

1.22.2 Creating an Incident or Problem Team

To create an Incident or Problem Team:

- 1. Select User>Teams
- 2. Click New
- 3. Enter the Team Name

| Team Information | | | |
|-------------------------|--------------------------------------------------------------------------|----------|----------------------|
| Information | Service | | |
| | | | |
| Details | | Location | |
| Team Name | | Address | |
| Process | Incident | City | |

- 4. Select Incident or Problem Process
- 5. Enter the Team email address, if relevant
- 6. Define the Team options
- 7.

| Options | Description |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Team | Enter the Team Name. (Required.) |
| Process | Indicates if the Team is to manage Incidents or Problems. |
| Team Lead | The Technician assigned to supervise the Team and its activities. Options are visible when the Technicians have been assigned to the Team. |
| Incoming Email | Enter a specific Email Address for the Team, which allows Customers to use directly. This address will need to be configured as an alias to the system support address on the Email Server. See: Email Polling & Request Creation. |
| Email Display Name | If desired, enter a name for the Team that will be used in the From address for email responses sent by members of the Team. |

| Options | Description |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| Customer Notification | Sets the default notification method applied to requests for Customer correspondence, when requests are assigned to this Team. |
| | The Customer Defined option, derives the method of notification from the setting within the Customer's Profile or Account Information tab. |
| Technician Notification | Sets the default notification method applied to requests for Technician correspondence, when requests are assigned to this Team. |
| Live Priority | Routes requests to Technicians who belong to the Team and logged into the system. |
| Self Assign | When enabled, requests created by a Technician will automatically be assigned to that Technician. |
| Notify on New | Determines who is informed about the creation of a new request. |
| | <i>Technician</i> - notifies only the Technician assigned to the request.(This is the default setting.) |
| | <i>Layer</i> - notifies all members in Layer One of the Team assigned to the request. |
| | Select Team - notifies all members of the Team. |
| Notify on Update | Determines who is informed when a request is updated. |
| | <i>Technician</i> - notifies only the Technician assigned to the request.(This is the default setting.) |
| | <i>Layer</i> - notifies all members in Layer One of the Team assigned to the request. |
| | Select Team - notifies all members of the Team. |
| Notify on Escalate | Determines who is informed when a request is escalated. |
| | <i>Technician</i> - notifies only the Technician assigned to the request.(This is the default setting.) |
| | <i>Layer</i> - notifies all members in Layer One of the Team assigned to the request. |
| | Select Team - notifies all members of the Team. |

| Options | Description | |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Incident/Problem Queue | Description Allows the Team to use a holding bay for Incidents/ Problems that are received via email or the Customer Portal. (This option is visible if it has been enabled by the Administrator.) If the Team has only one Technician assigned to Layer One of Escalation, new Incidents are automatically assigned to that Technician and that Technician is notified of the new Incident assignment. If the Team has multiple Technicians assigned to Layer One of Escalation, the new Incident is placed in the Queue (i.e., it is assigned to the System User) and all members of the Team are notified that a new Incident has been assigned to the Incident Queue. See: Queues. | |
| | Layer One of Escalation, new Incidents are automatically assigned to that Technician and that Technician is notified of the new Incident | |
| | Layer One of Escalation, the new Incident is placed in the Queue (i.e., it is assigned to the System User) and all members of the Team are notified that a new Incident has been assigned to the Incident Queue. | |
| Queue Visibility | When the Incident Queue is enabled, the option can be refined to allow the Queue to be available for assigned Workflow entry points, or all stages of the assigned Workflow. If All States is enabled, Users can move requests back to the Queue throughout the request lifecycle. See: Queues. | |
| Edit Assign | When set to Yes and a request assigned to the System User (i.e., Queue) is opened in Edit Mode, the system will automatically assign the request to the User editing the request if they are in the Escalation Layer associated with the request. | |
| Close Assign | When set to Yes and a request assigned to the System User (i.e., Queue) is moved to an Exit State of the Workflow, the system will automatically assign the request to the User who prompted the close action. | |

- 8. Complete the Team Location details, if required
- 9. Select Technicians from the Available Technicians list

Highlight Technician names within the Available Technicians list and click the arrow icon to move the Users to the Selected Technicians list.

10. Click Next

The Service Screen displays all Available OLAs and Workflows

| Team Information | | | |
|------------------|---------------------|---|--------------------|
| Information | Service Layers | | |
| Agreements | | | |
| OLAs | Available OLAs | | Selected OLAs |
| | No OLAs available | | None selected |
| Workflows | | | |
| Workflows | Available Workflows | | Selected Workflows |
| | Incident Workflow | 0 | None selected |
| Default Workflow | • | | |
| | | | Cancel Next |

11. Assign the relevant OLAs within Available OLAs list (Optional)

Highlight the Team Name and click the arrow icon to move an OLA to Selected OLAs list. Assigning an OLA to the Team ensures the Team's details will be selectable when the assigned OLA is associated with a Workflow State.

12. Assign the relevant Workflows within the Available Workflow list

Highlight the Workflow Name and click the arrow icon to move the Workflow into the Selected Workflows list. Assigning Workflows to the Team ensures the Team is displayed as an option within the request Summary tab when the associated Workflows are assigned to a request.

- 13. If more than one Workflow is assigned, select a Default Workflow form the drop-down list
- 14. Select Next

The Escalation screen appears. This allows Escalation Layers and Technician assignment to be configured.

- 15. To edit the Default Layer, select the link
- 16. Move Technicians between the Available and Selected boxes and amend the Layer Name, if required

| Team Information | | | | | |
|------------------|------------------|--------|----|-------------------|-------|

| | 2 | Default layer | Ingo Engels Craig Wilson | | |
| | | 1 - 2 of 2 Res | ults | | |
| | | | Cancel | New | Save |

- 20. To delete a Layer, select the Layer Name
- 21. Click the Delete button and Save.

1.22.3 Creating and Configuring Additional Escalation Layers

Additional escalation levels can be created, if required. The order of the escalation pathway is determined by the order of creation. That is, layer one is entry level support, layer two is the next level of support and so on.

- 1. Select Team Information>Layers
- 2. Click Edit to display the New button

The Technicians who are assigned to the Team are displayed in the Available Technicians list

- 3. Add and/or remove Technicians from the Escalation Layer Members list
- 4. Click Save.

1.22.4 Editing an Escalation Layer

To edit an Escalation Layer with the Team Information screen in Edit mode:

- 1. Select the Layers tab
- 2. Click on the Layer name hyperlink

The list of available and assigned Technicians is displayed.

3. Remove and add Technicians, as required

Highlight the User Names within the relevant list and click the arrow to move the User to the required list.

| Team Information | | | |
|------------------|-----------------------|---|------------------------------------------------|
| Information | Service Layers | | |
| | | | TeamSMG |
| Layer Name | Default layer | | Click to swap users |
| Technicians | Available Technicians | | between Technicians lists Selected Technicians |
| | Ingo Engels | * | Craig Wilson |
| | | | Delete Cancel Save |

4. Select Save.

1.22.5 Configuration of Escalation Layers

The following process is recommended for configuring Escalation Layers. Level one should contain the majority of Available Technicians who have been assigned to the Team. A smaller but more experienced group should be assigned to the second level. An even smaller and more experienced group should be assigned to the third level and so on until the final level of escalation. Ideally, the last layer should contain only the Team's Lead Technician.

There are no constraints to prevent individual Technicians from being assigned to more than one level. However, for a Technician to be able to edit a request they must be a member of the assigned Team, although they do not need to be included in an escalation layer.

To remove a User from a Team:

1. In the User tab, click Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. Select the Team tab
- 4. Click on Edit

The Remove button is displayed.

- 5. Select the checkbox to the left of the Team Name Multiple check boxes can be selected.
- 6. Select Remove to delete the User from a Team The User Name is removed from the Team.
- 7. Click Done.

1.23 Service Portfolio Team

The Service Portfolio Team is responsible for overseeing the creation and publication of all service offerings in the Service Portfolio, which include:

• Services under development

- Services in production and operation, stored in the Service Catalog
- Retired and discontinued services.

1.23.1 Working with Service Portfolio Teams

To maintain control of the creation, editing and deletion of Service Items within the CMDB, Service Portfolio Teams can be assigned to Service Category templates. Included within these Teams are Groups of Users who are responsible for managing Item information at the various stages of the Service Lifecycle.

| Category | |
|---------------------|------------------|
| Name | Peripherals |
| | Service Category |
| Description | |
| Item No. Validation | 🔍 Yes 🔍 No |
| Icon | |
| | 22 |

When Service Portfolio Teams are configured within the application, the option to assign a Service Portfolio Team is displayed within Service Category templates in the Configuration>Categories tab. This allows for the Groups that are created within the Team, to be assigned to the different Category Lifecycle States included in the Lifecycle Map displayed in the Item Categories>Life Cycle tab.

| Service Team | | | |
|--------------|------------|---|--|
| Group | Operations | ÷ | |

Assigning Groups to Category Lifecycle States allows the Users within the Group to edit the details of an Item when it is assigned that stage of the Category Lifecycle.

NOTE: When creating the Teams, it is suggested that the Group names reflect the stage of the Service Lifecycle, for instance Service Design, Service Implementation, Service Operation, Service Quality Control and Catalog Management.

1.23.2 Creating a Service Portfolio Team

To create a Service Portfolio Team:

- 1. Select User>Teams
- 2. Click New
- 3. Enter the Team Name
- 4. Select the Service Portfolio Process

| Team Information | | | |
|-------------------------|----------------------------------------------------------------------------|----------|----------------------|

- 5. Complete the Team Location details, if required
- 6. Select Technicians from the Available Technicians list

Highlight Technician names within the Available Technicians list and click the arrow icon to move the Users to the Selected Technicians list.

- 7. Set the Team Lead
- 8. Click Next

The Service Screen moves to the Group tab where the Users are assigned the various Groups that are provided the privilege of managing Item information and lifecyle status as part of managing the Service Portfolio. Some suggested Groups include Service Design, Service Implementation, Service Operation, Service Quality Control and Catalog Management.

| Team Information | | | |

- 11. Select Save
- 12. Click New, to add other Groups to the Team Assign Users as required and Save.
- 13. Click Done.

1.23.3 Removing Team Members from a Group

To remove a User from a Group, with the Team Information screen in Edit mode:

1. Click on the Group Name hyperlink

The lists of Available and Selected Technicians are displayed.

- 2. Remove and add Technicians, as required
- 3. Select Save.

1.23.4 Removing a User from a Team

To remove a User from a Team:

1. In the User tab, click Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. Select the Team tab
- 4. Click on Edit

The Remove button is displayed.

- 5. Select the checkbox to the left of the Team
- 6. Click Remove.

If the User is not the only person assigned to an escalation layer of the selected Team, the User will be successfully removed from the Team.

1.24 Release & Deployment Team

The Release & Deployment Team is responsible for the planning, scheduling and controlling of changes and updates from Test to Live environments.

Release Managers, as part of a Release Team, direct the process using all information presented to help assess release readiness, and to efficiently identify deployment targets for the deployment phases of a release. This level of control guarantees the Release Manager can deliver updates to the live environment successfully, to all relevant parties, on time.

The Deployment component of the Release Team covers the activities or tasks responsible for moving new or changed hardware, software, documentation and process to the Live Environment.

1.24.1 Working with Release Management Teams

To plan, schedule and control changes and updates from Test to Live environments, Release Management Teams are assigned to Releases within the Change>Releases tab. Included within these Teams are Groups of Users who are responsible for managing the various stages of the Release Lifecycle.

| Details | |
|----------|-----|
| Name | |
| Priority | Low |
| Team | • |
| Group | |
| Workflow | • |

When Release Teams are configured within the application, Technicians with the Release and/or Deployment Process are associated with the Team. Managers with the Release Process are assigned to the Approval States of the Release Workflow. Technicians assigned the Release Process can be assigned to States of the Release Workflow, while Technicians only assigned the Deployment Process are placed in the Deployment Group and are responsible for completing the Deployment Tasks created for a Release.

1.24.2 Creating a Release & Deployment Team

To create a Release and Deployment Team:

- 1. Select User>Teams
- 2. Click New
- 3. Enter the Team Name
- 4. Select the Release Process

| Team Information | | | | |
|-------------------------|-----------------------------------------------------------------------------|--------|----------|----------------------|
| Information | Service | | | |
| | | | | |
| Details | | | Location | |
| Team Name | Release Team | | Address | |
| Process | Incident | • | City | |
| Team Lead | Service Request Incident | | State | |
| Incoming Email | Problem Change Request | | Zip | |
| Email Display Name | Release Service Portfolio | | Country | • |
| Customer Notification | Email | • | Phone | |
| Technician Notification | Email | • | | |
| Live Priority | ◯ On | | | |
| Self Assign | © On . ● Off | | | |

| Members | | | | |
| Technicians | Available Technicia | ans | | Selected Technicians |
| | Craig Wilson Ingo Engels Joe K Kamal K Sankar R Vaibhav Jain | A 7 | 0 | None selected |
| | | | | Cancel Next |

- 5. Complete the Team Location details, if required
- 6. Select Technicians from the Available Technicians list

The Technician List consists of Users assigned the Release and/or Deployment Process in their User Information screen.

Highlight Technician names within the Available Technicians list and click the arrow icon to move the Users to the Selected Technicians list.

NOTE: Technicians with the Release Process will be available for assignment within the Release Workflow States in the Team Information>States tab

Technicians only assigned the Deployment Process will be available for assignment to the Deployment Group, who will complete the Deployment Tasks generated as part of the Release.

1. Set the Team Lead

The Team Lead options are drawn from the Assigned Technicians who are assigned the Release Process.

2. Select Managers from the Available Managers list

The Manager List consists of Users assigned the Release Process in their User Information screen.

Highlight Manager names within the Available Managers list and click the arrow icon to move the Users to the Selected Managers list.

3. Click Next

The Information screen moves to the Service tab where the Release Workflows are associated with the Team.

| Team Information | | |
|------------------|------------------------|--------------------|
| Information | Service Group | States |
| Workflows | | |
| Workflows | Available Workflows | Selected Workflows |
| | | Release Workflow |
| | No Workflows available | |
| | | - |
| | | |
| Default Workflow | Release Workflow | |
| | | |
| | | Cancel Next |

- 4. Move the relevant Available Workflows to the Selected Workflows field
- 5. Set the Default Workflow

If a single Workflow is assigned to the Team it is automatically applied as the Default Workflow.

Assigning Workflows to the Team ensures the Team is displayed as an option within the Deployment Summary tab when the associated Workflows are assigned to a Task.

6. Click Next

The screen defaults to the Groups tab that lists the default deployment, manager and release Groups. The Groups automatically apply the Team Lead to the Groups and require additional Technician and User assignments.

7. Select the Default Deploy Group

The Group Name can be edited and the Available Technicians and Selected Technicians fields are now accessible. As a Deployment Group Type, this group of Users will be available for assignment for Deployment Tasks created as part of a Release Workflow.

- 8. Rename the Group, if relevant
- 9. Move the relevant Users between the Available and Selected boxes

The Users displayed in the Available Technicians list have been assigned the Deployment Process in their User Information screen.

| Team Information | | | | | |

| | Plan Approval | Default Manager Group | |
| | Rejected | Default Release Group | |
| | Rework | Default Release Group | |
| | Test | Default Release Group | |
| | | 1 - 9 of 9 Results | |
| | | | Cancel Save |

- 16. Click Save and continue to adjust all the relevant assignments
- 17. Click Save
- 18. Click Done.

The Release & Deployment Team is fully configured.

1.24.3 Removing Team Members from a Group

To remove a User from a State or Group, with the tab in Edit mode:

- 1. Click on the State or Group Name hyperlink to display the list of available and assigned Technicians
- 2. Remove and add Technicians, as required
- 3. Select Save.

1.24.4 Removing a User from a Team

To remove a User from a Team:

1. In the User tab, click Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. Select the Team tab
- 4. Click on Edit

The Remove button is displayed.

- 5. Select the checkbox to the left of the Team
- 6. Click Remove.

If the User is not the only person assigned to an escalation layer of the selected Team, the User will be successfully removed from the Team.

1.25 Queues for requests

The Queues functionality allows for requests, Incidents, Service Requests or Problems, to be assigned to the System User as part of a Team holding bay. Users within the Team with the Queue option enabled can select relevant requests they decide to work on, or manually assign the System User assigned requests to an appropriate User.

Requests that are assigned to the Queue are allocated to the System User, until they are manually reassigned to a specific User. The unassigned requests are located within the Home tab My Teams Queued Tasks, or the Operations>Incidents tab Filter option called Incident Queue for new Incidents, the Service Requests within the Service Request Queue in the Operations>Service Requests tab and the Operations>Problems tab Filter option called Problem Queue for new Problems .

When the Queue feature is enabled for the application, it can be applied on a Team by Team basis. This means some Teams can be configured to use the business logic of the application for assigning requests to specific Users. While other Teams can use the Queue to select the requests they want to work on, or allows other Users to manually assign the request to a relevant User.

When the Self Assign and Queue options are enabled for a Team and a request is created by a Technician User, the Self Assign option will override the Queue assignment and allocate the request to the User creating the request, if they are in the first layer of escalation. The User can assign the request to the Queue by selecting the System User in the Technician list.

| Escalation | ◉ On © Off | | |
|------------------|----------------|--|--|
| Escalation Layer | (Layer 1 of 1) | | |
| Technician | Jill Brown | | |
| | Jill Brown | | |
| | System User | | |

1.25.1 Enabling the Queue

By default, the Queue functionality is disabled in the application Setup. To enable the Queue:

- 1. Log in as an Administrator
- 2. Select Setup>Privileges
- 3. Select the Request tab

| Privileges | |
|-------------------------------|-----------------|
| User Customer | Requests System |
| Requests | |
| Enable Escalation Control Yes | No |
| Queues On | Off |

- 4. Enable the Queues option
- 5. Click Save.

To enable the Queue for a Team:

- 1. Log in as a Supervisor
- 2. Select the User>Teams option
- 3. Select the relevant Team link

| Team Information | | | |
|-------------------------|-------------------------------------------------------------|----------|----------------------|
| Information | Service Layers | | |
| Duplicate | | | BYOD-Incident-Team |
| Details | | Location | |
| Team Name | BYOD-Incident-Team | Address | |
| Process | Incident | City | |
| Team Lead | Joe K | State | |
| Incoming Email | | Zip | |
| Email Display Name | | Country | • |
| Customer Notification | Email | Phone | |
| Technician Notification | | | |
| Live Priority | | | |
| | ○ On ● Off | | |
| | Technician Layer Team | | |
| | Technician Layer Team | | |
| | Technician Layer Team | | |
| | | | |
| | Entry States All States | | |
| | Ves No | | |
| _ | Yes No | | |
| Members | | | |
| Technicians | Available Technicians | | Selected Technicians |
| | Craig Wilson Kamal K Sankar R Vaibhav Jain | 0 | Ingo Engels Joe K |
| | | Delete | Cancel Save |

- 4. Click Edit
- 5. Enable the Queue option

The following options can then be applied to the Queue:

| • | |
|---|--|

| Options | Description |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Service Request /Incident/Problem Queue | Allows the Team to use a holding bay for Incidents that are received via email or the Customer Portal. (This option is visible if it has been enabled by the Administrator.) |
| | If the Team has only one Technician assigned to Layer One of Escalation, new Incidents are automatically assigned to that Technician and that Technician is notified of the new Incident assignment. |
| | If the Team has multiple Technicians assigned to Layer One of Escalation, the new Incident is placed in the Queue (i.e., it is assigned to the System User) and all members of the Team are notified that a new Incident has been assigned to the Incident Queue. See: Queues. |
| Queue Visibility | When the Incident Queue is enabled, the option can be refined to allow the Queue to be available for assigned Workflow entry points, or all stages of the assigned Workflow. If All States is enabled, Users can move requests back to the Queue throughout the request lifecycle. See: Queues. |
| Edit Assign | When set to Yes and a request assigned to the System User (i.e., Queue) is opened in Edit Mode, the system will automatically assign the request to the User editing the request if they are in the Escalation Layer associated with the request. |
| Close Assign | When set to Yes and a request assigned to the System User (i.e., Queue) is moved to an Exit State of the Workflow, the system will automatically assign the request to the User who prompted the close action. |

7. Set the Queue Visibility

Select All States if Team members are to be allowed to return a request to the Queue regardless of the assigned Workflow State.

8. Set the Edit Assign option

Select Yes, if a request that is assigned to the System User/Queue is to be automatically assigned to a User in the first layer of escalation who opens the request in Edit mode.

9. Set the Close Assign option

Select Yes, if a request that is assigned to the System User/Queue is to be automatically assigned to the User who initiates an action that results in the request being moved to an Exit State.

10. Select Save.

1.25.2 Assigning requests from a Queue

All requests displayed within a Queue list are assigned to the System User. To reassign the request to an appropriate User:

- 1. Select the Request # hyperlink
- 2. Click Edit
- 3. Select an appropriate User from the Technician list

The request will now be assigned to the new User and removed from the Queue.

| Escalation | 🖲 On 🔘 Off | | |
|------------------|---------------------|----|--------|
| Escalation Layer | (Layer 1 of 1) | | |
| Technician | Kamal K | ſ, | \sim |
| Subject | Kamal K Sankar R | | |

4. Click Save.

1.25.3 Reassign a request to the Queue

When the All States option has been enabled for the Queue within the Team Information screen, the System User will be retained in the Technician drop-down list for the first layer of escalation after it has been assigned to a User. This allows the assigned User to re-assign the request back to the Queue.

To reassign the request to the Queue/System User:

1. Select the Request # hyperlink

The request should be at layer one of escalation within the assigned Team.

- 2. Click Edit
- 3. Select System User within the Technician drop-down list

The request will now be assigned to the System User and returned to the Queue.

| Escalation | On Off | |
|------------------|---------------------|-----|
| Escalation Layer | (Layer 1 of 1) | |
| Technician | | S 8 |
| Subject | Kamal K Sankar R | |

- 4. Click Save
- 5. Click Done.

The system returns to the request list view.

1.25.4 Queue Filter

Teams that use the Queue method for request assignment can view and allocate requests using the My Teams Queued Tasks within the Home tab list filter, or within the Service Request, Incidents or Problems tab Queue list filter. They can also see Queued Tasks within the My Teams Tasks filters.

To view all types of requests assigned to the Queue within one list, use the My Teams Queued Tasks within the Home tab:

- 1. Select the Home tab
- 2. Go to the Filter List
- 3. Select the My Teams Queued Tasks option from the drop down list.

The screen will list all of the Service Requests, Incidents and Problems that are currently assigned to the System User.

To view the Queue within the Service Requests tab:

- 1. Select the Operations>Service Requests tab
- 2. Go to the Filter List
- 3. Select the Service Request Queue option from the drop down list.

The screen will list all of the Service Requests that are currently assigned to the System User.

To view the Queue within the Incidents tab:

- 1. Select the Operations>Incidents tab
- 2. Go to the Filter List
- 3. Select the Incident Queue option from the drop down list.

The screen will list all of the Incidents that are currently assigned to the System User.

To view the Queue within the Problems tab:

- 1. Select the Operations>Problems tab
- 2. Go to the Filter List
- 3. Select the Problem Queue option from the drop down list.

The screen will list all of the Problems that are currently assigned to the System User.

1.26 Configuration Categories

Within the application the number of Item Categories that can be defined is unlimited. By default the following Categories are included:

Audio Visual

- Documentation
- Hardware
- Mobile Devices
- Network Infrastructure
- Peripherals
- Printers & Scanners
- Software
- Service.

Within each Category the Lifecycle and Classifications associated with the Category can be defined.

| Item Categories |
|--------------------------|
| New Delete Duplicate |
| ☑ Item Category ≜ |
| Audio Visual |
| BYOD Devices |
| Documentation |
| Hardware |
| Mobile Devices |
| Network Infrastructure |
| Peripherals |
| Printers & Scanners |
| Service |
| Software |
| 1 - 10 of 11 Results 🚽 🚽 |

1.26.1 Categories Tab

The default templates set at the Category level are used to cover a broad range of Item Types. Within each default Category the following have been configured, but can be customized as required:

- The Field Labels that will be available on the Details tab of Items using the Category
- The broadest level of Classifications that are assigned as part of the request creation process.
- The Lifecycle stages an Item will move through from being proposed or ordered to decommissioned
- Template responses that Technicians can use when entering a Note for a request that is assigned an Item that uses a Category.

The following table illustrates how Categories can be represented as Manufacturer Models within the Configuration>Types tab:

| Category | Proposed Item Type | |
|---------------------------|---------------------------------------------------------------------------|--|
| Hardware | PCs, Servers, Notebooks | |
| Networking Infrastructure | Routers/Switches, UPS, Cabinets, Racks | |
| Mobile Devices | iPhones, PDAs, Windows MDs | |
| Peripherals | Monitors, External Storage Devices, Docking Stations, Barcode Scanners | |
| Audio Visual | Projectors, Electronic Whiteboards | |
| Printers/Scanners | Printer, Scanner | |
| Digital Cameras | Digital Still, Digital Video, Thermal Image | |
| Software | Operating Systems, Databases, Applications | |
| Service | Email, Website. | |

The easiest way to create additional Categories, is to duplicate a default Category and tailor it to the organizational requirements.

A Service Portfolio Team can be assigned to the default Service Category by creating the Team within the User>Teams screen, then selecting Edit within the Categories tab of the Service Item Category.

NOTE: The **Reconcile Based On** option is available only for the hardware category. You can select any unique field as the reconciliation field so that the configuration management system ensures and maintains it as a unique hardware item.

Creating a Category

1. Select Configuration>Categories

The Item Categories screen appears.

2. Click New

| Item Categories | |
|---------------------|-------------------|
| Category | |
| Category | |
| Name | New Category |
| Description | Service Category |
| | h. |
| Item No. Validation | Ves 💿 No |
| Fields | |
| | Generated on Save |
| | Cancel Save |

- 3. Enter the name of the new Category
- 4. Complete the Description

Content entered in this field is visible when the User scrolls over the Category Name in the Item Category list.

5. Click Save

The Item Categories screen expands to display the options to upload an Item Category icon and customize Field labels.

NOTE: The Item No. Validation option is displayed, if the Admin>Setup>Privileges>System> Edit Item Numbers is set to Yes

This displays the Input Mask and User Mask fields, which are explained in the Categories Fields table below.

1. Check the Service Category field if the template is to be used for a Service Item

Ticking this option displays the Portfolio Team drop-down list, if Service Portfolio Teams have been created within the application. This allows Groups within the Service Portfolio Teams to be assigned to the different stages of the Item Lifecycle, and activates Service Catalog Management functionality within the Cost Tabs of Types and Items that use the template.

NOTE: Customers cannot create Items using Item Categories that have the Service Category option enabled

| Item Categories | | | | |
|---------------------|-------------------------|---------------------|--------------|-----------------|
| Category | Lifecycle Classi | fications Responses | 5 Types | |
| Duplicate | | | | sample category |
| Category | | | | |
| Name | sample category | | | |
| | Service Category | | | |
| Description | new sample category | | | |
| Item No. Validation | O Yes 🔍 No | | | |
| lcon | ? | | | |
| Fields | | | | |
| Ordering | Alphabetical O System (| User Defined | | Actions: 🤡 😫 |
| | 🖾 Label | Data Type | Field Style | Active Required |
| | Field 1 | String | field1 Text | 0 |
| | Field 10 | String | field10 Text | 2 |

1. Select the icon to be replaced, to change the Icon image for the Item Category

This icon is used as the generic visual representation of the Item Category in the Relationship Map. This can also be refined at the Item Type level.

| Browse No file selected. | Description | Upload Cancel |
|--------------------------------|-------------|-------------------------------------|
| | | |
| Use the Upload to upload a new | image or | Cancel to cancel the upload. |

NOTE: The dimensions of the uploaded icon must be exactly 128 x 128 pixels

2. Customize the Field Labels

Custom fields are visible in the Details tab of Items that use the Category.

Click the Field Label link to open it in Edit mode and display the following options:

| Categories Fields | Description | | |
|-------------------|----------------------------------------------------------------------------------------------------|--|--|
| Category | | | |
| Field Label | The name defines what attribute information is to be recorded in the field. | | |
| Active | Indicates if the field will be visible in the Details tab of an Item. | | |
| Required | Indicates if the field is required or mandatory field. | | |
| Customer Visible | Defines if the Customer can see the field within the | | |
| | Customer Portal. | | |
| | If Yes is selected, define if the Customer can edit the field information on the Customer Portal. | | |
| Data Type | Dictates the field's Data Type. The options availabl include : | | |
| | String - List or Free Text | | |
| | Number | | |
| | Boolean - radio buttons for Yes/No and True/ False | | |
| | Date - creates a date field | | |
| | Currency- creates a currency field | | |
| | Hyperlink. | | |
| Style | States the style of the field. | | |
| | eg. String- List or Free Text field. SeeLists for more information on creating a list field type. | | |
| Unique Value | When active, the system prevents the duplication of data within the customized field. | | |
| Default Value | Value entered is the default system entry for the field, when the field is not completed manually. | | |

| Categories Fields | Description |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Input Validation | When enabled the Input Mask and User Mask can be defined. |
| | <i>Input Mask</i> : A regular expression to use for data validation of values entered by a User (i.e., Zip/Post Code, telephone no.) |
| | <i>User Mask</i> : A "User Friendly" representation of the Input Mask that Customers can understand should it appear in a validation error message. |
| Enable Description | When enabled a Description field appears, allowing the User to enter details of what information is the field is expected to capture. These details are accessible next to the custom field on the relevant screen. |

4. Click Save to complete the field label configuration

Continue to customize all fields as required.

5. Define the ordering preference

The option defined here dictates how the fields appear on the Item Details tab.

To move a field, select the checkbox beside the field label followed by the 💽 🕑 to move the label up and down the list. To multi-select fields, tick the checkboxes beside the label name and click 🐼 to activate or 😢 to deactivate the fields.

The field order can be set to:

- Alphabetical the fields will be presented according to the alphabet order of the first letter.
- System the fields will appear in the order they are entered into the system.
- User Defined the fields can be manually adjusted by the User using the system buttons.
- 6. Click Save.

Modify the Category Lifecycle, Classifications, Responses and, if the system is synched with more than one asset management discovery tool the Federated templates, if necessary.

Duplicating a Category

To fast track the creation of an Item Category, each can be duplicated.

To duplicate an existing Category:

- 1. Select Configuration>Categories
- 2. Tick the box to the left of the Category name

| Item Categories | |
|------------------------|--------------------------|
| New Delete | Duplicate |
| Mailtern Category | <u>≜</u> |
| Audio Visual | |
| BYOD Devices | |
| Documentation | |
| Hardware | |
| Mobile Devices | |
| Network Infrastructure | |
| Peripherals | |
| Printers & Scanners | |
| Service | |
| Software | |
| | 1 - 10 of 11 Results 🚽 🔿 |

3. Click Duplicate

A new Category hyperlink is added to the Category list. The new Category will contain the same custom fields, lifecycle and classifications of the original Item Category.

| Item Categories | |
|----------------------|---|
| New Delete Duplicate | |
| Item Category | à |
| Audio Visual | |
| BYOD Devices | |
| BYOD DevicesCopy32 | |
| Documentation | |

4. Modify the new Category as required.

Editing and Configuring an Item Category Template

After an Item Category has been duplicated it can be modified to represent the new Item Category.

To edit a Category:

- 1. Select Configuration>Categories
- 2. Click on the appropriate hyperlink

The screen defaults to the Categories>Categories tab.

- 3. Click Edit
- 4. Enter the name of the new Category

5. Complete the Description

Content entered in this field is visible when the User scrolls over the Category Name in the Item Category list.

6. Click Save

The Item Categories screen expands to display the options to upload an Item Category icon and customize Field labels.

NOTE: The Item No. Validation option is displayed, if the Admin>Setup>Privileges>System> Edit Item Numbers is set to Yes. This displays the Input Mask and User Mask fields, which are explained in the Categories Fields table at Point 9.

1. Check the Service Category field if the template is to be used for a Service Item

Ticking this option, displays the Portfolio Team drop-down list, ifService Portfolio Teams have been created within the application. This allows Groups within the Service Portfolio Team to be assigned to the different stages of the Item Lifecycle, and activates Service Catalog Management functionality within the Cost Tabs of Types and Items that use the template.

NOTE: Customers cannot create Items using Item Categories that have the Service Category option enabled

3. Click Save to complete the field label configuration

Continue to customize all fields as required.

4. Define the ordering preference

The option defined here dictates how the fields appear on the Item Details tab.

To move a field, select the checkbox beside the field label followed by the 💽 🕑 to move the label up and down the list. To multi-select fields, tick the checkboxes beside the label name and click 🐼 to activate or 😢 to deactivate the fields.

The field order can be set to:

- Alphabetical the fields will be presented according to the alphabet order of the first letter.
- System the fields will appear in the order they are entered into the system.
- User Defined the fields can be manually adjusted by the User using the system buttons.
- 5. Click Save.

Modify the Category Lifecycle, Classifications, Responses and, if the system is synched with more than one asset management discovery tool, the Federated templates, if necessary.

1.27 Service Item Costs Tab

The Costs Tab of a Service Item includes information related to the financial and contractual details associated with the Item. The information more specifically related to the Service Item is recorded in the Charges and Revenue fields, as this information allows service and support organizations to calculate the costs of offering a service and if appropriate, recover the costs from the relevant parties.

As with other Item Types, the screen includes general Item details such as:

- Base cost
- Purchase date and related information
- Depreciation data
- SLA and Contract details.

The Information recorded on the Costs Tab includes:

| Financial | Description |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cost | The financial investment made to purchase the Item. This figure is also used when the Delegate Costs is enabled for allocating costs across related Items. |
| | NOTE: Typically for Service Items, the infrastructure costs would be zero as this would be derived from the associated Parent Items. |
| Monthly Cost | The amount invested on a monthly basis to maintain the running of an Item. This figure is also used when the Delegate Costs option is enabled for allocating costs across related Items. |
| Usage Unit Cost | This is used as a reference field, where the User can enter base unit cost, for example per Megabyte data charge, which can be used for calculating costs in custom reports. |
| Purchase Date | The date the Item was purchased. |
| Depreciate Over | Enter the number of years the Item is to be depreciated over, if required. |
| Depreciated Value | The system calculates the current value of the Item based on the Purchase Date and the number of years the Item is to be Depreciated Over. |
| Audit Date | Set the date the Item is next to be audited. |
| PO Number | If Purchase Orders are enabled for the system, the field is visible and automatically populated with the PO number generated by a User within the Finance>Purchase Orders tab, when the Item order was recorded in the system. |
| Charges | |
| Price (per user) | Draws the figure from the Service Item Type Costs tab and displays this as a daily amount. This figure is then multiplied with the number of Users/Customers assigned to the Item, to calculate the forecasted Revenue. |
| Cost (per user) | Draws the figure from the Inherited Costs and displays this as a daily amount. This figure is then multiplied with the number of Users/Customers assigned to the Item, to calculate the actual Costs. |
| Revenue | |
| Month to Date | Uses the Charges Price figure, multiplied by the number of Users and days of month passed, to calculate the month to date figure. |
| Previous Month | A reference figure for an average monthly revenue figure, based on the previous month's revenue for the Service Item. |
| Costs | |

| Financial | Description |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Month to Date | Uses the Charges Cost figure, multiplied by the number of Users and days of month passed, to calculate the month to date Cost. |
| Previous Month | A reference figure for an average monthly cost, based on the previous month's cost for the Service Item. |
| Inherited Costs | |
| Inherited Capital | Total infrastructure costs of parent CI's that directly contribute to the cost of the Service Item. This figure is derived from all the Cost fields within the Item Information>Costs tab of related Parent Items. |
| Inherited Ongoing | Running costs of all associated Items that enable the Service Item to continue to function. This figure is derived from all the Monthly Cost fields within the Item Information>Costs tab of related Parent Items. |
| Delegate Costs | To enable cost delegation across the relationship map allowing associated Items to inherit the costs of the current CI, select Yes. This will take the figures from the Cost and Monthly Cost fields for the Item and apply them across related Child Items. |
| | Define the technique to be used to evaluate the cost split: |
| | Child Count:Costs are split by percentage based on the number of child CI's the costs are being delegated across. |
| | User Count:Costs are split proportionally based on the number of users of the child CI's the costs are being delegated across. |
| | <i>Custom %</i> : The relationship itself allows for the % cost to be assigned |
| Availability | |
| Avg Repair Time | Entries displayed here are automatically calculated based on the average length of time an Item is offline. |
| Avg Time To Fail | Figures displayed here are automatically calculated based on the average time between an Item being moved to an offline State. |

The figures displayed within the Availability fields are automatically calculated by the application, using the Item Lifecycle as it moves between online and offline States.

| Information | | | | |
|--------------------------|-------------|---------|------------------|--------------------------|
| Information | Details | Costs | Requests | elationships |
| Edit | Duplicate | 😫 Print | | Item # 100002 (Service D |
| Financial | | | SLA Details | |
| Cost | \$0.00 | | Service Level | |
| Monthly Cost | \$0.00 | | | |
| Usage Unit Cost | | | | |
| Purchase Date | | | Availability | |
| Depreciate Over | years | | Avg Repair Time | |
| Depreciated Value | \$0.00 | | Avg Time To Fail | 44 Days, 22 Hrs, 24 Mins |
| Audit Date (mm/dd/yy) | | | | |
| PO Number | | | | |
| Charges | | | | |
| Price (per user) | N/A | | | |
| Cost (per user) | N/A | | | |
| Revenue | | | | |
| Month to Date | N/A | | | |
| Previous Month | N/A | | | |
| Costs | | | | |
| Month to Date | N/A | | | |
| Previous Month | N/A | | | |
| Inherited Costs | | | | |
| Inherited Capital | \$12,000.00 | | | |
| Inherited Ongoing | \$150.00 | | | |
| Delegate Costs | Yes No | | | |
| | | | | Done |

Completing the Depreciate Over field allows the application to automatically keep track of the Item depreciation over the specified number of years. The current value of the Item after depreciation is displayed at Depreciated Value. The Audit Date field is used to record the date when the Item was last audited.

1.27.1 Billing Enabled

When Billing is enabled, a Service Level hyperlink is available within the Costs screen. This provides access to the Service Level Agreement details that govern the lifecycle for Requests logged against the Item.

| Information | Details | Costs | Requests R | elationships |
|-------------------------|-------------|--------------------|------------------|----------------------------|
| Duplicate | B) Print |) | | Item # 100002 (Service Des |
| Financial | | | Contract | (|

| | | | | |
| | | | Delete | Cancel Save |

If Invoices are also enabled, an Invoice Number hyperlink is available and when selected, will display the invoice details for the Contract that covers the Item. The Start Date and End Dates stipulate the contract length covered for the Item. It is summarized by the days or hours recorded in the Expires field.

The Contract tab within the Item Information Costs tab summarizes the contract details that cover the Item. Further Contract details can be found within the relevant Contract Number within the Finance>Invoices screen.

1.27.2 Create a Contract

Through the Item Costs tab, Contracts with an associated Invoice Number (if relevant) can be generated for an Item, after it has been logged in the system.

To add a Contract to an Item, within the Configuration>Item screen:

- 1. Select the Item Number
- 2. Move to the Costs tab
- 3. Click Edit

The Add and Delete button are made available within the Contracts tab

| | | | | | | Contracts |
|------------|--------|-----|----------------|----------|--------|-----------|
| Contract # | ₹ Туре | SLA | ≣ Start Date | End Date | ≣ | Add |
| | | 0 - | 0 of 0 Results | | | Delete |
| | | | | Delete | Cancel | Save |

4. Click Add

(If Invoices are enabled in the system, an Invoice number will be automatically generated and assigned to the Contract).

| Item Information | | |
|------------------|-------------------------------------------------------------|--|
| Information | Details Costs Requests Relationships Outages AMIE Snapshots | |
| Contract | | |
| Invoice Number | 100016 | |
| Service Level | | |
| | Warranty Cancel | |

5. Select an SLA from the drop-down option

The screen will display the SLA details and the Contract Type locked to Per Item.

| Item Information | | | | | | | |
|---------------------------------------------|--------------|---------------|------------------|-----------------|---------------|----------|----------------|
| Information | Details | Costs | Requests | Relationshi | ips Ou | ıtages | AMIE Snapshots |
| Contract Invoice Number Service Level | 100016 | | | | | | |
| | Priority | Response Time | Restoration Time | Resolution Time | 24 x 7 suppor | rt Alert | |
| | Urgent | 6 Hours | 12 Hours | 24 Hours | Yes | None | |
| | High | 12 Hours | 24 Hours | 48 Hours | Yes | None | |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None | |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None | |
| Contract Type | Per Item | | | | | | |
| Time | Subscription | - | | | | | |
| Start Date End Date | Support Hour | s | | | | | |
| Notes | | | | | | | |
| | | | | | | | |
| Price | \$0.00 | | | | | | |
| Tax | \$0.00 | | | | | | |
| Taxable | | | | | | | |
| Total Cost | \$0.00 | | | | | | |
| | | | | | | Cancel | Save |

6. Assign the Time period to be covered by the Contract

If *Subscription* is selected, the Start and End Dates are automatically completed by the system, but can be edited if required.

If *Time Limited Subscription* is selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually, entering the length of time for the subscription period.

If *Support Hours* is selected, the number of support hours purchased by the Customers should be entered.

If *Support Hours by Month* is selected, set the number of hours purchased per month and define which day of the month contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

- Subscription a contract that covers a specified period of time
- Time Limited Subscription a contract that covers either a specified period of time or number of support hours, whichever limit is reached first
- Support Hours a contract that defines the number of support hours covered.
- 7. Add any relevant Invoice Notes
- 8. Check the Taxable box, if the Contract is to be taxed
- 9. Click Save.

(If Invoices are enabled in the system, an Invoice number will be automatically recorded for the Contract and made available within Finance>Invoices.)

1.28 Creating Custom Field Lists

Lists can be created as a data type option within custom fields across the application. The can be created for Item Category and Item Type custom fields, Classifications for requests and system-wide custom fields activated by an Administrator. Lists allow a User to create a series of entries for a custom field that will appear as a drop-down option list.

1.28.1 Creating a New List Entry

To create a new list entry within the List Contents field:

1. Right click the Entries link

The Create option is displayed

| Style | Text List |
|--------------------|-------------|
| List Contents | 🛺 Entries |
| Default Value | Create |
| Enable Description | Rename |
| Enable Description | Delete |
| | Cancel Save |

2. Click Create

A New node link displayed

| Style | Text List |
|---------------|-------------|
| List Contents | 🛓 🌆 Entries |
| | New node |

- 3. Enter the name of the field
- 4. Click outside the field to save the entry

| List Contents | Leftine work | |
|---------------|--------------|--|
| | | |

5. Repeat this process until all list entries have been added

To create a nested list, right click on the relevant list entry and repeat the above process.

6. To move an existing entry to a new position, select the entry, then drag and drop the entry into its new location

| Style | Text List |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| List Contents | 🛓 🔚 Entries |
| | offline work Connection Router Hardware Hardware Online |

7. When all the relevant details have been defined for the custom field, click Save.

1.28.2 Creating Nested List Entries

List entries can be expanded to include nested options.

To create a nested list:

1. Right-click the relevant list entry header

The Create, Rename, Delete and Make Default options are displayed.

| Item Categories | | |
|-----------------|------------------------------------------------------------------------|----------|
| Category | Lifecycle Classifications Responses Types | |
| Classifications | | Hardware |
| | Classifications Configuration Faults Create Rename Delete Make Default | |
| Custom | | |
| | | Done |

2. Select Create

A text box will appear under the list entry.

| a. 🕼 Classifications |
|-----------------------|
| 🖡 🚛 Configuration |
| 🔺 🛄 Faults |
| 🔤 🛺 New node |
| - 🕼 Downloads |
| - 🌆 General (Default) |
| - 🕼 Manuals |
| 🛄 Network |

- 3. Enter the name for the list entry
- 4. Click away from the text box to commit and save the change

- Move an existing list entry to a new position, if required Select the entry, then drag and drop the entry into its new location
- 6. The above steps can be repeated until the nested list is complete.

| - 🕼 Classifications |

| 🕼 Manuals |
| 📗 Network |

1.28.3 Renaming a List Entry

Any list entry can be renamed.

To rename a list entry:

1. Right-click the list entry link

| 🎍 🌆 Classif | fications | | | | | |
|-------------------|--------------|--|--|--|--|--|
| 🚛 🜆 Configuration | | | | | | |
| 🖉 🖌 🚛 | Faults | | | | | |
| | 📗 Internal | | | | | |
| L | External | | | | | |
| 📗 Do | Croate | | | | | |
| 🛄 Ge | Rename | | | | | |
| | Delete | | | | | |
| | Make Default | | | | | |

- 2. Click Rename
- 3. Edit the field content
- 4. Click away from the text field to save the change.

1.28.4 Deleting a List Entry

To delete a list entry:

- 1. Right-click the relevant list entry
- 2. Click Delete
- 3. Click Done when the list is complete.

1.29 Responses Templates

The Responses tab within an Item Category allows the Supervisor to define template replies for Notes sent related to requests received against the Item Category. This ensures the service desk responds to issues in a consistent manner, and in line with the support organization's policies and protocol. Additional templates can be configured within the Item Type>Responses tab. These templates are only available for requests related to the Item Type.

The following screen displays a list of default template options available within the Notes tab of a request:

| Note Time + + 0 (1 | Minutes) 03/27/12 15:06 | | Select a template | (†) |
|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|--------------------|-------------------|----------|
| Format Font Family | • Font Size • 60 🐇 нт | ml 💞 🕶 | | |

| | | |
| | | |
| | Path: p Wor | ds:0 // |
| | Cancel | Save |

7. Complete the content for the Note and Save.

1.29.3 Deleting a Template

To delete a template:

- 1. Go to Configuration>Categories
- 2. Select the hyperlink for the relevant Category
- 3. Move to the Responses tab
- 4. Click Edit

| Ite | m Categories | |
|----------|----------------------------------------------------|---|
| | Category Lifecycle Classifications Responses Types | |
| | Add Remove Hardware | 9 |
| | Title | 1 |
| | Customer Change Request | |
| | Request Log Files | |
| v | Request Steps to Replicate Issue | |
| | 1 - 3 of 3 Results | |
| | Cancel Save | |

- 5. Check the box in the column next to the template Title
- 6. Click the Remove button.

1.30 Federation Tab

(This tab is only visible when two or more asset management tools are synched within AMIE as configured in Admin>Setup> AMIE tab.)

The Federation tab is used to build the Category Map, which allows for information sourced from multiple asset management systems for a single asset to be recorded against one Item in the CMDB. Based on the map built here, fields within the Item Details tab are populated when AMIE snapshots are applied to new or updated Items.

1.30.1 Creating a Category Map

Within the relevant Category:

- 1. Go to the Federation tab
- 2. Click Edit

The system will open each field to display the asset management tools that are configured within AMIE, in the Admin>Setup>AMIE tab.

3. Assign the asset tool source from the pop-up options for each field

The Item Number, Item Type and Manufacturer are included for Categories.

NOTE: Defining a source for the Item Type and Manufacturer is mandatory

4. Complete one or two of the Snapshot Merge fields

The Snapshot Merge fields are used by the system to verify the identity of an Item across the asset management tools configured in AMIE, when synchronizing Item Details from multiple sources.

5. Click Done.

| n Categories | | | | | |
|---------------|-------------------------------------------|------------|--|--|--|
| Category | Lifecycle Classifications Responses Types | Federation | | | |
| | | Hardwa | | | |
| Details | | | | | |
| Item Number | ZENworks Configuration Management v11 | | | | |

1.31 AMIE Snapshots

(The AMIE submenu option is only visible when two or more asset management tools are configured to be synched within AMIE as defined in Admin>Setup> AMIE>Setup tab.)

The AMIE Snapshot submenu is also known as the staging area for building a federated CMDB, which is a CMDB that uses information sourced from multiple asset management repositories.

When the application is synchronized with multiple asset management tools and the automatic Item creation option is disabled in Admin>Setup>AMIE Import, the system creates an image or Snapshot of the asset information which is made available within the AMIE Snapshot tab. As different asset management tools may not record the same information for an Item, the Supervisor can combine the most relevant information from the different sources into the one Item within the CMDB, by merging snapshots created by the different tools using the Category Map configured for the Item Category. (See: Federation Tab.)

| AM | MIE Snapshots | | | | | | | | | | |
|-----------------------------------------------------------------------|---------------|-----------------------------------------|------------|----------------------------|--------------------|--------------|-------------------|-----------------------------------------|-------------------|------------------|-----------------|

1.31.1 Item creation in the CMDB

When Item information is recorded in multiple AMIE Snapshots, the Supervisor can merge images into one Item within the CMDB by first conducting a search on key fields such as MAC Address or Network Name for Hardware, or Version Number and Parent Id for Software Items. To maintain relationship data between the Hardware and Software Items (i.e., Parent/Child relationships), the order of Item creation is important. Always create parents first, then children, or in other words, Hardware first then the Software.

After identifying and selecting the relevant Snapshots, by ticking the fields next to the Id#, click the Merge button to display a synthesized Snapshot Detail screen. The information displayed on the Snapshot Detail, and recorded against the Item, is based on the Category Map configured for the Item Category.

If the Control CMS via RFC is enabled in Admin>Setup>Privileges>System, merged or promoted Snapshots are not automatically created as Items in the CMDB, but generate a Change Request that will require approval before the Item is saved in the CMDB. If the option is disabled, when the Save button is selected, the Item is automatically created in the CMDB.

All AMIE Snapshots applied to an Item are removed from the AMIE Snapshot List View, when the list filter is set to display Unassigned Snapshots.

1.31.2 Merging Snapshots

Merge

Use the Merge button when multiple Snapshots of an Item are to be stored against a single Item record in the CMDB. Select the related Snapshots by checking the relevant boxes next to the Id Number, and click the Merge button.

1.31.3 Creating Items from Snapshots

Use the Create button to convert a single Snapshot into an Item record in the CMDB. If the Item already exists in the CMDB, the pre-existing details will be updated. If it is a new Item, a new Item record will be created. To promote a single Snapshot into an Item in the CMDB, check the box next to the Id Number, and click the Promote button.

1.31.4 Searching AMIE Snapshots

The search button within the Configuration>AMIE Snapshot screen allows the User to find related AMIE Snapshots using any Item attribute, including the fields created within Item Category templates.

| Search Parameter Options | |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Global Options | |
| Snapshot Status | All : searches assigned and unassigned AMIE Snapshots. |
| | Unassigned : searches AMIE Snapshots that are not assigned to an Item. |
| | Assigned : searches AMIE Snapshots that have been assigned to an Item, and therefore not displayed in the List View. |
| | Hidden : searches through hidden AMIE Snapshots that have never been applied to an Item. |
| Server | Select a single server option to refine the search, or leave blank to search through all systems configured in AMIE. |
| Manufacturer | Enter Manufacturer details of the Item. This field supports partial text search. |
| Owner Options | |
| Username | Often the last logged in User for the Item. This field supports partial text search. |
| Org Unit | The Org. Unit owner for the Item. This field supports partial text search. |
| Type Options | |
| Item Category | Select a Category from the popup list to restrict AMIE Snapshots by the Item Category. A selection will display the custom fields for the chosen Category, which can be completed to refine the search. |
| Item Type | The Item Type of the Item. This field supports partial text search. |

Search Parameter Options

Parent Options

AMIE Snapshot Id

Search on a parent AMIE Snapshot Id. This information is useful when merging children Items, such as Software.

1.31.5 Hiding Snapshots

Hide

To ensure that a Snapshot is ignored in future AMIE imports, click the Hide button after checking the field next to the relevant Snapshot Id Number.

1.31.6 Enabling hidden Snapshots

Enable

If a search is conducted on hidden Snapshots, an Enable button becomes available and allows the User to re-enable a hidden Snapshot.

1.32 Category Lifecycle

The Lifecycle details the stages of life for a Configuration Item. This allows Items to be tracked from the conceptualization/purchase stage through to being decommissioned/discarded, and can be used to indicate availability levels throughout the Lifecycle.

The States configured here are used within the Item information screen and allow the User to easily see if an Item is at a start or end point of its life, whilst also indicating if the Item is available or not. If an Item is moved to an Offline state, this information is also used on the Outage pages, for easy reference.

By default, the system is installed with some pre-defined Lifecycles, which are displayed with the three types of States:- Previous, Current and Next. Based on the configuration of the Current State, the listings displayed in the Previous or Next column show where an Item can move to from the Current State.

If the default Lifecycles do not match the requirements of the service and support organization, they can be customized. To avoid confusion, it is suggested that the default Lifecycle States be erased completely if they are not relevant to your organization.

1.32.1 Creating a Lifecycle

NOTE: It is recommended that all Lifecycle States be written down and mapped before this process is started.

- 1. Select Configuration>Categories
- 2. Click on the Item Category hyperlink
- 3. Move to the Lifecycle tab
- 4. Click the Current State hyperlink to edit the State, or, click New to create a new transitional State The States/Status screen appears.

| Item Categories | 5 | | | | |
|------------------|--------------------------------------------------------------------------------------------------------------|-----------------|------|----------|--------------|
| Category | Lifecycle | Classifications | Resp | onses | Types |
| | | | | | Audio Visual |
| Status | | | | | |
| Name | New Status | | | | |
| Active State | 🔘 Yes 🛛 🔍 No | | | | |
| Offline State | 🔘 Yes 🛛 🔍 No | | | | |
| Customer Visible | 🔘 Yes 🛛 🔍 No | | | | |
| Entry Point | | | | | |
| Exit Point | | | | | |
| Previous States | | | | | |
| | Available sta | ates | | Selected | states |
| | Deployed Arrived Pending Configuration Pending Test Pending Deployment Pending Upgrade | 4 III + | 0 | None se | lected |
| Next States | | | | | |
| | Available sta | ites | | Selected | states |
| | Deployed Pending Configuration Pending Test Pending Deployment Pending Upgrade Out for repair | A III + | 0 | None se | lected |
| | | | Can | | Save |

- 5. Rename the State as required
- 6. Complete the State configuration:
- 7.

| | Description |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Status | |
| Name | Enter the name of the Lifecycle State. |
| Active State | Stipulates if the Item is Active, when assigned this State. |
| Offline State | Only visible when Active is set to No. Indicates if the Item is offline and inactive. Items moved into states where this is enabled, have availability metrics calculated. |
| Customer Visible | When selected, Items in this State are visible in the Customer Portal |

| | Description |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Pre-production State | Only visible for Service Category lifecycle states. Items that use this state are available within the Service Pipeline filter view of the Configuration>Items tab. |
| Entry Point | An Entry Point is used to indicate the start of a Lifecycle. To make the state a Workflow Entry Point, select the Entry Point checkbox. |
| | As the Entry Point is the first state, the Previous States field will be removed. |
| Exit Point | Select whether the state will be an Exit Point. An Exit Point is used to indicate the end of a Lifecycle. |
| Listener Class | This field is visible if the Outbound Webservices option is enabled in the Admin>Setup>Privileges>System tab. |
| | Complete this field, if assigning an Item to this State is to trigger an event in an external system. |
| | This field should contain the name of a Java class that implements the interface com.livetime.ws.listen.LifecycleListener that has been compiled into a jar file and added to the LiveTime classpath. Please contact support for further details. |

NOTE: It is advised Users enter the list of all States, before defining any relationships to Previous or Next States

- 1. To return to the Lifecycle Current State list, save the updated State information
- 2. Continue editing, adding or deleting States until all relevant transitional States exist within the Lifecycle

After each Lifecycle State has been configured, the Lifecycle itself should be mapped.

3. Select a Current State hyperlink to configure the Previous State or Next State options,

Using all Available States entered in the Lifecycle, define the status direction options of an Item that uses this Item Category template.

| | Description |
|------------------|---------------------------------------------------------------------------------------------------------------------|
| Status | |
| Previous States | If the State is not an Entry Point, use the arrow button to select Previous States from the Available States. |
| Next States | If the State is not an Exit Point, use the arrow button to select the Next States. |
| Available States | Lists all the possible States that can be included in the Lifecycle. |
| Selected States | Lists the states that have been included as a Next or Previous State of the Lifecycle. |

4.

NOTE: When a State is used as a Previous or Next State, it allows an Item to move forward and backward in a Lifecycle

An Entry Point State cannot have any previous States and an Exit Point State cannot have any Next States.

- 1. Highlight the relevant States in the Available States box
- 2. Click the arrow pointing towards the Selected States box

| Next States | | | | |
|-------------|---------------------------|----|---|-----------------|
| | Available states | | | Selected states |
| | Offline Decommissioned | * | 0 | None selected |
| | | Ψ. | | |

- 3. When all States have been allocated, click Save
- 4. Save the assignment, and complete the process for all stages of the Item Lifecycle
- 5. Customise settings if editing a Service Category

Assign a Group within the associated Service Portfolio Team, this will allow these Users to edit the Item details when assigned this stage of the Category Lifecycl

| Service Team | |
|--------------|---|
| Group | • |

6. Click Save.

Move to the Classifications tab, to define request Classifications for the Item.

1.32.2 Deleting a State

It may be necessary to delete a system default State or a State that is no longer in use. Note that a State cannot be deleted if it has been assigned to an Item.

To delete an unused State:

- 1. Select Configuration>Categories
- 2. Click on the Item Category hyperlink
- 3. Move to the Lifecycle tab
- 4. Select the Current State link
- 5. Click Delete.

Item Lifecycle Example

In this example the Item Category Hardware has a Lifecycle State of Arrived. This State is inactive and an entry point. Items assigned this State would not be visible on the Customer Portal.

After this State is assigned to an Item, the next State that the Item can move to is any of the States listed within the Selected States list (i.e., Deployed, Pending Configuration, Pending Test, Pending Deployment or Out for Repair).

Setting up the Lifecycle Status "Arrived"

1.33 Category Classifications

A list of Classifications used to define issues are created within this tab and used as the generic Classification for requests logged against Items that apply the Item Type Category being configured. The Classifications are also used by the system for proactive Incident analysis and Problem groups.

Supervisor Users can define additional Classifications for specific Item Types, within the Configuration>Categories>Item Categories>Classification tab.

The system is installed with several default Classification Type Categories, which can be edited if required.

NOTE: The General Classification is owned and used by the system and cannot be deleted. It is also advised that this Classification not be renamed, as this is the Classification assigned to requests when they are created via email.

1.33.1 Classification Tab

Additional Classifications can be created for each Item Category, while the system provided Classifications can be renamed or deleted. The Custom facility, when enabled, allows Users to add Classifications during the request creation process.

| Item Categories | | |
|-----------------|---------------------------------------------------------------------------------------------|----------|
| Category | Lifecycle Classifications Responses | Types |
| Classifications | | Hardware |
| | Classifications Configuration Configuration Configuration General (Default) Manuals Network | |
| Custom | On Off | |
| | | Done |

Creating a New Item Category Classification

To add a new Classification:

- 1. Select the Classification tab of an Item Category
- 2. Right-click on the Classifications header
- 3. Select Create

| Item Categories | | | |
|-----------------|---------------------------|-----------|----------|
| Category | Lifecycle Classifications | Responses | Types |
| Classifications | | | Hardware |
| | Classifications | |] |
| | Create | | |
| | Rename | | |
| | Delete | | |
| | Make Default | | J |
| Custom | On Off | | |
| | | | Done |

4. Enter the details in the newly created node

| Item Categories | |

8. Click Save.

Creating Sub-Classifications

Classifications can be expanded to include nested Classifications.

To create Sub-Classifications:

1. Right-click the relevant Classification header

The Create, Rename, Delete and Make Default options are displayed.

| Item Categories | |
|-----------------|------------------------------------------------------------------------------------------------|
| Category | Lifecycle Classifications Responses Types |
| Classifications | Hardware |
| | Classifications Configuration Faults Create Rename Delete Make Default |
| Custom | On On Done |

2. Select Create

A text box will appear under the Classification.

| A. Classifications | |

Renaming a Classification

Any Item Category classification can be renamed.

To rename a Classification:

1. Right-click the Classification

| 🛓 📗 Classifi | ications | |
|--------------|--------------|--|
| 🖣 📗 Cor | figuration | |
| 🛛 🚛 🛄 | Faults | |
| | 🕼 Internal | |
| L | 🕼 External | |
| 📗 Do | Greate | |
| 🛴 Ge | Rename | |
| 🛄 Ma | Delete | |
| | Make Default | |

2. Click Rename

- 3. Edit the field content
- 4. Click away from the text field to save the change.

Making a Classification Default

To make a classification default:

1 Right-click the required classification and then click Make Default.

Deleting a Classification

To delete a Classification:

- 1. Right-click the relevant list entry
- 2. Click Delete
- 3. Click Done when the Classification Categories are complete.

1.34 Service Catalog

The Service Catalog can be accessed as a filter view within the Items sub-menu screen of the Configuration tab. It is part of the Service Portfolio made available to Customers, displaying information regarding Live IT Services. The Service Catalog may include information about service deliverables, any associated costs, contact points, ordering and request procedures.

For an IT service organization, the Service Catalog may include the following options:

- Email
- Network Monitoring
- Security
- Video Conference
- Remote Access
- Mobile Communications (Cell Phones/PDAs)
- Wireless
- Laptop Computing
- Desktop Computing
- File Sharing
- Printing/Scanning.

Items included in the Service Catalog can be included as standalone Items or underpinned by physical Items stored within the Configuration Management Database (CMDB). Within the CMDB, relationships can be mapped between Configuration Items (Items) in the Relationships tab of an Item. This map is then available within the Impact tab of a request, to allow for the impact of a request on the Organization to be assessed.

Service Catalog Relationships are defined and visible within the Relationships tab of an Item.

To view the Service Catalog:

1. Within the Configuration>Items tab

2. Select the Service Catalog (sys) filter

1.34.1 Create a Service

To create a new Service, such as Email or Printing, create an Item Type template using the Service Category Template, which has the Service Category option enabled within the Categories tab (See: Category). As part of the Service Category template, define relevant attribute fields as being Customer Visible, which will display information recorded on the Details tab of the Service within the expanded view of a Service in the Customer Portal.

| | () My Services | Service Catalog | | | |
|----------------------------------|------------------|--------------------------|------------------|-----------------|----------------|
| | | | | | |
| Service # Microfocus - eLearning | | | | | 3 |
| Properties | | | | | Create 👤 🔒 |
| V- | | | | | |
| Category | Service | | | | |
| Туре | Website Services | | | | |
| Status | Offline | | | | |
| Service Level | Warranty | | | | |
| Service Level Targets | Priority | Deseese Time | Restoration Time | Resolution Time | 24 v 7 sussest |
| | | Response Time 6 Hours | 12 Hours | 24 Hours | 24 x 7 support |
| | Urgent High | 12 Hours | 24 Hours | 48 Hours | Yes Yes |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes |
| | | | | _ | Edit Cancel |

Then create an Item using the newly created Type template. Within the Details tab of the Service Item, complete the Description to provide information about the Service within the Customer Portal Services tab. (See: Item Details)

| Item Information | | | |
|------------------|-------------------------------------------------------------------------------------|-----------------------------------------|------------------------------------|
| Information | Details Costs Req | quests Relationships | Outages AMIE Snapshots |
| Duplicate | 吕 Print | | Item # Service Desk (Service Desk) |
| Details | | Details | |
| Business Unit | | Date Responsible | |
| Туре | | Date Activated | |
| Environment | | Contact | |
| | Descr | ription Notes | Attachments Audit Trail |
| Description | Format • Font Family • Font Size A • B I U ABC | • ∞ ※ HTML ≣ ×, × ² | |
| | Description entered here is displayed in the cus | itomer portal. | |
| | Path: p | | Words:8 |
| | | Delete | Cancel Save |

Within the Item Relationship tab, define the underpinning infrastructure of the new Service Item, if relevant. (See: Relationships.)

1.34.2 Managing Service Costs

Users with the Finance Role are able to manage the information related to Service Item Costs. Items created with the Category Template that have the Service Category option enabled, allow organizations to calculate and recover costs for offering services. At the Item Type level, the costs for offering a service can be calculated against multiple service level agreements. (See: Item Types.) Within the Cost Tab of a Service Item, figures based on the Item Type associated with the Item are provided, to allow the support organization to recover costs for providing the Service. (See: Service Item Cost Tab.)

1.34.3 View Service Relationships

Within the Relationships tab of the Item Information screen, a Relationship Map visually displays the connections that have been defined for an Item. All Item Relationships are listed in the Relationships Table beneath the Map. The Relationship Map can display up to 48 Child Items and 16 Parent Items in the one diagram.

The central icon of a Map is a visual representation of the selected Item. Scroll over an Item label to view any information recorded on the Information and Details tabs of the Item. To drill-down through the relationships, click on an Item icon label. To change the focus of the Relationship Map to another Item, click on the Item icon label and the system will request that OK be selected before updating the central node of the Map.

The Relationship Table data displayed at the base of the map can be filtered using the Direction filter view of Parent-Child or Child-Parent.

The map displays the relationship between each Lifecycle State by using different colors to represent the type of Lifecycle State.

| Color | |
|---------------|-------------------------------------------------|
| Green Circle | CI is assigned an online status. |
| Red Square | CI is assigned an offline status. |
| Blue Triangle | Service CI is assigned a pre-production status. |

The Lifecycle State name can be accessed by scrolling over the Item icon within the Map.

1.34.4 Delete a Relationship:

To remove the Relationship between Items:

- 1. Select the relevant Item within the Configuration tab
- 2. Move to the Relationships tab
- 3. Click Edit
- 4. Select Delete

A table with the Relationship details is displayed

| Item Information | | | | | |
|------------------|---------------------|----------------|-------------------|-----------------------|---------------------------|
| Information | Details | Costs | Requests | Relationships Outages | AMIE Snapshots |
| 日 Print | | | | ltem # srm-tst-nsd-2 | 223 (Dell Latitude E6430) |
| Direction | Parent - Child | • | | | Display: 10 💌 |
| Relationships | Current Item | Relationship | ■ Related Item | ■ Item # Identifier | Category |
| | Dell Latitude E6430 | is a parent of | Windows Bundle | Notepad++ | ZENworks Bundle |
| | Dell Latitude E6430 | is a parent of | Windows Bundle | Firefox 1.0 | ZENworks Bundle |
| | Dell Latitude E6430 | is a parent of | Windows Bundle | Microsoft 2010 | ZENworks Bundle |
| | | | 1 - 3 of 3 | Results | |
| | | | | Cancel | Delete |

- 5. Select the Relationship Direction to display the relevant Relationship table
- 6. Mark the checkbox next to the Relationship that is to be removed
- 7. Select Delete
- 8. Click Done to return to the Item list.

1.34.5 Managing the Service Catalog

The portfolio of services offered within an organization can be managed by the Service Portfolio Team. See: Service Portfolio Team.

1.35 Details Tab

Once the basic information for an Item has been completed, additional details can be defined for the Item. The Details tab displays a list of custom fields set for the Item's Category. The information to be completed within this section is configured by the Supervisor when customizing the Item Type templates in Configuration > Categories. Fields marked as Required, must be completed for the Item Details of the Item to be saved successfully.

For more information about Item custom fields, see: Categories.

| Item Information | | | |
|------------------|------------------------------------------------|-------------------|------------------------------------|
| Information | Details Costs Re | quests Relationsh | ips Outages AMIE Snapshots |
| Edit | Duplicate 吕 Print | | Item # Service Desk (Service Desk) |
| Details | | Details | |
| Business Unit | | Date Responsible | |
| Туре | | Date Activated | |
| Environment | | Contact | |
| | Descr | ription Notes | Attachments Audit Trail |
| Description | Description entered here is displayed in the c | ustomer portal. | |
| | | | Done |

Clicking Save at the far bottom of the page after the Details tab has been completed, will create the Item and save it to the database.

NOTE: Items can be duplicated at any time by clicking the Duplicate button. A new Item is created with properties that are identical to the original Item (with the exception of the Item Number, as this must be unique and is generated automatically).

1.35.1 Item Description

Content entered in the Description field is made available on the Customer Portal in the expanded information window of an Item. For Service Items included in the Service Catalog tab of the Customer Portal, information about the Service can be included within the Item Description field. The Service Item information can be further defined by completing Item attribute fields that are configured as Customer Visible within the Category Information screen, and therefore also displayed in the Customer Portal.

To add an Item Description, within the Item's Details tab:

- 1. Click Edit
- 2. Move to the Description tab
- 3. Add information in the Description field

| | Description | Notes | Attachments | Audit Trail |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------|-------------|
| Description | Format • Font Family • Font Size • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • • •< | mL | | |
| | Used by the admin department to provide payroll and HR s | oftware. | | |
| | Path: p | | Words:11 | |
| | | Delete | Cancel | Save |

4. Click Save.

1.35.2 Item Notes

To add Notes to an Item, under the Item's Details tab:

- 1. Click Edit
- 2. Select the Notes tab

| | | Description | Notes | Attachments | Audit Trail |
|------|--------|--------------------|--------|-------------|-------------|
| | | | | | |
| Date | ₹ Note | | Ву | ■ | New |
| | | 0 - 0 of 0 Results | | | |
| | | | Delete | Cancel | Save |

- 3. Click New
- 4. Enter details in the Notes field

| | Description | Notes | Attachments | Audit Trail |
|------------------------------------------------------|---------------------------------------------|--------|-------------|-------------|
| | | | | |
| Format Font Family Font Size | GO ÇA HTML | | | |
| <u>A</u> • B <i>I</i> <u>U</u> AB€ ⋮ ⋮ ⋮ ↔ ≡ ≡ ≡ | X ₂ X ² | | | |
| The software needs to be installed on | | | | |
| Path: p | | | Wo | rds:4 |
| | | | Cancel Sa | ive |
| | | Delete | Cancel | Save |

5. Click Save.

The Note will be allocated an identification number hyperlink for access. It will also be time- and date-stamped.

1.35.3 Item Attachments

To add Attachments to an Item, within the Item's Details tab:

- 1. Click Edit to display the Attachment tab New button
- 2. Click New

| | Description | Notes Attachments Audit Trail | _ |
|--------------------------|-----------------------|-------------------------------|---|
| Browse No file selected. | Private V Description | Upload Cancel | |
| | | Delete Cancel Save | |

- 3. Browse and select a file
- 4. Enter a Description, if required
- 5. Adjust Private and Public option, if relevant

Selecting Public will make it accessible on the Customer Portal, when the Item is in a Customer Visible state.

6. Click Upload

1.35.4 Item Audit Trail

The Audit Trail tab records all changes that are made to fields within the Item Information and Details screens. These entries are made to record all the alterations made to Items and the CMDB.

To view an audit trail entry, under the Item Details tab:

- 1. Select the Audit Trail tab
- 2. Click on the identification number hyperlink to display the entry details.

| | | Description Notes | Attachments | Audit Trail |
|-----|----------------|-------------------------------------------------------|-------------|-------------|
| No. | Date 🔻 | Event | Ву 🔳 | <u>e</u> |
| 89 | 01/05/16 14:57 | Relationship created. Service Desk #Service Desk i | Sankar R | |
| 82 | 01/05/16 12:33 | Warranty Date changed from '16 Jan 2016' to '5 Feb | Sankar R | |
| 81 | 01/05/16 12:33 | Warranty Date set to '16 Jan 2016' | | |
| 72 | 01/05/16 11:42 | Added 'James Stewart' as an owner of this item | Kamal K | |
| 51 | 12/10/15 04:59 | Item Number changed from '100002' to 'Service Desk | Sankar R | |
| | | 1 - 5 of 5 Results | | |
| | | Delete | Cancel | Save |

1.35.5 Rollback Option

All changes recorded in the Audit Trail can be rolled back to reinstate information recorded against an Item.

To return Item details to previously saved information:

1. Click Edit

- 2. Select the identification number hyperlink of the entry to be reversed
- 3. Click the Rollback button
- 4. Save the Item.

The Item details will revert to information recorded before an update was made.

1.36 Relationships Tab

The Relationship Tab allows Users to view and/or create a Relationship Map for the current Item, with other Items within the CMDB.

The Relationship direction can be defined as:

- Service Oriented Parent-Child Relationship
- Component Oriented Child-Parent Relationship.

Within each view the Relationship Class can be defined as:

- Hierarchical Relationship
- Connection an association between the selected Items.

For a Service, such as the Email or Web Site Service, it is recommended that the Hardware be defined as the Parent for the Software Items and the Software be defined as the Parent of the Email or Web Site Service.

1.36.1 Create a Relationship

To create a new Item Relationship:

- 1. Select Configuration>Items
- 2. Select an Item
- 3. Select the Item's Relationship tab
- 4. Click Edit
- 5. Click New
- 6. Select the Relationship Direction and Class from the drop-down menus
- 7. Define the Relationship by selecting a description from the drop-down list

| Item Information | | | | |
|------------------|----------------------------|--------------------------|----------------------|--------------------------------------------|
| Information | Details | Costs R | equests Relationship | ps Outages AMIE Snapshots |
| 日 Print | | | Item | # Microfocus - Intranet (Website Services) |
| Direction | Parent - Child | • | | |
| Туре | | • | | |
| Related Item | Hierarchical Connection | | | |
| | Item Number | Item Type | Org. Unit | |
| | | | | 0 |
| | Item # | ■ Item Type ■ Identifier | Status | |
| | jdk-7u60- windows-x64 | Windows Bundle | Installed | |
| | Wordweb7 | Windows Bundle | Installed | |
| | Firefox 1.0 | Windows Bundle | Installed | |

NOTE: If the Relationship Type has the Inherit Parent Ownership option enabled, Child Items that use this relationship will inherit the Parent Item's owners. The ownership will not be editable and no other Parent Item can be assigned to the Child Item. A warning will be displayed if a relationship type has the Inherit Parent Ownership option enabled.

- 8. Use the Find Item field to locate the relevant Item
- 9. Click on the Item Number hyperlink to create the Relationship
- 10. Click Save to default to the Relationship Map view.

1.36.2 Relationship Map

Within the Relationships tab of the Item Information screen, a Relationship Map visually displays the connections that have been defined for an Item. All Item Relationships are listed in the Relationships Table beneath the Map. The Relationship Map can display up to 48 Child Items and 16 Parent Items in the one diagram.

The central icon of a Map is a visual representation of the selected Item. Scroll over an Item label to view any information recorded on the Information and Details tabs of the Item. To drill-down through the relationships, click on an Item icon label. To change the focus of the Relationship Map to another Item, click on the Item icon label and the system will request that OK be selected before updating the central node of the Map.

The Relationship Table data displayed at the base of the map can be filtered using the Direction filter view of Parent-Child or Child-Parent.

The map displays the relationship between each Lifecycle State by using different colors to represent the type of Lifecycle State.

| Color | |
|---------------|-------------------------------------------------|
| Green Circle | CI is assigned an online status. |
| Red Square | CI is assigned an offline status. |
| Blue Triangle | Service CI is assigned a pre-production status. |

The Lifecycle State name can be accessed by scrolling over the Item icon within the Map.

1.36.3 To delete a Relationship:

To remove the Relationship between Items:

- 1. Select the relevant Item within the Configuration tab
- 2. Move to the Relationships tab
- 3. Click Edit
- 4. Select Delete

A table with the Relationship details is displayed.

| Item Information | | | | | |
|------------------|----------------|---------------|----------------------------------|----------------|---------------------|
| Information | Details | Costs | Requests Relationships | Outages | AMIE Snapshots |
| 日 Print | | | | Item # Service | Desk (Service Desk) |
| Direction | Child - Parent | • | | | Display: 10 💌 |
| Relationships | Current Item | Relationship | ■ Related ■ Item # Item | Identifier | Category |
| | Service Desk | is a child of | Windows Microsoft Bundle 2010 | | Service |
| | | | 1 - 1 of 1 Results | | |
| | | | | Cancel | Delete |

- 5. Select the Relationship Direction to display the relevant Relationship table
- 6. Mark the checkbox next to the Relationship that is to be removed
- 7. Select Delete
- 8. Click Done to return to the Item list.

1.36.4 AMIE Item Imports and Relationships

Items with Item relationships that have been imported using the AMIE engine, retain the relationships that exist within the Asset Management Tool. A visible map of the relationships is recorded within the Relationships tab.

1.37 Item Types

Item Types are templates used to create Items. Items are specific instances of Item Types with individual asset detail information.

In this section, Item Types and their manufacturers can be created and edited. The Item Types default support Team is assigned here, as well as Criticality, service level and other default information.

| Item | s Types Categor | ries Vendors Manufactu | rers Outages AMI | E Snapshots | | | | | | | |
|------|---------------------|------------------------|------------------|------------------|----------------------|--------------------------|---------------------------|-------------------------|-------------------------|--------------|--------|

| | | 0 - 0 of 0 |) Results | | |
| | | | | Cancel | Save |

- 3. Enter the Name of the Item Type
- 4. Enter a Manufacturer using the drop-down list

Or, select 🕒 to add a Manufacturer. The Manufacturer screen appears. See: Create a Manufacturer

| Type Information | | | | |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Name | Name of the Item Type. | | | |
| Manufacturer | The manufacturer of the Item Type. New manufacturers can be created and existing manufacturers can be edited and deleted by using the Edit and New buttons that appear beside the drop-down menu of manufacturers. | | | |

- 6. Using the drop-down list, select the relevant Item Category
- 7. Select the Criticality for the Item Type

| Item Type | |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item Category | This signifies the type of Item. (Hardware, Software or Service are the default Types, but Users with the Supervisor Role can create more if required). |
| Identifier | The drop-down list that appears is drawn from the fields defined for the Item Category selected. Although this information is not required, the Identifier is used to differentiate similar Items that may be in use throughout an organization. For example, if an organization uses the same printers for all departments, an Item Category field of "Location" could be configured for the Item Details and this could also be used as a secondary Identifier for Printer Item. |
| Criticality | Rates the degree of importance of an Item Type within an organization, which can be adjusted on a per Item basis. The 'Impact' of a Request is initially pulled from the Criticality of the Item, but can be adjusted within the request Information screen if required. Requests logged through the Customer Portal, use the Criticality of the Item to set the Priority of the request. |
| | The Incident Analyzer, if enabled by the Administrator in Setup>CMS>Incident Analyzer, ca apply the Criticality to automatically detect Problems. |
| | The minimum Criticality level can also be used to determine the off-line Items that appear on Outage pages, if the Outages pages are enabled by the Administrator in Setup>Privileges>System. |
| Icon | When the Type details are saved, the Icon selected for the Item Category will be displayed. To customize the icon for the specific Item Type, selec |
| | the Icon to access the Upload Upload or |
| | Cancel Cancel options. The icon must be 128 x 128 pixels. |
| Unit Price | The per-unit price of the Item Type. |
| Instance Total | Number of instances owned by the organization. |
| Assigned | Number of instances assigned to Customers as Items. |

| Item Type | |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hidden | Select 'On' to ensure Customers cannot view this Item Type within the list in the Customer Portal. If all Item Types use this selection, the Item Type list will be completely removed from the Portal. |
| | Items created using Item Types with Hidden enabled, will not allow Customers to generate requests against them in the Customer Portal, nor will they be able to view or receive updates about requests logged by the User against Items with this functionality enabled. |
| Creation | Enabling this option gives Customers using the portal the ability to create new Items using this Item Type (if they have been granted the ability to create Items by the Administrator in Setup>Privileges>Customer>Create Item. (This option is not displayed when the Hidden option is enabled.) |
| Ignore Share | Enabling this option overrides the system level option for sharing requests raised against Items of this Type. Requests raised against Items of this Type will not appear in the customer portal when viewing shared requests is enabled. |
| Add Forum Topic | Create a forum topic using the Item Type Name. This option is only displayed when a new Type is being created. |
| Incident Default | The Team of Technicians assigned to support Incidents received related to the Item Type. See: Teams |
| Problem Default | The Team of Technicians assigned to support Problems received related to the Item Type. See: Teams |
| Change Default | The Team of Technicians assigned to support Change Requests received related to the Item Type. See: Teams |
| Request Default | The Team of Technicians assigned to support Service Requests received related to the Item Type. See: Teams |
| Service Level Default | The default service level for the Item Type. When Billing is enabled, service levels without a cost are listed as an option. The service level with an associated cost can be applied when the Item created, this ensures Item contract payment is processed. |
| Support Levels | All Service Level Agreements assigned to the Item Type, which will be displayed as options when a request is created applying Item that uses this Type template. SLAs listed here, are used within the Costs tab of Service Types to forecast break even points on the Service relative to the number of Users. |

Find SLA (Name)

To assign multiple SLAs use this option. Click (2) to view all SLAs or refine the search by entering a specific name. Select the SLA hyperlink to assign the SLA to the Type Information. Click

Cancel to clear the search field.

- 9. Enter the Unit Price for the Item Type. This is an optional field that is used for asset management See Finance Role.
- 10. Set the Customer options
- 11. Assign the default support Teams
- 12. Assign one or multiple SLAs, as required
- 13. Click Save

The Type Screen moves out of Edit mode.

14. Click the icon if the generic Item Category icon image is to be changed for the Item Type This icon is used as the visual representation of the Item Type in the Relationship Map.

| Browse No file selected. | Description | Upload Cancel |
|--------------------------|-------------|---------------|
| | | |

- 15. NOTE: The dimensions of the uploaded icon must be exactly 128 x 128 pixels
- 16. Move to the Classification tab to create classifications for issues related to Item of this Item Type.

1.37.2 SLAs and Item Types

When an Item Type is created with a defined SLA, any Item created using this Item Type automatically inherits the SLA. The lifecycle of a request raised against this Item is determined by the SLA milestones. However, it should be noted that the SLA can be adjusted within the Item if it is relevant to do so.

1.37.3 Classification

Category Classifications are used as generic problem classification for sorting requests. These are refined within the Item Type Classification to make them more relevant to the actual Item Type. For example, the Item Type category Hardware needs the Category Classification to be refined differently for hardware Item Types such as desktops and servers. To refine the problem types, Item Type Classifications are used.

| Type Information |
|-------------------------------------------------------------|
| Information Classifications Items Requests Fields Responses |

| Done |

Editing an Item Type Classification listing

To edit the Item Type Classification entry:

- 1. Within the Item Type>Classification tab
- 2. Select Edit

A New button is displayed within the Item Type Classification section.

3. Right-click on the Classifications link

The Create option is displayed.

| Item Type | | |
|-----------|----------------------|--|
| | - 🕼 Classifications | |
| Category | Create | |
| <u>لا</u> | Rename | |
| | Delete | |
| | 🟭 General (Default) | |
| | 🛺 Manuals | |
| | 🜆 Printing | |
| | 🛄 Setup/Installation | |

4. Select Create

A New node field is displayed in Edit mode.

5. Complete the details of the new list entry

| Item Type | |
|-----------|---------------------|
| | 🛓 🕼 Classifications |
| | 🛶 🛄 Account Details |

- 6. Click outside the text field to save the entry
- 7. To re-name an entry, highlight the field

| Item Type | | | |

| | 👍 📗 C | lassifications | |
| | L. 📕 | Account Details | |
| Category | | Create | |
| | à. 🔊 🗌 | Rename | |
| | | Delete | |

- Select the Rename option The field opens in edit mode
- 9. Change the details
- 10. Click outside the text field to save the changes
- 11. Repeat the above process to create all required list entries
- Move existing Classifications to a new position, if required Highlight the entry, then drag and drop the entry into its new location.
- 13. Click Save.

Creating Sub-Classifications

Classifications can be expanded to include sub-categories.

To create sub-classifications:

1. Select the relevant Classification header

The Classification header is highlighted.

| Item Type | |
|-----------|---------------------|
| | 🛓 🕼 Classifications |
| | 🜆 Account Details |

2. Right-click the Classification Entry

The Create, Rename and Delete options are displayed

| Item Type | | | |
|-----------|------|-----------------|--|
| | à. 🔊 | Classifications | |
| | L., | Account Details | |
| Category | | Create | |
| | à. 🎧 | Rename | |
| | - | Delete | |

- 3. Click Create
- 4. Complete the details of the new node

| Item Type | |
|-----------|---------------------|
| | 🔺 🌆 Classifications |
| | 🛓 🚛 Account Details |
| | - Mew node |

- 5. Click away from the text field to save the change
- 6. The above steps can be repeated until the Sub-Classification list is completed.

To move an existing entry to a new position, select the entry, then drag and drop the entry into its new location

1.37.4 Items

The Items tab lists the Items created using this Item Type. Individual Item details can be viewed by clicking on an Item Number. The list of Items can be exported using the Excel button.

| Type Information | ı | | | | | |
|------------------|-----------------|-------|--------------------|--------|-----------|---------------|
| Information | Classifications | Items | Requests | Fields | Responses | |
| Excel | | | | | | lphone 6 |
| | | | | | | Display: 10 💌 |

| | | | | | | | Done |

1.37.6 Costs

NOTE: This is only visible to Users with the Finance Role.

The Costs tab is only available within the Service Type Information screens and allows organizations to calculate the Break-Even Point (BEP) of a service based on forecasting the number of Customers of that Service. This allows the service organization to account for the per calendar month price of the Service, which is used to calculate the ongoing revenue figures within the Item Costs tab that uses the Service Type template.

| Information | lassific | ations | Items | Requests | | Costs | Fi | elds | Responses |
|----------------|----------|-------------|---------------|----------------|--------|---------------|-------------|------|--------------|
| Edit | | | | | | | | | Service Desi |
| Forecast Costs | | | | | | Actual Costs | | | |
| Capital | \$12,00 | 00.00 | | | | Capital | \$12,000.00 | | |
| Recovery | 5 year | s | | | | Recurring | 150.0 p.c.m | | |
| Recurring | 400.0 | p.c.m | | | | | | | |
| Services | | | | | | | | | |
| | SLA | Cost (p.a.) | Current Users | Forecast Users | B.E.P. | Price (p.c.m) | | | |
| | Gold | \$2,000.00 | 16 | 100 | \$6.00 | \$173.00 | | | |
| | | | | | | | | | Done |

| Forecast Costs | |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Capital | Enter the sum total to be invested in hardware and software infrastructure that will underpin the Service. |
| Recovery | Complete the field with the expected number of years designated to recover the costs of implementing the Service. |
| Recurring | Enter the proposed ongoing cost, on a per calendar month basis, for offering the Service. |
| Services | Using the details entered in the Costs fields and the cost per annum of the SLA, enter the forecast number of Customers/Users to calculate the break even point (B.E.P) of the Service. Using the auto-calculated B.E.P., enter a per calendar month Price for the Service to recover costs. This figure is used in the Service Item Costs tab to calculate the ongoing Revenue figures. |
| | NOTE: If an SLA with an Internal Cost is assigned to the Type, the B.E.P will be the SLA cost divided by 12 plus the cost of recovering the Capital expenditure over the number of years defined for the Capital to be recovered. For example, where the SLA cost is \$240 for the year, the B.E.P will never be less than \$20 per month. |
| Actual Costs | |
| Capital | Content for this field is derived from the Cost field within then Costs tab of the Item created using this Type. |
| Recurring | Content for this field is derived from the Monthly Cost field within the Costs tab of the Item created using this Type. |

1.37.7 Fields

Within the system, service organizations can refine custom fields made available during the request creation process based on the Item assigned to the request. In the Fields tab a User can create custom fields that apply to the Item Type. Therefore, when a request is logged against an Item that uses an Item Type with custom fields configured within the Fields tab, the Fields are made available within the Details tab of the request creation process.

These fields are in addition to the fields created by the Administrator within the Admin>Setup>Custom Fields, which are created for the specific Process, such as Incident, Problem, Change and Service Requests.

| Information | Classifications | Items | | Requests | Fi | elds | Resp | onses | |
|-----------------|-----------------|---------|------------|----------|----------|---------------------|----------------------|---------------|--|
| | | | | | | | | | |
| Field | Da | ta Type | Style | Active | Required | Customer Visible | Customer Editable | Default Value | |
| Access Enabled? | Bo | olean | Yes/No | 9 | | 9 | 9 | No | |
| Type Custom 2 | St | ing | Text | | | 9 | 9 | | |
| Type Custom 3 | St | ing | Text | | | a | v | | |
| Type Custom 4 | St | ing | Text | | | 0 | 2 | | |
| Type Custom 5 | Sti | ing | Text | | | a | v | | |
| | | | 1-5 of 5 R | esults | | | | | |

To create Field labels within the Type Information screen:

- 1. Click the Fields tab
- 2. Click Edit
- 3. Select a Field hyperlink

The Custom Field screen is displayed

| Type Information | | | | |
|-----------------------------|----------------|--------|-----------|----------------|
| Information Classifications | Items Requests | Fields | Responses | |
| | | | | Email Services |
| Custom Field | | | | |
| Field Label | Type Custom 2 | 0 | | |
| Category | ltem Type | | | |
| Active | Yes No | | | |
| | | | Cancel | Save |

- 4. Click Yes to activate the Field
- 5. Complete the following details:
- 6.

| Categories Fields | Description |
|-------------------|------------------------|
| Category | |
| Field Label | The name of the field. |

| Categories Fields | Description |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active | Indicates if the field is active. |
| Required | Indicates if the field is required or mandatory field. |
| Customer Visible | Defines if the Customer can see the field within the |
| | Customer Portal. |
| | If Yes is selected, define if the Customer can edit the field information on the Customer Portal. |
| Data Type | Dictates the field's Data Type. The options available include : |
| | String - List or Free Text |
| | Number |
| | Boolean - radio buttons for Yes/No and True/ False |
| | Date - creates a date field |
| | Currency- creates a currency field |
| | Hyperlink. |
| Style | States the style of the field. |
| | eg. String- List or Free Text field. SeeLists for more information on creating a list field type. |
| Unique Value | When active, the system prevents the duplication of data within the customized field. |
| Default Value | Value entered is the default system entry for the field, when the field is not completed manually. |
| Input Validation | When enabled the Input Mask and User Mask can be defined. |
| | <i>Input Mask</i> : A regular expression to use for data validation of values entered by a User (i.e., Zip/Post Code, telephone no.) |
| | <i>User Mask</i> : A User Friendly representation of the Input Mask that Customers can understand should i appear in a validation error message. |
| Enable Description | When enabled a Description field appears, allowing the User to enter details of what information is the field is expected to capture. These details are accessible next to the custom field on the relevant screen. |

7. Click Save.

The active Field will now be available during the request creation process, for all Items that use the Item Type.

| quest Informa | | | | | |
|----------------|---------------------------|------------|---------------------------------------------------|------------------------|------------------------------|
| Customer | Details | | | | |

| | Path: | | | Words: 0 | Done |

1.37.8 Responses

The Responses tab within an Item Type displays the templates configured within the Item Category>Response tab, which can be used as content for Notes sent for requests received against the Item Category. In addition to saving time for customer responses that are sent on a regular basis, these ensure the service desk responds to issues in a consistent manner, in line with the support organization's policies and protocol. Within the Types>Responses tab, additional Note templates can be configured, that will only be available for requests logged against that Item Type.

The following screen displays a list of default template options available within the Notes tab of a request:

| Note Time + 🗘 0 (M | Minutes) 03/27/12 15:06 | | Select a template | • |
|------------------------------------------------------------------------------------------------------------------------------------------|----------------------------|--------------------|-------------------|--------|

| | | |
| | | |
| | | |
| | Path: p Words:0 | |
| | | |
| | Cancel | Save |

- 4. Enter the Template Title
- 5. Complete the content for the Note, inserting any relevant parameters
- 6. Click Save.

Removing a Template

Within the Types>Response tab, only templates created for the Item Type can be deleted. Templates created at the Category level must be deleted within the Category>Responses tab.

To delete a template within an Item Type:

- 1. Go to the Responses tab
- 2. Click Edit
- 3. Check the box in the column next to the template Title

| Add Remove | |
|------------------|-------------------|
| 🔯 Title | <u>≜</u> Category |
| R1 | Ø |
| Request Log File | Ø |
| | 1-2 of 2 Results |
| | Cancel Save |

4. Click

| Remove | |

5. Click Save.

1.38 Create a Manufacturer

Manufacturers are created and assigned to an Item Type to establish the distributor of the Type.

1.38.1 Creating a New Manufacturer

To create a new Manufacturer when creating a new Item Type:

- 1. Leave the Manufacturer field blank
- 2. Click the 😨 button
- 3. Enter the Manufacturer name as well as any other details
- 4. Click Save.

The screen will return back to the Item Type Information window and display a confirmation that the Manufacturer has been created successfully.

1.38.2 Editing a Manufacturer

Existing Manufacturers can be modified within the Item Type screen.

To edit a Manufacturer:

- 1. Select the Manufacturer from the list provided
- 2. Select 🗱 to open the Manufacturer information screen in Edit mode

The system will inform the User that any changes made to the Manufacturer will undo any unsaved Item Type changes. Click OK to continue.

| Manufacturer I | Editor | |
|----------------|------------------|------------|
| Details | Турез | |
| | | My Company |
| Details | | |
| Manufacturer | My Company | |
| Short Name | New Manufacturer | |
| Address | | |
| City | | |
| Zip | | |
| Country | • | |
| Phone | | |
| Fax | | |
| URL | | |
| | Delete Cancel | Save |

- 3. Make the required changes
- 4. Click Save

The screen returns to the Item Type screen.

Click Save and Done.
 The screen reverts to the Item Type list view.

1.39 Items

| 🛆 Home | Operations | [⁄/] Change | | () Service | <u> ႔</u> User | 🗐 Knowledge | 🗟 Reports | E Finance |
|--------------------|---------------------|----------------------|-----------|------------|----------------|-------------|-----------|-----------|
| Items Types Catego | ries Vendors Manufa | cturers Outages AMIE | Snapshots | | | | | |

Configuration Items within the system are referred to as Items. Items have multiple connections with other elements throughout the application, these may include Customers, Organizational Units and Service Level Agreements. The table below outlines how Items interact with other system elements:

| Element | Relationship |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Customers | Each Item must be assigned to one or more Customers who are the Owners of the Item. This Customer may be Everyone, making the Item a Global Item. Only Item Owners are able to raise requests against an Item. See Creating Items. |
| Service Level Agreements (SLAs) | Service Level Agreements can be linked as follows: |
| | Per Item |
| | Per Customer |
| | Per Request |
| | Per Organizational Unit. |
| Teams | Within Item Types, Default Teams are assigned to Items. When requests are raised for an Item, they will be assigned to the Default Team. |
| Technicians | Technicians can be associated with Skills based on Items, Item Types and Classifications. When a request is raised with the combination of Item Type and issue Classification, it is assigned to that Technician. SeeClassification Tab. |
| Outages | Where states in the Lifecycle of an Item Type are defined as Off-line, when an Item is in an Off-line state, it will appear in the Outages page. See Categories LifeCycle. |

An Item record consists of the following attributes:

- Information Tab
- Details Tab
- Costs Tab
- Requests Tab
- Relationships Tab
- Outages.

Options available within the Items screen include:

- New Create an Item
- Search Search for an Item
- Bulk Allows the User to update details of multiple Items in a single screen.

Filter views that are available within the Configuration>Items screen include:

| Filter | Relationship |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------|
| All Items | All Items stored within the CMDB, regardless of the assigned Lifecycle State. |
| Hardware Catalog | All Items that use the Hardware Category Template stored within the CMDB, regardless of the assigned Lifecycle State. |
| Service Catalog | All Items that use the Service Category Template stored within the CMDB that are in an active Lifecycle State. |
| Service Pipeline | All Items that use the Service Category Template stored within the CMDB that are assigned a Pre- production Lifecycle State. |
| Service Portfolio | All Items that use the Service Category Template stored within the CMDB, regardless of the assigned Lifecycle State. |
| Software Catalog | All Items that use the Software Category Template stored within the CMDB, regardless of the assigned Lifecycle State. |

1.39.1 View an Item

Within the Item sub-menu option, Users can view a list of Items created within the system. To view the details of an Item, select the Item Number hyperlink and the Item Information screen is displayed. The Item Information screen includes tabs for the following information:

- Attribute details
- Relevant costs
- Requests created against the Item
- · Relationships associated with the Item
- Planned Outages associated with the Item..

1.40 Creating an Item

1.40.1 Creating an Item during request creation

To create a new Item for the Customer after they have been assigned to the request:

1. Move to the Find Item field

| Find Item | | | |
|---------------------------------------|---|--------------|--------------------|
| | | | |
| Item Number | | Item Type | |
| | | | |
| Include Global* Items | | C All Items | |
| Active Items Only | | All Assigned | d Items |

| Criticality | | | | | |
| Service Level | | • | | | |
| Ownership | | | | | |
| | Everybody | | Find Cus | tomer (Last Name) | 0 |
| Org. Units | All | | Find Org. | Unit (Name) | ۲ |
| Affects | 13 Users | | | | |
| | | | | Cancel | Next |

- 3. Enter the Item Type Name in the Find field, or leave empty and click Q
- 4. Select the Item Type hyperlink to assign the details to the new Item
- 5. Enter other required information
- 6. Click Next

The Item Details tab is displayed.

- 7. Enter any known Item details
- 8. Select Save.

The Item details are saved, select Next to complete the request creation process.

NOTE: This option is only available to Technicians if the system Administrator has enabled the Create Items option within the Setup>Privileges>User screen of the application.

1.40.2 Item Information

Item information allows the User to configure the basic information for the Item, most of which is prepopulated based on the Item Type selected for the Item. Within this screen the owners of the Item are also assigned.

To create an Item:

- 1. Select Configuration > Items
- 2. Click New

The Item Information screen appears.

| Item Information | | | | | | | |
|--------------------|-----------|-------|----------|---------------|------------------------|--------------|-----|
| Information | Details | Costs | Requests | Relationships | 5 Outages | AMIE Snapsho | ots |

| Item | Description |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item Number* | If the Administrator has set the Item Numbers Editable option in Setup> Privileges> System to Yes, the User will have the option of entering a customized Item number. It may contain numbers and/or letters, and be between 1 and 64 characters in length. |
| | As no two Item Numbers can be the same, the User will be prompted to change the value they have entered if it is already in use. If the Item Number field is left blank, the system will automatically create an Item Number. |
| | If the Administrator has set the Item Numbers Editable option to No, an Item Number will be generated automatically and cannot be edited. |
| Category* | This is auto-filled, based on the assigned Item Type. |
| Type* | This is the Item Type that the Item represents. Click the Search button to view the list of available Item Types. |
| Team* | This is the Technician Team that will be assigned to support the Item. |
| Status* | Select the status from the drop-down options displayed after the Item Type has been assigned. |
| Criticality* | Rates the degree of importance of an Item Type within an organization. The 'Impact' of a request is initially pulled from the Criticality of the Item, but can be adjusted within the request Information screen if required. Requests logged through the Customer Portal, use the Criticality of the Item to determine the Priority of the request. (See additional information below.) |
| Service Level | Select the Service Level Agreement from the drop- down list, if required. |
| Ownership | |
| Customers | These are the Customers who own the Item. A single Customer, a group of Customers or all Customers in the application can be assigned to an Item. |
| | Enter a Customer last name, or leave blank then click the Search button to view a list of all available Customers. |
| | Click on the hyperlink for the relevant Customer name or names to assign them to the Item. |
| | If no specific Customer is allocated to the Item, it becomes a Global Item and is assigned to Everyone. |

| Item | Description |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Org Units | These are the Org Units who own the Item. The Item can be assigned to one or multiple Organizational Units. |
| | To assign an Org Unit: |
| | Enter an Org Unit name, or leave blank then click the Search button to view a list of available Org Units. |
| | Click on the hyperlink for the relevant Org Unit name or names to assign them to the Item. |
| | 3. NOTE: If Billing is enabled an owner must be assigned to the Item. The owner can be either a Customer or an Org Unit, but only Org Units that have a Primary Contact, will be displayed in the Org Unit Search list. (See: Primary Contact.) |
| Notification | |
| Method | This field is visible when an active Item moves into an offline State and allows the User to define who (Primary Contact or All Owners of the Item) and how (Email or SMS), Customers will be notified that the Item is not available. |

*Denotes mandatory fields

- 4. Search and select an Item Type
- 5. Select a support Team for each process
- 6. Select the Item's Status and Criticality
- 7. Assign a Service Level

If Contracts are enabled for the system, the assignment of an SLA will result in an annual service contract automatically being applied to the Item. If an SLA is not assigned, a Contract can be created for the Item within the Costs tab.

- 8. Search and select a Customer and/or an Organizational Unit owner
- 9. Click Next to view the Details tab.

Item Criticality

The Item Criticality is used to identify the degree of importance of an Item to an Organization.

When the Incident Priority is set to Derived in the Administrator Setup, the Impact of a request is mapped from the Criticality of the Item associated with the request and then combined with the selected Urgency, which derives the Priority of the request. If required, the Impact can be manually adjusted within the request Information screen. Requests logged through the Customer Portal, use the Criticality of the Item to determine the Priority of the request, which can be manually adjusted by the Technician User.

The following table displays the calculations applied by the system to the Item Criticality, which is mapped to a request's Impact to determine a request's Priority:

| Impact / Urgency | Urgent | High | Moderate | Low | Very Low |
|------------------|--------|-------|----------|-------|----------|
| Critical | 1.000 | 0.850 | 0.700 | 0.550 | 0.410 |
| High | 0.850 | 0.723 | 0.595 | 0.468 | 0.349 |
| Moderate | 0.700 | 0.595 | 0.490 | 0.385 | 0.287 |
| Low | 0.550 | 0.468 | 0.385 | 0.303 | 0.226 |
| Very Low | 0.410 | 0.349 | 0.287 | 0.226 | 0.168 |
| | | | | | |

The above calculations result in the following Priorities:

| Priority | Upper | Lower |
|----------|-------|-------|
| Urgent | 1 | 0.83 |
| High | 0.83 | 0.58 |
| Medium | 0.58 | 0.34 |
| Low | 0.34 | 0 |

The Incident Analyzer, if enabled by the Administrator in Setup>CMS>Incident Analyzer, can apply the Criticality to automatically detect Problems. The minimum Criticality level can also be used to determine the off-line Items that appear on Outages pages, if the Outages pages are enabled by the Administrator in Setup>Privileges>System.

Create an Item with Contracts Enabled

When Contracts are enabled with Billing, Items, Customers and Organizational Units can be linked together using a service contract. To automatically apply the system default support contract when creating an Item, simply select an SLA and an annual contract is applied. However, if an SLA is not required but a service contract is, the contract can be created within the Costs tab of the Item. See:Costs Tab.

1.40.3 Details

Once the basic information for an Item has been completed, additional details can be defined for the Item. The Details tab displays a list of custom fields set for the Item's Category. The information to be completed within this section is configured by the Supervisor when customizing the Item Type templates in Configuration > Categories. Fields marked as Required, must be completed for the Item Details of the Item to be saved successfully.

For more information about Item custom fields, see: Categories.

| Item Information | | | |
|------------------|------------------------------------------------|------------------|------------------------------------|
| Information | Details Costs Re | quests Relations | hips Outages AMIE Snapshots |
| Edit | Duplicate 吕 Print | | Item # Service Desk (Service Desk) |

| Туре | | Date Activated | |
| Environment | | Contact | |
| | Descr | iption Notes | Attachments Audit Trail |
| Description | Description entered here is displayed in the c | ustomer portal. | |
| | | | Done |

Clicking Save at the far bottom of the page after the Details tab has been completed, will create the Item and save it to the database.

NOTE: Items can be duplicated at any time by clicking the Duplicate button. A new Item is created with properties that are identical to the original Item (with the exception of the Item Number, as this must be unique and is generated automatically).

Item Description

Content entered in the Description field is made available on the Customer Portal in the expanded information window for an Item. For Service Items, where a description of the Service may be required within the Customer Portal, details about the Service can be completed within the Item Description field. The Item and Service information can be expanded by completing Item attribute fields that are marked as Customer Visible and therefore displayed in the Customer Portal.

To add an Item Description, within the Item's Details tab:

- 1. Click Edit
- 2. Move to the Description tab
- 3. Add information in the Description field

| | Description Notes | Attachments Audit Trail |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|

5. Click Save.

The Note will be allocated an identification number hyperlink for access. It will also be time and date-stamped.

Item Attachments

To add Attachments to an Item, within the Item's Details tab:

- 1. Click Edit to display the Attachment tab New button
- 2. Click New

| | Description | Notes Attachments Audit Trail | |
|--------------------------|-----------------------|-------------------------------|--|
| Browse No file selected. | Private 🔽 Description | Upload Cancel | |
| | | Delete Cancel Save | |

- 3. Browse and select a file
- 4. Enter a Description, if required
- 5. Adjust Private and Public option, if relevant

Selecting Public will make it accessible on the Customer Portal, when the Item is in a Customer Visible state.

6. Click Upload

Item Outages

Planned outages can be created for an Item under the Outages tab. This is a period of time an Item will not be available for a Customer's use.

If an Item has an SLA with a specified Blackout Period, Outages should be planned to fall within this time. The Blackout Period is an agreement between the Customer and the Service Desk regarding a period of time when the Customer has no service expectations. This can also be the preferred time for Item upgrades and maintenance without affecting service availability.

When an Outage is being created, the Blackout Periods times are displayed to ensure the User creates a new Outage that does not breach the Item's SLA.

Creating an Outage

To create an Outage:

- 1. Select Configuration > Items
- 2. Select the Item Number
- 3. Go to the Details tab
- 4. Click Edit
- 5. Go to the Outages tab

| Item | n Information | | | | | | |
|------|---------------|------------|----------|-----------|---------------|---------------|--------------------|
| | Information | Details | Costs | Requests | Relationships | Outages | AMIE Snapshots |
| | New | | | | | Item Number 1 | 000 (WIFI Service) |
| No. | E Start Date | 🛓 End Date | Reason | | Ву | | = |
| | | | 0 - 0 of | 0 Results | | | |
| | | | | | | Cancel | Save |

6. Click New

| Item Information | | |
|------------------|---------------------------------------------------------|-------|
| Information D | Details Costs Requests Relationships Outages AMIE Snaps | shots |
| Details | | |
| Interval | One Time | |
| Start Date | | |
| End Date | | |
| Notification | None | |

| Online Status | Deployed 💌 | |
| Reason | | |
| | | |
| | | |
| | | |
| | | |
| | li. | |
| | Cancel Save | |

The screen will expand to display the Outage Editor screen including the Blackout Period, if defined for the Item associated SLA. Within the table the start and end time is displayed as Local Time and Actual Time:

- · Local Time is based on the time zone of the logged in User
- Actual Time is based on the SLA time zone.
- 7. Define the Interval for the Outage

Select One Time if the Outage is a one off, or set regular outages based on a weekly or monthly basis.

8. Enter the Outage details

Select the Start/End Date within the calendar, and modify the Time accordingly inside the calendar pop-up.

- 9. Set the Notification method and recipients, for when the Outage is saved.
- 10. Tick the Reminder Email field, if a reminder is to be emailed to defined recipients prior to the Outage time
- 11. Define the length of time before the Outage occurs that the reminder is to be sent

| Notification | Email 💌 | Primary Contacts |
|--------------|----------|------------------|
| Reminder | 24 hours | ▼ before outage. |

- 12. Complete the Reason for the Outage
- 13. Click Save.

The Outage notification is sent to the defined recipients upon save.

See Outages for more information on setting up and viewing Item Outages.

Item Audit Trail

The Audit Trail tab records all changes that are made to fields within the Item Information and Details screens. These entries are made to record all the alterations made to Items and the CMDB.

To view an audit trail entry, under the Item Details tab:

- 1. Select the Audit Trail tab
- 2. Click on the identification number hyperlink to display the entry details.

| | | Description Notes | Attachments | Audit Trail |
|-----|----------------|-------------------------------------------------------|-------------|-------------|
| No. | Date | F Event | By 🔳 | <u>e</u> |
| 89 | 01/05/16 14:57 | Relationship created. Service Desk #Service Desk i | Sankar R | |
| 82 | 01/05/16 12:33 | Warranty Date changed from '16 Jan 2016' to '5 Feb | Sankar R | |
| 81 | 01/05/16 12:33 | Warranty Date set to '16 Jan 2016' | | |
| 72 | 01/05/16 11:42 | Added 'James Stewart' as an owner of this item | Kamal K | |
| 51 | 12/10/15 04:59 | Item Number changed from '100002' to 'Service Desk | Sankar R | |
| | | 1 - 5 of 5 Results | | |
| | | Delete | Cancel | Save |

Rollback Option

All changes recorded in the Audit Trail can be rolled back to reinstate information recorded against an Item.

To return to Item details to previously saved information:

- 1. Click Edit
- 2. Select the identification number hyperlink of the entry to be reversed
- 3. Click the Rollback button
- 4. Save the Item.

The Item details will revert to information recorded before an update was made.

1.40.4 Costs

For Users who are not assigned the Finance Role, the Costs Tab displays SLA Details and Item Availability information. Users who are assigned the Finance Role, also have access to the Item's financial and contractual details. The following Item Costs details include:

- Base cost
- · Purchase date and related information
- Depreciation data
- Inherited costs
- SLA and Contract details
- · Availability statistics.

Completing the Depreciate Over field causes the application to automatically keep track of the Item depreciation over the specified number of years. The current value of the Item after depreciation is displayed at Depreciated Value. The Audit Date field is used to record the date when the Item was last audited.

For Service Items see: Service Item Costs Tab

| Information | | | | |
|--------------------------|----------------|-------|------------------------|--------------------|
| Information | Details | Costs | Requests Relationships | |
| Edit | Duplicate | Print | | ltem # 100005 (Ser |
| Financial | | | SLA Details | |
| Cost | \$0.00 | | Service Level Warranty | |
| Monthly Cost | \$0.00 | | | |
| Purchase Date | 08/01/10 19:03 | | Warranty | |
| Depreciate Over | years | | Expires | |
| Depreciated Value | \$0.00 | | Availability | |
| Audit Date (mm/dd/yy) | | | Avg Repair Time N/A | |
| PO Number | | | Avg Time To Fail N/A | |
| Inherited Costs | | | | |
| Inherited Capital | | | | |
| Inherited Ongoing | | | | |
| Delegate Costs | Yes No | | | |
| | | | | Done |

The Financial Costs and Inherited Costs fields allow the support organization to assign costs across related Items and charge Users and/or Organizational Units appropriately.

| Financial | Description |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cost | The financial investment made to purchase the Item. This figure is also used when the Delegate Costs is enabled for allocating costs across related Items. |
| Monthly Cost | The amount invested on a monthly basis to maintain the running of an Item. This figure is also used when the Delegate Costs option is enabled for allocating costs across related Items. |
| Purchase Date | The date the Item was purchased. |
| Depreciate Over | Enter the number of years the Item is to be depreciated over, if required. |
| Depreciated Value | The system calculates the current value of the Item based on the Purchase Date and the number of years the Item is to be Depreciated Over. |
| Audit Date | Set the date the Item is next to be audited. |
| PO Number | If Purchase Orders are enabled for the system, the field is visible and automatically populated with the PO number generated by a User within the Finance>Purchase Orders tab, when the Item order was recorded in the system. |
| Inherited Costs | |

| Financial | Description |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Inherited Capital | Total infrastructure costs of parent CI's that directly contribute to the cost of the current CI. This figure is derived from all the Cost fields within the Item Information>Costs tab of related Parent Items. |
| Inherited Ongoing | Running costs of all associated Items that enable the current CI to continue to function. This figure is derived from all the Monthly Cost fields within the Item Information>Costs tab of related Parent Items. |
| Delegate Costs | To enable cost delegation across the relationship map allowing associated Items to inherit the costs of the current CI, select Yes. This will take the figures from the Cost and Monthly Cost fields for the Item and spread them across related Child Items. |
| | Define the technique to be used to evaluate the cost split: |
| | Child Count:Costs are split by percentage based on the number of child CI's the costs are being delegated across. |
| | User Count:Costs are split proportionally based on the number of users of the child CI's the costs are being delegated across. |
| | <i>Custom %</i> : The relationship itself allows for the % cost to be assigned |

The figures displayed within the Availability fields are automatically calculated by the application, using the Item Lifecycle as it moves between online and offline States:

| Availability | |
|------------------|--------------------------------------------------------------------------------------------------------------|
| Avg Repair Time | Entries displayed here are automatically calculated based on the average length of time an Item is offline. |
| Avg Time To Fail | Figures displayed here are automatically calculated based on the average time between an Item being offline. |

Billing Enabled

When Billing is enabled, a Service Level hyperlink is available within the Costs screen. This provides access to the Service Level Agreement details that govern the lifecycle for Requests logged against the Item.

| tem Information | | | | | |

| | | | | | Done |

If Invoices are also enabled, an Invoice Number hyperlink is available and when selected, will display the invoice details for the Contract that covers the Item. The Start Date and End Dates stipulate the contract length covered for the Item. It is summarized by the days or hours recorded in the Expires field.

The Contract tab within the Item Information Costs tab summarizes the contract details that cover the Item. Further Contract details can be found within the relevant Contract Number within the Finance>Invoices screen.

Create a Contract

Through the Item Costs tab, Contracts with an associated Invoice Number (if relevant) can be generated for an Item, after it has been logged in the system.

To add a Contract to an Item, within the Configuration>Item screen:

- 1. Select the Item Number
- 2. Move to the Costs tab

The Contracts tab is visible in the bottom right corner of the screen

3. Click Edit

The Add and Delete buttons are made available within the Contracts tab

| | | | | | | Contracts |
|--------------------|--------|-----|----------------|----------|--------|-----------|
| Contract # | च Туре | SLA | ≣ Start Date | End Date | ≣ | Add |
| 0 - 0 of 0 Results | | |) of 0 Results | | | Delete |
| | | | | Delete | Cancel | Save |

4. Click Add

(If Invoices are enabled in the system, an Invoice number will be automatically generated and assigned to the Contract).

| | Urgent | 6 Hours | 12 Hours | 24 Hours | Yes | None |
| | High | 12 Hours | 24 Hours | 48 Hours | Yes | None |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None |
| Contract Type | Per Item | | | | | |
| Time | Subscription | - | | | | |
| | Subscription | | | | | |
| Start Date | Time Limited | | | | | |
| End Date | Support Hour Support Hour | | | | | |
| Notes | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| Price | | | | | | |
| | \$0.00 | | | | | |
| | | | | | | |
| Total Cost | \$0.00 | | | | | |
| | | | | | | Cancel |

6. Assign the Time period to be covered by the Contract:

If *Subscription* is selected, the Start and End Dates are automatically completed by the system, but can be edited if required.

If *Time Limited Subscription* is selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually, entering the length of time for the subscription period.

If *Support Hours* is selected, the number of support hours purchased by the Customers should be entered.

If *Support Hours by Month* is selected, set the number of hours purchased per month and define which day of the month contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

- 7. Add any relevant Invoice Notes
- 8. Check the Taxable box, if the Contract is to be taxed
- 9. Click Save.

If Invoices are enabled in the system, an Invoice number will be automatically generated for the Contract and made available within Finance>Invoices. Payment will need to be processed by a Finance User before the Contract can be enabled in the system. If invoice payment is required before the contract can be enabled in the system the following Warning message is displayed:

10. Click Next

The Contracts information is only populated after the Invoice has been processed. To process the Invoice, as a Finance User move to the Finance>Invoices tab. Once the relevant Invoice payment has been processed the Contract details will be visible in the Costs >Contracts tab.

1.40.6 Item Relationships

This Relationship Tab allows Users to view and/or create a Relationship Map for the current Item, with other Items within the CMDB.

The Relationship direction can be defined as:

- Service Oriented Parent-Child Relationship
- · Component Oriented Child-Parent Relationship.

Within each view the Relationship Class can be defined as:

- Hierarchical Relationship
- Connection an association between the selected Items.

For a Service, such as the Email or Web Site Service, it is recommended that the Hardware be defined as the Parent for the Software Items and the Software be defined as the Parent of the Email or Web Site Service.

Create a Relationship

To create a new Item Relationship:

- 1. Select Configuration>Items
- 2. Select an Item
- 3. Select the Item's Relationship tab
- 4. Click Edit
- 5. Click New
- 6. Select the Relationship Direction and Class from the drop-down menus
- 7. Define the Relationship by selecting a description from the drop-down list

| Item Information | | | | | | | |
|------------------|----------------------------|----------------|------------|-------------|------------|-------------------|----------------------|
| Information | Details | Costs | Req | uests Relat | ionships | Outages | AMIE Snapshots |
| 日 Print | | | | | Item # Mic | rofocus - Intrane | t (Website Services) |
| Direction | Parent - Child | | • | | | | |
| Туре | | • | • | | | | |
| Related Item | Hierarchical Connection | | | | | | |
| | Item Number | ltem | Туре | Org. Unit | | | |
| | | | | | | • | |
| | Item # | Item Type | Identifier | Status | ≣ | | |
| | jdk-7u60- windows-x64 | Windows Bundle | e | Installed | | | |
| | Wordweb7 | Windows Bundle | e | Installed | | | |
| | Firefox 1.0 | Windows Bundle | e | Installed | | | |

- 8. NOTE: If the Relationship Type has the Inherit Parent Ownership option enabled, Child Items that use this relationship will inherit the Parent Item's owners. The ownership will not be editable and no other Parent Item can be assigned to the Child Item. A warning will be displayed if a relationship type has the Inherit Parent Ownership option enabled.
- 9. Use the Find Item field to locate the relevant Item
- 10. Click on the Item Number hyperlink to create the Relationship
- 11. Click Save to default to the Relationship Map view.

Relationship Map

Within the Relationships tab of the Item Information screen, a Relationship Map visually displays the connections that have been defined for an Item. All Item Relationships are listed in the Relationships Table beneath the Map. The Relationship Map can display up to 48 Child Items and 16 Parent Items in the one diagram.

The central icon of a Map is a visual representation of the selected Item. Scroll over an Item label to view any information recorded on the Information and Details tabs of the Item. To drill-down through the relationships, click on an Item label. To change the focus of the Relationship Map to another Item, click on the Item label and the system will request that OK be selected before updating the central node of the Map.

The Relationship Table data displayed at the base of the map can be filtered using the Direction filter view of Parent-Child or Child-Parent.

The map displays the relationship between each Lifecycle State by using different colors to represent the type of Lifecycle State.

| Color | | | | |
|---------------|-------------------------------------------------|--|--|--|
| Green Circle | CI is assigned an online status. | | | |
| Red Square | CI is assigned an offline status. | | | |
| Blue Triangle | Service CI is assigned a pre-production status. | | | |

The Lifecycle State name can be accessed by scrolling over the Item icon within the Map.

To delete a Relationship:

To remove the Relationship between Items:

- 1. Select the relevant Item within the Configuration tab
- 2. Move to the Relationships tab
- 3. Click Edit
- 4. Select Delete

A table with the Relationship details is displayed.

| Item Information | | | | | |
|------------------|----------------|----------------|----------------------------------|---------------|-----------------------|
| Information | Details | Costs | Requests Relationships | Outages | AMIE Snapshots |

| | Service Desk | is a child of | Windows Microsoft Bundle 2010 | | Service |
| | | | 1 - 1 of 1 Results | | |
| | | | | Cancel | Delete |

- 5. Select the Relationship Direction to display the relevant Relationship table
- 6. Mark the checkbox next to the Relationship that is to be removed
- 7. Select Delete
- 8. Click Done to return to the Item list.

Users can view and create relationship maps for current Item with other Items within the CMDB within the Relationships tab to define the infrastructure that underpins Services within the Service Catalog. For more information about creating a Service catalog and relationship mapping, see: Service catalog.

AMIE Item Imports and Relationships

Items with Item relationships that have been imported using the AMIE engine, retain the relationships that exist within the Asset Management Tool. A visible map of the relationships is recorded within the Relationships tab.

1.41 Create an Item

When an Item is created within the system it takes the generic settings of an Item Type and binds them to a Customer or Customers and/or Organizational Unit. The Item information uses the details defined in the Item Type template, however these can be adjusted to suit the requirements of the specific Item.

To create an Item:

- 1. Select Configuration > Items
- 2. Click New

The Item Information screen appears

| Item Information | | | | | | |
|------------------|-----------|-------|----------|---------------|--------------------|----------------|
| Information | Details | Costs | Requests | Relationships | Outages | AMIE Snapshots |
| Number | | | | | | |

| Org. Units | All | | | Find | Org. Unit (Name) | ٩ |
| Affects | 13 Users | | | | Cancel | Next |

*Denotes mandatory fields. 3.

| Item | Description |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item Number* | If the Administrator has set the Item Numbers Editable option in Setup> Privileges> System to Yes, the User will have the option of entering a customized Item number. It may contain numbers and/or letters, and be between 1 and 64 characters in length. |
| | As no two Item Numbers can be the same, the User will be prompted to change the value they have entered if it is already in use. If the Item Number field is left blank, the system will automatically create an Item Number. |
| | If the Administrator has set the Item Numbers Editable option to No, an Item Number will be generated automatically and cannot be edited. |
| Category* | This is auto-filled, based on the assigned Item Type. |
| Type* | This is the Item Type that the Item represents. Click the Search button to view the list of available Item Types. |
| Team* | This is the Technician Team that will be assigned to support the Item. |
| Status* | Select the status from the drop-down options displayed after the Item Type has been assigned. |

| Item | Description |
|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Criticality* | Rates the degree of importance of an Item Type within an organization. The 'Impact' of a request is initially pulled from the Criticality of the Item, but can be adjusted within the request Information screen if required. Requests logged through the Customer Portal, use the Criticality of the Item to determine the Priority of the request. (See additional information below.) |
| Service Level | Select the Service Level Agreement from the drop- down list, if required. |
| Ownership | |
| Customers | These are the Customers who own the Item. A single Customer, a group of Customers or all Customers in the application can be assigned to an Item. 1. Enter a Customer last name, or leave blank |
| | then click the Search button to view a list of all available Customers. |
| | Click on the hyperlink for the relevant Customer name or names to assign them to the Item. |
| | If no specific Customer is allocated to the Item, it becomes a Global Item and is assigned to Everyone. |
| Org Units | These are the Org Units who own the Item. The Item can be assigned to one or multiple Organizational Units. |
| | To assign an Org Unit: |
| | Enter an Org Unit name, or leave blank then click the Search button to view a list of available Org Units. |
| | Click on the hyperlink for the relevant Org Unit name or names to assign them to the Item. |
| | 3. NOTE: If Billing is enabled an owner must be assigned to the Item. The owner can be either a Customer or an Org Unit, but only Org Units that have a Primary Contact, will be displayed in the Org Unit Search list. (See: Primary Contact.) |
| Notification | |
| Method | This field is visible when an active Item moves into an offline State and allows the User to define who (Primary Contact or All Owners of the Item) and how (Email or SMS), Customers will be notified that the Item is not available. |

4. Search and select an Item Type

5. Define a support Team for each process

6. Select the Item's Status and Criticality

(Refer below for further details about Item Criticality.)

7. Assign a Service Level

If Contracts are enabled for the system, the assignment of an SLA will result in an annual service contract automatically being applied to the Item. If an SLA is not assigned, a Contract can be created for the Item within the Costs tab.

- 8. Search and select a Customer and/or an Organizational Unit owner
- 9. Click Next to view the Details tab

1.41.1 Item Criticality

The Item Criticality is used to identify the degree of importance of an Item to an Organization.

When the Incident Priority is set to Derived in the Administrator Setup, the Impact of a request is mapped from the Criticality of the Item associated with the request and then combined with the selected Urgency, which derives the Priority of the request. If required, the Impact can be manually adjusted within the request Information screen. Requests logged through the Customer Portal, use the Criticality of the Item to determine the Priority of the request, which can be manually adjusted by the Technician User.

The following table displays the calculations applied by the system to the Item Criticality, which is mapped to a request's Impact to determine a request's Priority:

| Impact / Urgency | Urgent | High | Moderate | Low | Very Low |
|------------------|--------|-------|----------|-------|----------|
| Critical | 1.000 | 0.850 | 0.700 | 0.550 | 0.410 |
| High | 0.850 | 0.723 | 0.595 | 0.468 | 0.349 |
| Moderate | 0.700 | 0.595 | 0.490 | 0.385 | 0.287 |
| Low | 0.550 | 0.468 | 0.385 | 0.303 | 0.226 |
| Very Low | 0.410 | 0.349 | 0.287 | 0.226 | 0.168 |
| | | | | | |

The above calculations result in the following Priorities:

| Priority | Upper | Lower |
|----------|-------|-------|
| Urgent | 1 | 0.83 |
| High | 0.83 | 0.58 |
| Medium | 0.58 | 0.34 |
| Low | 0.34 | 0 |

The Incident Analyzer, if enabled by the Administrator in Setup>CMS>Incident Analyzer, can apply the Criticality to automatically detect Problems. The minimum Criticality level can also be used to determine which off-line Items are displayed on the Outages pages, when the Outages pages are enabled by the Administrator in Setup>Privileges>System.

1.42 Costs Tab

For Users who are not assigned the Finance Role, the Costs Tab displays SLA Details and Item Availability information. Users who are assigned the Finance Role, also have access to the Item's financial and contractual details. The following Item Costs details include:

Base cost

- Purchase date and related information
- Depreciation data
- Inherited costs
- SLA and Contract details
- Availability statistics.

Completing the Depreciate Over field causes the application to automatically keep track of the Item depreciation over the specified number of years. The current value of the Item after depreciation is displayed at Depreciated Value. The Audit Date field is used to record the date when the Item was last audited.

For Service Items see: Service Item Costs Tab

| Information | Details Costs | Requests Relationships | |
|--------------------------|----------------|------------------------|--------------------|
| Edit | Duplicate | | Item # 100005 (Ser |
| Financial | | SLA Details | |
| Cost | \$0.00 | Service Level Warranty | |
| Monthly Cost | \$0.00 | | |
| Purchase Date | 08/01/10 19:03 | Warranty | |
| Depreciate Over | years | Expires | |
| Depreciated Value | \$0.00 | Availability | |
| Audit Date (mm/dd/yy) | | Avg Repair Time N/A | |
| PO Number | | Avg Time To Fail N/A | |
| Inherited Costs | | | |
| Inherited Capital | | | |
| Inherited Ongoing | | | |
| Delegate Costs | Yes No | | |
| 2 | 0100 0110 | | |

The Financial Costs and Inherited Costs fields allow the support organization to assign costs across related Items and charge Users and/or Organizational Units appropriately.

| Financial | Description | | | |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Cost | The financial investment made to purchase the Item. This figure is also used when the Delegate Costs is enabled for allocating costs across related Items. | | | |
| Monthly Cost | The amount invested on a monthly basis to maintain the running of an Item. This figure is also used when the Delegate Costs option is enabled for allocating costs across related Items. | | | |
| Purchase Date | The date the Item was purchased. | | | |
| Depreciate Over | Enter the number of years the Item is to be depreciated over, if required. | | | |
| Depreciated Value | The system calculates the current value of the Item based on the Purchase Date and the number of years the Item is to be Depreciated Over. | | | |
| Audit Date | Set the date the Item is next to be audited. | | | |

| Financial | Description |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PO Number | If Purchase Orders are enabled for the system, the field is visible and automatically populated with the PO number generated by a User within the Finance>Purchase Orders tab, when the Item order was recorded in the system. |
| Inherited Costs | |
| Inherited Capital | Total infrastructure costs of parent CI's that directly contribute to the cost of the current CI. This figure is derived from all the Cost fields within the Item Information>Costs tab of related Parent Items. |
| Inherited Ongoing | Running costs of all associated Items that enable the current CI to continue to function. This figure is derived from all the Monthly Cost fields within the Item Information>Costs tab of related Parent Items. |
| Delegate Costs | To enable cost delegation across the relationship map allowing associated Items to inherit the costs of the current CI, select Yes. This will take the figures from the Cost and Monthly Cost fields for the Item and spread them across related Child Items. |
| | Define the technique to be used to evaluate the cost split: |
| | Child Count:Costs are split by percentage based on the number of child CI's the costs are being delegated across. |
| | User Count:Costs are split proportionally based on the number of users of the child CI's the costs are being delegated across. |
| | <i>Custom %</i> : The relationship itself allows for the % cost to be assigned |

The figures displayed within the Availability fields are automatically calculated by the application, using the Item Lifecycle as it moves between online and offline States:

| Availability | |
|------------------|--------------------------------------------------------------------------------------------------------------|
| Avg Repair Time | Entries displayed here are automatically calculated based on the average length of time an Item is offline. |
| Avg Time To Fail | Figures displayed here are automatically calculated based on the average time between an Item being offline. |

1.42.1 Billing Enabled

When Billing is enabled, a Service Level hyperlink is available within the Costs screen. This provides access to the Service Level Agreement details that govern the lifecycle for Requests logged against the Item.

| em Informa | tion | | | | | | | |
|------------|------------|----------------|----------|--------------|------------|----------------|----------|---------------------|

| | | | | | | | | Done |

If Invoices are also enabled, an Invoice Number hyperlink is available and when selected, will display the invoice details for the Contract that covers the Item. The Start Date and End Dates stipulate the contract length covered for the Item. It is summarized by the days or hours recorded in the Expires field.

The Contract tab within the Item Information Costs tab summarizes the contract details that cover the Item. Further Contract details can be found within the relevant Contract Number within the Finance>Invoices screen.

1.42.2 Create a Contract

Through the Item Costs tab, Contracts with an associated Invoice Number (if relevant) can be generated for an Item, after it has been logged in the system.

To add a Contract to an Item, within the Configuration>Item screen:

- 1. Select the Item Number
- 2. Move to the Costs tab

The Contracts tab is visible in the bottom right corner of the screen

3. Click Edit

The Add and Delete buttons are made available within the Contracts tab

| | | | | | | Contracts |
|------------|--------|-------|--------------|----------|--------|-----------|
| Contract # | ₹ Туре | SLA | E Start Date | End Date | ≣ | Add |
| | | 0 - 0 | of 0 Results | | | Delete |
| | | | | Delete | Cancel | Save |

4. Click Add

(If Invoices are enabled in the system, an Invoice number will be automatically generated and assigned to the Contract).

| Item Information | | |

| | High | 12 Hours | 24 Hours | 48 Hours | Yes | None | |
| | Medium | 18 Hours | 36 Hours | 72 Hours | Yes | None | |
| | Low | 24 Hours | 48 Hours | 96 Hours | Yes | None | |
| Contract Type | Per Item | | | | | | |
| Time | Subscription | - | | | | | |
| Start Date | Subscription | a. L: | | | | | |
| | Time Limited Support Hour | | | | | | |
| End Date | Support Hour | | | | | | |
| Notes | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | | | | | | |
| Price | \$0.00 | | | | | | |
| Tax | \$0.00 | | | | | | |
| Taxable | | | | | | | |
| Total Cost | \$0.00 | | | | | | |
| | | | | | | Cancel | Sav |

6. Assign the Time period to be covered by the Contract:

If *Subscription* is selected, the Start and End Dates are automatically completed by the system, but can be edited if required.

If *Time Limited Subscription* is selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually, entering the length of time for the subscription period.

If *Support Hours* is selected, the number of support hours purchased by the Customers should be entered.

If *Support Hours by Month* is selected, set the number of hours purchased per month and define which day of the month contract is to rollover to start the new month. The Total Support Hours will automatically be calculated based on the Start and End Dates set for the Contract.

(If a Contract is forward dated with a Start Date set in the future, the Pending Contract status is assigned. See Pending Contracts.)

- 7. Add any relevant Invoice Notes
- 8. Check the Taxable box, if the Contract is to be taxed
- 9. Click Save.

If Invoices are enabled in the system, an Invoice number will be automatically generated for the Contract and made available within Finance>Invoices. Payment will need to be processed by a Finance User before the Contract can be enabled in the system. If invoice payment is required before the contract can be enabled in the system the following Warning message is displayed:

10. Click Next

The Contracts information is only populated after the Invoice has been processed. To process the Invoice, as a Finance User move to the Finance>Invoices tab. Once the relevant Invoice payment has been processed the Contract details will be visible in the Costs >Contracts tab.

1.44 Outages Tab

Planned outages can be created for an Item under the Outages tab. This is a period of time an Item will not be available for a Customer's use.

If an Item has an SLA with a specified Blackout Period, Outages should be planned to fall within this time. The Blackout Period is an agreement between the Customer and the Service Desk regarding a period of time when the Customer has no service expectations. This can also be the preferred time for Item upgrades and maintenance without affecting service availability.

When an Outage is being created, the Blackout Periods times are displayed to ensure the User creates a new Outage that does not breach the Item's SLA.

1.44.1 Creating an Outage

To create an Outage:

- 1. Select Configuration > Items
- 2. Select the Item Number
- 3. Go to the Outages tab
- 4. Click Edit

| Item Info | rmation | | | | | | |
|-----------|-----------|------------|--------------|----------|---------------|-----------------|------------------|
| Infor | mation | Details | Costs | Requests | Relationships | Outages / | MIE Snapshots |
| New | | | | | | Item Number 100 | 0 (WIFI Service) |
| No. 🔳 S | tart Date | 🛓 End Date | Reason | | Ву | | = |
| | | | 0 - 0 of 0 F | Results | | | |
| | | | | | | Cancel | Save |

5. Click New

| Item Information | | | | | | |
|------------------|------------|-------|----------|---------------|---------|----------------|
| Information D | etails | Costs | Requests | Relationships | Outages | AMIE Snapshots |
| Details | | | | | | |
| Interval | One Time | - |] | | | |
| Start Date | | | | | | |
| End Date | | | | | | |
| Notification | None | | | | | |
| Offline Status | Offline 💌 | | | | | |
| Online Status | Deployed 💌 | | | | | |
| Reason | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | Cancel | Save |

The screen will expand to display the Outage Editor screen including the Blackout Period, if defined for the Item associated SLA.

| Planned Outages | |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Details | Description |
| Interval | Select One Time if the Outage is a one off, or set regular outages based on a weekly or monthly basis. |
| Start Date | Select the Start Date within the calendar, and modify the Time accordingly inside the calendar pop-up. |
| End Date | Select the End Date within the calendar, and modify the Time accordingly inside the calendar pop-up. |
| Notification | Select Email or SMS Notification about the Outage is to be sent to the Primary Contact of the Org. Unit and All Owners associated with the Item, or All members of the Org Unit and All Owners associated with the Item. |
| Reminder | This option is displayed when a Notification is set for the Outage. |
| | If a Reminder notification is to be applied to the Outage, check the box and define the period of time prior to the Planned Outage period that the reminder is to be issued. |
| Reason | Enter a description that details why a Planned Outage is being scheduled. |

Within the table the Start and End Time is displayed as Local Time and Actual Time.

- Local Time is based on the time zone of the logged in User
- Actual Time is based on the SLA time zone.

6. Define the Interval for the Outage

Select One Time if the Outage is a one off, or set regular outages based on a weekly or monthly basis.

7. Enter the Outage details

Select the Start/End Date within the calendar, and modify the Time accordingly inside the calendar pop-up

- 8. Set the Notification method and recipients, for when the Outage is saved
- 9. Set Reminders, if required

Tick the Reminder Email field, if a reminder is to be emailed to defined recipients prior to the Outage time. Define the length of time before the Outage occurs that the reminder is to be sent.

| Notification | Email 💌 | Primary Contacts |
|--------------|----------|------------------|
| Reminder | 24 hours | ▼ before outage. |

10. Define the Offline Status and Online Status for the Item

These are the States the Item will be automatically assigned in the CMDB when the Planned Outage commences and ends.

- 11. Complete the Reason for the Outage
- 12. Click Save.

The Outage notification is sent to the defined recipients upon save.

13. Click Save and Done.

To view the details of the Outage, select the Outage No. link in the Outage List View.

See: Outages for more information on setting up and viewing Item Outages.

1.45 Searching for an Item

To search for Items in the CMDB use the Search button on the Configuration>Items screen.

To search for an Item:

1. Click

A search page is displayed with the options to search across the Team, Item Status, Manufacturers, Global Items, Item Ownership, Item Categories and Types. There is also the option for the search results to return deleted Item information.

| arch Items | | | |
|--------------------------|----------------------|---|--|
| al Options | Attributes Sull Text | | |
| Item No. | | | |
| Team | | • | |
| Description | | | |
| Notes | | | |
| Manufacturer | | - | |
| | A.II. | | |
| Search Globals | All | • | |
| 0.0 | Deleted Items Only | | |

| User Name | | | |
| Org. Unit | | | |
| Purchase Order Option | | | |
| Purchase Order No | | | |
| Type Options | | | |
| Item Category | | - | |
| Item Type | | | |
| Status | All | | |
| | C Active | | |
| | Inactive | | |

2. Define any Item Attributes

To complete a Full Text search select that option and then enter relevant text in the Term field. (See: Full text searches.)

3. Click

A list of Items will be displayed.

For an advanced search on specific Item details, it is necessary to enter the Item Category. When this is selected the Item search page will expand:

| Search Items | | | |
|--------------------------|----------------------|-----------------|--------------------------------|
| Global Options | Attributes Full Text | CPU | |

1.45.1 Tips on searching for an Item:

 Select the Deleted Items Only option to return a list of all Items that have been deleted in the system. To re-enable these deleted Items, once the search is executed, select the Item ID# followed by

- To search on an Item's Status, first select the Item Category
- To search on attribute fields of an Item, first select the Item Category
- To return a list of Items that are allocated to Customers or Org Units, select the Assigned Only option from the Search Globals drop-down list.

1.46 Full Text Search Options

A variety of search options, including the ability to search using terms or phrases, can be used to find information in the Knowledge Base or using any full text search fields included in system search screens. Search options include:

- A single character wildcard search using the ? symbol
- A multiple character wildcard search using the * symbol
- A fuzzy search using the tilde, ~, symbol at the end of a single word. For example, to find words similar to roam, enter roam~ and this will return terms like foam and roams.

When searching using a phrase, the group of words need to be entered in the Text field within double quotation marks, for example, "user account access". Complex searches can be conducted using a combination of phrases or terms with boolean operators and all search results are relative to the Team assignment of the User or Item ownership for a Customer.

The boolean operators (i.e., AND, NOT, OR, +) must be entered as uppercase letters. For example:

- "user" OR "account" returns results related to either word
- "user" AND "account" returns results with both words
- "user" NOT "account" returns results including "user" but not "account"
- +user account returns results that must contain "user" and may contain "account"
- "user" -"account" returns results that contain "user" but not "account". (Same results as using NOT.)

To further control the boolean logic, more complex searches can be conducted. For example, to search for either "user" or "account" and "access", the search words would be entered as: (user OR account) AND access. This will return results where "access" must be included, while either term of "user" or "account" is found.

Fuzzy logic searches using the '~' (tilde) can be performed on a single word term with the '~' at the end of the word. A value between 0 to 1 can also be applied to the search, where the value closer to 1 ensures terms with higher similarity are matched. If a value is not defined, the default of 0.5 is applied to the search. For example, roam~ should return results with similar spelling, like foam and roams. The search term of roam~0.8 might return words like roams, roamed.

Wildcards can be used to replace single character '?' and multiple characters '*' in search terms. For example, te?t, test* or te*t. Wildcards can not be used as the first character of a search.

Proximity searches can be used to find words in a phrase within a specific distance away from the entered search term. To conduct a proximity search use "~" at the end of the phrase. For example, "user account"~10 will search for results where the word user and account are within 10 words of each other.

Escape character searches are also supported in the system and include: + - & || ! () { } [] ^ " ~ * ? : \

An example of using escape characters when searching for (1+1):2, requires the search syntax of ((1+1)):2 to be entered. It should be noted that the '\' must be entered before the escape characters.

1.46.1 Field Searches

Within the system full text searches can be conducted on specific fields, these include:

| Search Screen | Fields |
|----------------|-----------------------------------------------------------------------------|
| Request | Subject, description, notes, attachments and solution. |
| Item | Number, itemtype, category, attachments and notes. |
| Knowledge Base | Title, summary, body, attachments, itemtype, classification, and custom1-5. |
| Forum | Title, content and author (last name). |

To search on a specific field, within the Term or All Text field enter the name of the field to be searched on followed by a colon and the term or text. For example, if searching for a specific Title, the Term or All Text search field would be completed as follows for the various search types:

- single word search title:canceled
- phrase search title:"canceled ticket"
- multiple word search title:canceled OR title:ticket.

1.47 Bulk Item Update

The new ownership details for multiple Items can be added using the Bulk button within the Items list view. This functionality allows Users to add one or more Customers or Organizational Units to multiple Items within one screen. If the Items have mixed ownership before the update, and these details are no longer relevant, the current ownership details need to be adjusted within each individual Item.

If Parent/Child Relationships are configured for the Items, only the Parent Items' ownership details can be updated. The related Child Items will automatically adopt the amended Parent ownership details.

Multiple Items can also be deleted using the Bulk Item button.

To update multiple Items:

1. Go to Configuration > Items

The Items List View is displayed.

2. Check the boxes next to the Items numbers that need to be updated

| Ite | ms | | | | | | | | | | | |
|-----|-----------------------------|-----------------|---------------------|--------------------------|----------------|------------|--------------------|---------------------------|--------------------------|---------------------------|-------------------------|---|
| | New | ♀ Search | Bulk | Export: Current Page 💌 📕 | 84 | | | | Filter: | All Items [sys] | ▼ Display: 10 ▼ | |

- 7. Click on the relevant new owner link within the Find box to add the owner
- 8. Select Save.

The Details and Ownership information of all Items are updated.

1.48 Request Fulfilment Overview

The goal of Request Fulfilment is to manage the lifecycle of all Service Requests.

A Service Request is a generic term that describes the numerous and varied demands placed on the service and support organization. Many are small changes, which are considered to be low risk, frequently occurring and low cost in nature, such as change a password or install a software application request. Alternatively, it may simply be a Customer asking for information. It is the scale, frequency and low-risk nature of the Service Requests that require that they be handled by the Request Fulfilment process, and not Incident or Change Management.

The frequent recurrence of Service Requests requires a predefined process Workflow be set with the support Technicians, service targets and escalation paths in place. To cater for the diverse nature of Service Requests, at minimum two Workflows should be customized for Request Fulfilment, one to handle simple requests for information and the other to deal with standard changes.

In the system, Service Requests are logged against Service Items in the Service Catalog and follow Workflows that ensure that each Request is handled with consistency. The Workflows define the actions required to correctly implement any changes to the Service and define the responsibilities, authorization and timeframe expected to manage the changes that may result from a Service Request.

Once a Workflow is assigned to a Service Request, it is routed to an appropriate Technician based on Service Request Workflow State. After a Technician completes their assignment, the Request is forwarded to the next User based on the configuration of the next State for a standard change or closed, if it is a simple request for information.

When Service Requests are raised for Service Item breakdowns, the system allows them to be easily associated with an Incident within the Analysis tab of the Request. Or, if the Service Request results in a change to an Item that is not in the Service Catalog, a Change Request can easily be generated within the Service Request.

If a Service Request is related to an Incident, Problem or Change Request and that related request in the other Process is closed, the Service Request is automatically closed. The system views the request hierarchy from low to high as Service Request, Incident, Problem and Change Request, and if a related request of a higher type is closed, all the lesser type requests are automatically closed, or if the handshaking facility is enabled for the system, moved to the Pending-Approval State.

See: Service Catalog.

1.48.1 Implementing Request Fulfillment

To set up the Request Fulfillment Process in the system, the following steps are to be completed:

1. Assign the Request Process to the relevant Users within the User Information screen under the User>Users tab. (See:Create a User.)

| 슈 Home | Operations | [/] Change | | () Service | ႔ User |
|-------------------------------------|-----------------------------------------|------------------------------|-----------------------------|------------|--------|

| 🖾 Email | 🖳 vCard | | | | |
| Title | | Assign t | he request proces | ss to the | |
| First Name Last Name Username | | User wit | hin the User info Screen | rmation | |
| Roles | Supervisor Administrator Customer | | artner inance | | |
| Default Portal | User Portal | • | | | |
| Operations Processes | Request V Incid | lent Problem | | | |
| Change Processes | Change Rele | ase 🗹 Deployme | nt | | |
| Internal Processes | Service Level Con | figuration 🛛 Knowledg | je | | |

2. Create or review the SLA within the Service>SLAs tab, and associate the Incident Service Request Workflow to the SLA in the SLAs Workflow tab. (NB: The Supervisor User setting up the SLA must be assigned the Internal Process of Service Level in their User Information screen to complete this action.)

| 2 | ☆ Home | 🕀 Operations | [?] Change | 芸 Configuration | () Service |
|-------|--------------------|----------------------------------------------------------------------------------------|------------------|--------------------------------------|---------------------|
| SLAs | OLAs Underpir | nning Contracts Workflows | Breach Codes | Contracts Associate the Service I | Request workflow |

| | Name | Typical Change Workflow Standard Change Workflow | Description | | |
| | Standard Change | Service Request Workflow | Configurable | Standard Change Management wor | kflow |
| | | Incident Workflow IWFlow Emergency Change Workflow Change Deployment Workflow | - 1 of 1 Results | | |

3. Review the Service Request Workflow within the Service>Workflows tab. (See: Service Request Workflow.)

4. Create a Service Request Team within the User>Teams screen. (See: Service Request Team.)

| 🕂 Home | Operations | [/] Change | | () Service | ဂ္ဂ User |
|-------------------------|-----------------------------------------------------------------|----------------------|-------------|-------------------------------------------------|-------------|
| | Units Partner Organi the team options and within the info | associate Technician | | Associate Groups with w States in the States | |
| Information | Service | Group St | ates Layers | | |
| Associate the Service | Request in the Service | e tab | | | |
| Details | | | Location | | |
| Team Name | | | Address | | |
| Process | Change Request | • | City Create | Technician work Groups : | and Manager |
| Team Lead | Service Request Incident Problem | | | roval Groups within the | |
| Incoming Email | | D | Zip | | |
| Email Display Name | | | Country | • | |
| Customer Notification | Email | • | Phone | | |
| Technician Notification | Email | | | | |

5. Associate the SLA to an Item or Customer or Org Unit. This final step ties all the elements together when a Service Request is created, as the SLA associated with the Item, Customer or Org Unit assigned to the Request determines the Workflow, Team and Technicians that are made available within the Service Request Information screen.

1.49 Assigning an SLA

Within the system a Service Level Agreement (SLA) can be assigned to a Customer, Organizational Unit, Item or a request. When a request is created, the system checks if any of these elements have an SLA. The business logic applied to assign an SLA to a request is as follows:

- 1. If the Customer has an SLA then assign this to the request
- 2. If the Customer does not have an SLA but the Organizational Unit does, assign this to the request

- 3. If the Customer or Organizational Unit does not have an SLA but the Item does, then assign this to the request
- 4. If none of the above elements have an SLA, the system Default SLA as defined by Admin in Setup>Privileges>Requests tab, is assigned to the request.

When Billing is enabled, the system checks that a maintenance contract is in place during the request creation process and assigns a Status of Pending - No Contract when an SLA contract is non-existent or expired. To assign an SLA in this situation, the Technician creates a Per Item or Per Request SLA Contract within the Contract tab of the request Information screen. (See: Create a Contract.)

1.49.1 Assigning an SLA to a Customer

To assign an SLA to a Customer when Contracts are disabled:

- 1. Select User>Customers
- 2. Select the required Customer name link

The Customer Information screen opens.

- 3. Move to the Contracts tab
- 4. Click Edit
- 5. In SLA Details, use the drop-down menu to select the SLA for this Customer

| SLA Details | |
|---------------|-------------|
| Service Level | |
| | Warranty |
| | Silver |
| | SLA |
| | Platinum |
| | Default KBA |

6. Click Save.

1.49.2 Assigning an SLA to an Organizational Unit

To assign an SLA to an Organizational Unit when Contracts are disabled:

- 1. User>Organizational Units
- Select the required Org Unit Name The Org Unit Information screen will open.
- 3. Select the Contracts tab
- 4. Click Edit
- 5. In SLA Details, using the drop-down menu, select the SLA for this Customer

| Details | Customers | Technicians | Departments | Items | Requests | Contracts |
|--------------|------------|-------------|-------------|-------|----------|-----------|
| | | | | | | MyCor |
| SLA Details | Warranty | | | | | |
| Service Leve | ✓ Silver | | | | | |
| | Gold | | | | | |
| | Events SLA | | | | Cancel | Save |

6. Select Save.

1.49.3 Assigning an SLA to an Item

To assign an SLA to an Item when Contracts are disabled:

- 1. Select Configuration>Items
- 2. Select the required Item number hyperlink The Item Information screen will open.
- 3. Select the Costs tab
- 4. Click Edit
- 5. In SLA Details, using the drop-down menu, select the SLA for this Item

| Information | Details | Costs | Requests Relationships | |
|--------------------------|----------------|-------|-------------------------|--------------------|

| Inherited Costs | | | | |
| Inherited Capital | | | | |
| Inherited Ongoing | | | | |
| Delegate Costs | OYes ⊙No | | | |
| | | | Delete Cancel | Save |

6. Select Save.

1.49.4 Assigning an SLA to a Request - Only when Billing is enabled

When a request is created without a valid contract, the system assigns the request a Pending - No Contract Status. The request is locked and cannot be edited by a Technician until a valid Contract is in place. See:Create a Contract.

1.50 Incident Management

The function of the Service Desk is to act as the point of contact between customers of IT services (end users) and the IT service provider (IT department). Its role is to handle all requests for service, including Incidents, and provide an interface for other activities such as Request Fulfillment, Change, Problem and Configuration Management.

An Incident is defined as any event that is not part of the standard operation of a service, and causes, or may cause, an interruption to, or a reduction in the quality of service. The goal of Incident Management is to restore normal service as quickly as possible, with minimal disruption to the business. This ensures that the highest achievable levels of availability and service are maintained.

Incident Management objectives include:

- Incident detection and recording
- Classification of all Incidents and initial support
- Investigation and diagnosis
- Escalation
- Resolution and recovery
- Incident closure
- Incident ownership, monitoring, tracking and communication.

As part of the Incident Management Process, if an Incident is related to a Problem or Change Request and that related request in the other Process is closed, the Incident will be automatically closed. The system views the request hierarchy from low to high as Service Request, Incident, Problem and Change Request, and if a related request of a higher type is closed, all the lesser type requests are automatically closed

1.50.1 Implementing Incident Management

To set up the Incident Management Process in the system, the following steps are to be completed:

1. Assign the Incident Management Process to the relevant Users within the User Information screen under the User>Users tab. (See:Create a User.)

| 🚹 Home | Operatio | ns [//] Cl | nange 🛱 | Configuration | () Service | ဂ္ဂ User |

| Standard Change | | Configurable S | Standard Change Management wo | rkflow |
| | Incident Workflow | 1 of 1 Results | | |
| | IWHow Emergency Change Workflow | TOTTResults | | |
| | | | | |

3. Review the Incident Management Workflow within the Service>Workflows tab. (See: Incident Management Workflow.)

4. Edit the Default Incident Management Team within the User>Teams screen. (See: Incident Management Team.)

5. Associate the SLA to an Item or Customer or Org Unit. This final step ties all the elements together when an Incident is created, as the SLA associated with the Item, Customer or Org Unit assigned to the Incident determines the Workflow, Team and Technicians that are made available within the Incident Information screen.

1.51 Problem Management

Problem Management extends the process of Incident Management. An Incident is a non-standard operational event with the potential to harm the quality of an IT service. Incidents are reported by end-Users, encountered by technicians and system/database Administrators, or automatically detected by system management tools. In all instances, Incidents should be reported to the Service Desk.

A Problem describes the underlying cause of one or more Incidents that are being investigated. However, not all Incidents are investigated as Problems. For example, if the power-supply in a desktop computer blew up, it should be treated as an Incident, and the power-supply replaced. (Although if the power-supply is controlled by Change Management, it would need to be treated as a minor change request.) However, if there was a spate of burnt-out power-supplies in the same model desktop, then an underlying Problem with the desktop may possibly exist and further investigation into the cause and potential solutions may be required.

For Incidents to be correctly categorized as a Problem, organizations must define the evaluation criteria. For example, raise a Problem if more than 10 Incidents are logged in the space of three hours that refer to the same Configuration Item.

After the underlying cause of a Problem has been diagnosed, it is referred to as a Known Error. At this point, the root cause of the Problem is known, and the most appropriate course of action is to be determined. This may take the form of a structural resolution by raising a request for change (RFC). Alternatively, it may be decided, after consultation with Users and Customers, to implement a workaround or recovery action.

In the case of the above example:

- Problem: Brand X Desktops no longer operating
- Root Cause: Faulty power-supply in July '09 models
- Known Error: Warranty replace with new power-supply.

As part of the Problem Management Process, if a Problem is related to a Change Request and that related Change Request is closed, the Problem will be automatically closed. The system views the request hierarchy from low to high as Service Request, Incident, Problem and Change Request, and if a related request of a higher type is closed, all the lesser type requests are automatically closed.

1.51.1 Implementing Problem Management

To set up the Problem Management Process in the system, the following steps are to be completed:

1. Assign the Problem Management Process to the relevant Users within the User Information screen under the User>Users tab. (See:Create a User.)

| 🚹 Home | Operations | [//] Chang | je <u>≕</u> Config | uration | () Service | ी User |

3. Review the Problem Management Workflow within the Service>Workflows tab. (See: Problem Management Workflow.)

4. Create a Problem Management Team within the User>Teams screen. (See: Problem Management Team.)

5. Associate the SLA to an Item or Customer or Org Unit. This final step ties all the elements together when a Problem is created, as the SLA associated with the Item, Customer or Org Unit assigned to the Problem determines the Workflow, Team and Technicians that are made available within the Problem Information screen.

1.52 Change Management

The goal of Change Management is to ensure that standardized procedures are used to efficiently handle all changes, and minimize the impact of any related Incidents upon a service. The Change Management process prevents unauthorized CMDB modifications and reduces disruption to Customers. It does this by coordinating the build, test and implementation of any change that impacts the CMDB.

Changes may arise reactively in response to Problems or externally imposed requirements, for example a new or changed regulatory situation. They may also be proactive, instigated by management to improve an organization's efficiency and effectiveness, or to enable or reflect new service improvement initiatives.

The Change Advisory Board (CAB) is responsible for approving any Request for Change (RFC). This involves assessing the impact, resources and priority of the RFC. The CAB then advises the Change Manager of their assessment and assigns an appropriate Workflow.

Change Workflows within the system ensure that each RFC is handled with consistency, based on the risk and impact assessment of the CAB. Change Workflows define the actions required to correctly implement the change, and define the responsibilities, authorization and timescale expected to manage the change.

Once a Workflow is assigned to an RFC, it is routed to an appropriate Technician based on the Change Workflow State. After a Technician completes their assignment, the RFC is forwarded to the next Technician based on the next state of the Change Workflow.

When the RFC has progressed through all of the required Workflow States, a change review is undertaken to verify that the RFC has achieved its objectives. If the change objectives are not met, the RFC's associated back-out procedure is implemented to rollback the change and restore the CMDB to a valid state.

As part of the Change Management Process, all requests related to a Change Request are automatically closed when the related RFC is closed. The system views the request hierarchy from low to high as Service Request, Incident, Problem and Change Request, and if a related request of a higher type is closed, all the lesser type requests are automatically closed.

1.52.1 Implementing Change Management

To set up the Change Management Process in the system, the following steps are to be completed:

1. Assign the Change Process to the relevant Users within the User Information screen under the User>Users tab. (See:Create a User.)

| 🚹 Home | Operations | [2] Change | | () Service | ी User |

5. Associate the SLA to an Item or Customer or Org Unit. This final step ties all the elements together when a Change Request is created, as the SLA associated with the Item, Customer or Org Unit assigned to the Request determines the Workflow, Team and Technicians that are made available within the Service Request Information screen.

1.53 Release and Deployment Management

The purpose of Release and Deployment Management is to maintain the integrity of an organization's production environment when deploying releases. Effective Release and Deployment processes allow your service organization to deliver change faster and with minimal risk to the business. It provides consistency in implementation approach and assures customers that they can use a new or changed service in line with business requirements.

Part of the Service Transition phase of the Service Lifecycle, Release is responsible for planning, scheduling and controlling changes and updates from Test to Live environments. It ensures the integrity of the Live Environment is protected and that the correct components are released. While Deployment includes the activities or tasks responsible for moving new or changed hardware, software, documentation and process to the Live Environment.

This process is overseen by the Release Manager, whose role is paramount to the success of a release and a required member of a Release Team. The Release Manager directs the process using all information presented to help assess release readiness, and to efficiently identify deployment targets for the deployment phases of a release. This level of control guarantees the Release Manager can deliver updates to the live environment successfully, to all relevant parties, on time.

The capability to leverage relationship maps defined within the embedded CMDB allows the Release Manager to assess the impact of a release, as all related Items can be easily associated with a release package. The extensive use of CIs to represent all aspects of a release and the capability to directly associate any category of CI with the release itself provides a complete picture of how a release will impact the organization before any tasks are undertaken. The Release Manager can identify CI Types impacted by the deployment and CMDB information details users, organizational units and specific infrastructure affected by a release.

Complex and generally a lengthy process, large scale deployments require project management to ensure success. To this end, Release Management includes related activities that require scheduling in and around the internal activities of the service desk. The Release Manager can readily achieve this by exporting release package information to Microsoft Project and administering the full process using a dedicated project management tool.

Exported project files contain all related Change Requests for a Release, providing all relevant parties with an end-to-end schedule of change. The export can also be filtered to include deployment activities that can be merged into the final schedule once the Implementation of all Changes is completed, resulting in a full historical account of the release cycle.

Within the system, the Release Manager creates and manages the Release within the Change>Release tab. Within the Deploy tab of a Release, the Deployment Tasks are generated and made available as groups within the Change>Deployment tab, while the individual activities are available within the Change>Deployment Tasks tab.

To review examples of Release and Deployments, refer to Release Management Applied.

1.54 Release Management Applied

Release Management in the system provides Release and Deployment Managers with a centralized repository for managing the introduction of changes, regardless of size or risk, to the environment. Two examples for rolling out a Release are detailed below, as Releases can potentially be very complex, which requires great flexibility in the system.

The first example illustrates a software rollout, with software being upgraded, replaced and a couple of new installations. Although this Release may be considered a little complicated, the nature of the Release is low risk. Due to the minimal business criticality level of the Release, it has been decided that this deployment will not be controlled by Change Management. The second example that manages the update of Microsoft Exchange, a higher risk Release, controls the Deployment with Change Management.

Before commencing the examples, the system needs to be configured to handle Release Management and the following elements must be in place:

Users assigned the Release & Deployment Process

Create a Release & Deployment Team

Build or Edit the Release Workflow.

1.54.1 Example 1: Install, upgrade and replace Office packages

Release Objective: To rollout the latest update of Office 2008 to customers. Replacing existing software for customers that have Open Office, and installing new software for customers without access to any Office applications.

The example will apply the system default Release Workflow that includes an added Workflow State of Trial Deploy and also has a number of Approval States. It includes Deploy and Trial Deploy States as the Workflow stages for creating the related Deployment Tasks in the system.

The Release Team that will action the Deployment Tasks has also been divided into three Groups: Software, Hardware and all Deployment Technicians.

| Team Information | | | | | | |
|------------------|-----------------------|----------------|-----------------|-----------------|--------------|-----------|
| Information | Service | Group | States | Laye | ers | |
| | | | | | | Team SMG1 |
| Groups | | | | | | |
| | Name | 🛓 Assigned Tec | chnicians | Assigned Manage | rs Group Typ | oe ≣ |
| | Default Group | Craig Wilson | | | Techniciar | ı |
| | Default Manager Group | | | Mike S | Manager | |
| | | | 1 - 2 of 2 Resu | lts | | |
| | | | Can | | New | Save |

To create the Release:

- 1. Go to Change>Releases
- 2. Click New
- 3. Complete the Release information

| New Release | |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| | $\underline{\mathbf{A}} \star \mathbf{B} \mathbf{I} \underline{\mathbf{U}} \mathbf{ABC} \mid \Xi \Xi \mathbf{i} \Xi \mathbf{i} \mathbf{i} \in \mathbf{i} \Xi \mathbf{i} \mathbf{i} = \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i} = \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i} \mathbf{i}$ |
| | |
| | |
| | |
| | |
| | Path: p Words:0 |
| | Cancel Save |
| | |

| Release Fields | Description |
|----------------|----------------------------------------------------------------------------------------------------------------------------------|
| Name | Enter a Name that reflects the objective of the Release. |
| Priority | Set the Priority, which will correspond to the target timeframes for the SLAs associated with the Release via the RFCs. |
| Team | Select the Release Team who will oversee all part of the Release. |
| Workflow | Set the Workflow that includes the relevant stages to manage the Release. |
| | The Release Manager moves the Release through the stages of the Workflow, relevant to the events being undertaken and completed. |
| Status | This is set to the Default Entry State of the selected Workflow. |

| Release Fields | Description |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Next Action | Based on the assigned Workflow, select the next Workflow State for the Release, as required by the next Release activity. |
| | Some States are Approval States, when the Release |
| | moves to an Approval State the Approve 🄊 and |
| | Reject 🏂 options are visible. The Release Manager selects the appropriate option and the system automatically moves the Release to the pre-configured next State, relative to the option applied. |
| Manager | From the drop-down list of Managers assigned to the default Entry Point of the assigned Release Workflow, select the Release Manager to manage the project when it is initially created. |
| | The User defined here, is the Manager who can edit the Release after it is saved and then move it to the next State. |
| RFC Control | If the Control Deployments via RFC option is enabled in Admin>Setp>Privileges>Requests, this field will be displayed. |
| | Select Yes if the Deployment is to be routed through Change Management, to enable the scheduling of Deployment Tasks. Select the RFC Workflow to manage the Change Request associated with the Deployment, and set the default open State or Deployment State for the Tasks. |
| Description | Enter information that describes the goal of the Release. |

4. Select Save.

From the above screen snap, we can see that Simone Supervisor is the Release Manager assigned to the Release and that the Release is of low Priority, will be handled by the Release Team and managed using the Release Workflow. The Release is currently in the default entry point of the Release, the Plan State. It should be noted that moving through the Release Workflow is determined by your organization's business processes and the defined Workflow. The system is to be used as a central repository to manage Releases and a point of reference to keep all relevant parties updated regarding a Release.

1.54.2 Assign Item Types

To associate the Items that are to be created or updated as part of the Release, the Release Manager has to define the reason for the Release and assign the relevant Item Type to the Release. This is achieved within the Item Types tab of the Release. For our example, there will be three reasons for the Release:- Upgrade existing software, replacing existing software and installing new software.

As a Release Manager, to assign Item Types to the Release:

- 1. Select the Item Types tab inside the Release information screen
- 2. Click Edit
- 3. Click Add

| Details | Item Types | Analysis | Elements Deployn | nents |
|------------------|------------|----------|-----------------------|-------|
| Details | | | | |
| New Type | 0 | | Find Item Type (Name) | |
| Reason | New | \$ | | |
| Media Attachment | (| ÷ 0 | | |

4. Assign the Reason of Update

For customers with Office 2008, based on the system configuration within the CMDB Item Type of Office 2008, we will just be updating the software version number in the Item Details tab.

| Details | Item Types | Analysis | Elements Deployments |) |
|-----------------|------------|----------|-----------------------|---|
| Details | | | | |
| Item Type | | | Find Item Type (Name) | |
| | New | | | |
| Reasor | / Update | 1 | | |
| Media Attachmen | Replace | ÷ 0 | | |

5. Search and select the Item Type Office 2008 in the Find Item Type field

When the Item Type is associated with the Release, the fields available on the Details Tab of Items using the Type are displayed.

 Enter the information that is to be updated against the Item in the CMDB and Save For our example 2011 will be entered in the Version # field.

| Details | Item Types | Ar | alysis | Elements Deployments |
|----------------------|-------------|----|--------|------------------------------|

| Order # | | | | |
| Supplier | | | | |
| Supply Date | | | | |

- 7. To replace Open Office with Microsoft Office 2008, click Add
- 8. Select the Reason of Replace

The Find Item Type field is displayed next to the New Type field.

9. Search and Select the Item Type to be replaced within the Item Type field For this example it is Open Office.

| Details | Item Types | Analysis | Elements Deployments |
|------------------|------------|----------|---------------------------|

- 14. Click Save
- 15. To create new Items in the system, click Add The Reason of New is assigned by default.
- 16. Search and select the Item Type to be applied to newly created Items in the CMDB For this example, new Items using Office 2008 are being created.
- 17. Assign the Item Type to the Release

The fields available on the Details tab of Items using the Type are displayed.

| Details | Item Types | Analysis | Elements Deployments |
|------------------|-----------------|----------|-----------------------------------------------------------------------|
| Details | | | |

| | OpenOffice | Replace Office 2008 | |
| | | 1 - 3 of 3 Results | |
| | | Cancel | Save |
| | | Cancer | Save |

20. After all Types have been assigned to the Release, move the Release to the next relevant State.

For this example, the Release moves to Plan Approval and approval is given. The system automatically moves the Release to Build.

| Release - Update C | office Software |
|--------------------|------------------------|
| Details | Item Types |
| Details | |
| Name | Update Office Software |
| Priority | Low |
| Team | Release Team |
| Group | Manager Approval Group |
| Workflow | Release Workflow |
| Status | Plan Approval |
| Next Action | <u>A</u> A |
| Manager | Simone Supervisor |

As the Release is not to be managed using Change Management, the Release Manager can move directly to the Deploy tab to create the Deployment Tasks.

1.54.3 Create Deployment Activities

Deployment Tasks, the activities completed by Technicians included in the Release Team Groups, are created in the system by considering the physical location of the Customer or Organizational Unit. That is, when grouping the tasks that are to be completed as part of a Release, the system presents the information based on Customer location so Technicians can be deployed to specific locations to complete jobs.

Tasks can be created on a per Customer Deployment basis for Items that are assigned specifically to Customers. Or, for Items that are shared across Org. Units or by an Org. Unit, the Create option of Deployment per Org. Unit can be used for creating the Deployment. The Global Deployment option allows the Tasks to be created for the whole Organization as the Item being updated, created or replaced is owned/accessed by all Customers in the system.

Once the Customers are assigned to the Deployment, either directly or via an Organizational Unit the Release Manager must define the Group of Technicians within the Release Management Team who will action the Tasks and set the stage of the Release Workflow for the Deployment Tasks to move into an Active State ready to be completed by Technicians.

To create the group of Deployment Tasks:

- 1. Select the Deployments tab inside the Release information screen
- 2. Click New

The screen expands to show the options for the type of deployment to be created, the list of Customers who own an Item associated with the Item Types included in the Release Types tab and the Search Options box.

3. Select the type of Deployment that is to be created

For this example, per Customer Deployments will be created as all Items associated with the Release are owned directly by Customers. The list of Customers can be sorted into Org. Unit groups by clicking the toggle in the Org. Unit Column Header.

| Details | Item Types | Analysis | Elements | Deployments | · · · · · · · · · · · · · · · · · · · |
|----------|-----------------------|------------------|--------------------|-------------|---------------------------------------|
| Details | | | | | |
| Create | Deployment per Custom | er 🛊 | | | |
| Customer | | | | | Display: 10 |
| | Name | <u>≜</u> Country | ≣ Email | Phone | Org. Unit |
| | Amber Wallan | Australia | amber@ | | My Company - White |
| | Carla Parsons | Australia | carla@ | | My Company - Lilac |
| | Dennis Barry | Australia | dennis@ | | My Company - Pink |
| | Jamie Stewart | Australia | jamie@ | | My Company - Teal |
| | Lena Benson | Australia | lena@ | | My Company - White |
| | Scott Daly | Australia | scott@ | | My Company - Lilac |
| | | | 1 - 6 of 6 Results | | |
| | | | | | |

4. Assign the Customer(s) to the per Customer Deployment by selecting the field next to the Customer name and clicking

The selection is included in a Selected Customers window to the right of the main window. When all Customers are assigned to the Deployment, the group of Technicians who will action the Tasks and the Workflow State where the Tasks will become active in the system must be defined.

- 5. Click Next
- 6. Select the Group of Technicians who will work on the Deployment Tasks from the Group dropdown list

For this example the Software Technicians will be assigned.

| Release - Update Office Sof | ftware | |
|-----------------------------|-----------------------|-------|
| Details | tem Types Ana | lysis |
| Deployment | | |
| Group | Software Deploy Group | \$ |
| Deploy Status | Deploy | \$ |

- 7. Assign the stage of the Workflow where the Deployment Tasks will become active in the system As the Release is related to simply upgrading or installing Office 2008, the Deploy State will be assigned as the action State.
- 8. Select the Items to be included in the Deployment

For this example, as the replacement and upgrade of Items is simple software, all Items will be created as one Deployment that will result in individual Tasks being created.

| Detalls | Item ' | Types | Analysis | Elements | Deployments | |
|---------------|----------|---------------|-------------|-----------|---------------|-------------|
| Deployment | | | | | | |
| Group | Sof | ftware Deploy | Grout 🕈 | | | |
| Deploy Status | De | ploy | \$ | | | |
| Details | | | | | | |
| Items | 1 | 90 | | | | Display: 10 |
| | | Item Number | 🛓 Item Type | E Status | Customer | Org.Unit |
| | | 100014 | OpenOffice | Installed | Carla Parsons | |
| | | 100013 | OpenOffice | Installed | Scott Daly | |
| | | 100012 | OpenOffice | Installed | Jamie Stewart | |
| | | 100011 | Office 2008 | Installed | Dennis Barry | |
| | | 100010 | Office 2008 | Installed | Lena Benson | |
| | | 100009 | Office 2008 | Installed | Amber Wallan | |

- 9. Click 📷
- 10. Click

- 11. For the new installations of Office for customers select 🚭 within the Items field
- 12. Tick the relevant Item Type and define if the Item is to be shared or one created for each Customer
- 13. Click

| D | etails | Item Types | Analysis | Elements | Deployments | | | | |
|--------|--------|-------------------------------------------------------|-----------|---------------|-------------|-------------|-------------|----|---|
| Nev | w | | | | | | Display: | 10 | 4 |
| ld | à | Title | ≣ Status | Deploy Status | ≣ # Tasks | # Completed | Control RFC | | Ξ |
| 100005 | | Update Office Software Deployment for Dennis Barry | Open | Deploy | 1 | 0 | | | |
| 100006 | | Update Office Software Deployment for Scott Daly | Open | Deploy | 1 | 0 | | | |
| 100007 | | Update Office Software Deployment for Jamie Stewar | Open t | Deploy | 1 | 0 | | | |
| 100008 | | Update Office Software Deployment for Amber Wallan | Open | Deploy | 1 | 0 | | | |

14. Click Done.

All Tasks are now saved with a Status of Pending assigned. When the Release Workflow moves to the Deploy State, the Tasks' Status will automatically by updated to Open, prompting Technicians to complete the Deployment Tasks and move their State to Closed - Resolved. When all Tasks are completed and moved to Closed - Resolved, the Release will be automatically Closed.

1.54.4 Action Deployment Tasks

The Deployment activities created within the Deploy tab of the Release are listed in the Deployments and Deployment Tasks tabs of Change in the system. The Release Manager works the Release through the assigned workflow within the Details tab of the Release. When the Status of the Workflow is set to the Deploy State defined within the Deployment, the Tasks will move from Pending to Open.

| Release - Update C | office Software |
|--------------------|------------------------|
| Details | Item Types |
| Details | |
| Name | Update Office Software |
| Priority | Low |
| Team | Release Team |
| Group | Manager Approval Group |
| Workflow | Release Workflow |
| Status | Deploy Approval |
| Next Action | <u> </u> |
| Manager | Simone Supervisor |

For this example, within the Releases>Release#>Details tab the Release Manager has moved the Release through the Workflow States of Plan, Plan Approval, Build, Test and is currently assigned the State of Deploy Approval. Selecting Accept will move the Release to Deploy, and the associated Tasks will automatically move to Open.

| Deployment - Upda | te Office Software Deployment f | or Lena Benson | |
|-------------------|---------------------------------|----------------|--------------------------|
| Details | Tasks | | |
| | | | Deployment Task # 100019 |
| ltem | | Release | |
| Number | 100010 | Workflow | Release Workflow |
| Туре | Office 2008 | Team | Release Team |
| Version # | 10 | Manager | Simone Supervisor |
| Status | Installed | Status | Deploy |
| Reason | Update | Details | |
| Affects | | Group | Software Deploy Group |
| Customer | Lena Benson | Technician | Carla Parsons 💠 |
| | | Status | Open |
| | | Next Status | Open 🗘 |
| | | ESC Date | |
| | | | Notes History |

Within the Change > Deployment Tasks tab, Technicians can edit Deployment Tasks by adding Notes using the New Note button, which are stored in the Notes tab, or update the Status of the Task to Closed-Resolved. When all Deployment Tasks are completed, the Deployment is automatically closed by the system. When all Deployments are closed for a Release, the Release Manager can close the Release within the Details tab, by moving the Release Workflow Status to the Exit State.

| Summary | | | |
|-----------|-------------|------------|--------------------------|
| Edit | Add Note | | Deployment Task # 100019 |
| ltem | | Release | |
| Number | 100010 | Workflow | Release Workflow |

| Description | Description entered here is d | isplayed in the custo | mer portal. | | |
| | | | | | Done |

1.54.5 Example 2: Update Microsoft Exchange

Although this is considered a less complex activity as it involves only one Item, due to the business critical nature of Exchange the risk is higher. Therefore, as a Release Manager, it has been decided to manage this Release using Change Control. To manage Deployments using Change Management, ensure the Administrator has enabled the Control Deployments via RFC option in the Setup>Privileges>Requests Tab.

Release Objective: To update Exchange to Microsoft Exchange 2010

The example will apply the system default Release Workflow that includes an added Workflow State of Trial Deploy and also has a number of Approval States. It includes Deploy and Trial Deploy States, as the stages of the Workflow where the related Change Requests (RFCs) are automatically created for the Deployment, and only when the RFCs hit the Deploy State configured for the RFC Control within the Details tab of the Release do the Deployment Tasks become active. The Change Manager can view all Deployment Tasks related to the RFC within the RFC Summary screen, and when all Tasks are moved to Closed-Resolved the Change Manager can close the related RFC.

The Release Team that will action the Deployment Tasks has also been broken down into three groups, Software, Hardware and all Deployment Technicians.

To create a Release with the Deployment Control managed by Change Management:

1. Define the settings within the Details Tab and set the RFC Control option to Yes

| Details | Item Types | Analysis | Elements | Deployments | |
|------------------------|--------------------------------------------|--------------------------------|----------------------------------------------|----------------------------------|-----------|
| Details | (| | Deployment | | New Rele |
| Name | | ange | Options | • Yes No | |

| Manager Description | Format - Font fai | Description | | Impact | History |
| | | Description mily - Font siz | ie 🔹 🖘 🏂 нтт. | Impact | |
| | Format • Font fai | Description mily - Font siz | ie 🔹 🖘 🏂 нтт. | Impact | |
| | Format • Font fai | Description mily - Font siz | ie 🔹 🖘 🏂 нтт. | Impact | |

2. Click Save

From the above screen snap, we can see that Simone Supervisor is the Release Manager assigned to the Release and that the Release is of low Priority, will be handled by the Release Team and managed using the Release Workflow. The Release is currently in the default entry point of the Release, the Plan State. It should be noted that moving through the Release Workflow is determined by your organization's business processes and the defined Workflow. The system is to be used as a central repository to manage Releases and a point of reference to keep all relevant parties updated regarding a Release.

- 3. Move to the Item Types tab
- 4. Click Edit
- 5. Select Add and set the Reason to Update
- 6. Within the Find Item Type field, search for Exchange
- 7. Click on the Exchange link to add it to the Release
- 8. Upload Media Attachments, if relevant

If an electronic upgrade file is to be used for the upgrade, it can be uploaded within the Media Attachment field. This would then be made available within the Deployment Task associated with the Release.

9. Enter information that is to be updated on the Details tab of the Item being updated

These will automatically be updated in the CMDB when the Deployment Task moves from Open to Closed-Resolved.

| Details | Item Types | Ar | alysis | Elements | Deployments |
|------------------|------------|----|--------|-------------------|-------------|
| Details | | | | | |
| Item Type | Exchange | | | Find Item Type (N | lame) |
| Reason | Update | \$ | | | |

| Supply Date | | | | | |

10. Click Save and Save again.

Move to the Analysis Tab.

1.54.6 Associating RFCs with the Release

Within the Analysis tab, the Release Manager can access a list of existing RFCs that are yet to be associated with the Release. To add an existing RFC to the Release, the checkbox is marked next to the Request # link, and the Add button is clicked. The RFC no longer appears in the Analysis tab, and is now visible in the Elements tab, where it can be removed if the association was made in error.

For this example, it is assumed no relevant RFCs exist in the system, so we move to the Deployments tab where the RFC will be created as a result of the Deployment.

To create the Deployment:

- 1. Select the Deployments tab inside the Release information screen
- 2. Click New

The screen expands to show the options for the type of deployment to be created, the list of Customers who own an Item associated with the Item Types included in the Release Types tab and the Search Options box.

3. Select the type of Deployment that is to be created

For this example, a per Org. Unit Deployment will be created as the Item associated with the Release has shared ownership. When selected, the Organizational Unit associated with the Item that uses the Item Type associated with the Release is displayed in the Org. Unit. list.

| Details | Item Types | Analysis | Elements | Depl | oyments | | |
|-----------|-------------------------|-------------------|--------------------|------|---------|-------------|---|
| Details | | | | | | | |
| Create | Deployment per Org.Unit | ÷ | | | | | |
| Org. Unit | | | | | | Display: 10 | |
| | 🔄 Org. Unit | 🛓 Primary Contact | Phone | City | ≣ State | | |
| | My Company | | | | | | Ī |
| | | | 1 - 1 of 1 Results | | | | |
| | | | | | Cancel | Next | |

4. Assign the Org. Unit by selecting the field next to the Org. Unit name and clicking

The selection is included in a Selected Org. Units window to the right of the main window. The group of Technicians who will action the Tasks and the Workflow State where the RFC will be created to manage the Deployment must be defined.

- 5. Click Next
- 6. Select the Group of Technicians who will work on the Deployment Tasks from the Group dropdown list

For this example the Software Deploy Group of Technicians will be assigned.

| Release - Update Office Sof | ftware | |
|-----------------------------|-----------------------|-------|
| Details | tem Types Ana | lysis |
| Deployment | | |
| Group | Software Deploy Group | \$ |
| Deploy Status | Deploy | \$ |

7. Assign the stage of the Workflow where the RFC will be created for the Deployment

When the Release Workflow moves into the Deploy State, for this example, an RFC will be generated. This RFC will be assigned the Change Deployment Workflow and be assigned to the Change Team. When the RFC is assigned the Status of Deployed the Deployment Task will move from Pending to Open, allowing the Team member from within the Software Deploy Group of the Release Team to action the Deployment Task.

8. Select the Item Type to be upgraded in the Deployment

If an Item Type is not displayed in the list, click 🕥 to search the CMDB.

| Release - Update Microsof | t Exchange | |
|---------------------------|---------------------------------------------|---------------|
| Details | Item Types Analysis Elements Deployments | |
| Deployment | | |
| Group | Software Deploy Grout | |
| Deploy Status | Trial Deploy 🗘 | |
| Details | | |
| Items | 式 Q | Display: 10 🛟 |
| | Item Number ≜ Item Type ≣ Status ≣ Customer | Org.Unit |
| | ✓ 100015 Exchange Pending Upgrade | My Company |
| | 1 - 1 of 1 Results | |
| | Cancel | Create |

9. Click 📷

The selection is displayed in the Select Items window to the right of the main window. If an incorrect assignment has been made, click

10. Click Create

| D | etails Item Types | Analysis | Elements | Deployments | | | |
|--------|--------------------------------------------------------|----------|--------------------|-------------|-------------|-------------|----|
| Nev | N | | | | | Display: | 10 |
| ld | <u>≜</u> Title | ≣ Status | E Deploy Status | ≣ #Tasks | # Completed | Control RFC | |
| 100016 | Update Microsoft Exchange Deployment for My Company | Open | Deploy | 1 | 0 | | |
| | | | 1 - 1 of 1 Results | | | | |

11. Click Done.

All Tasks are now saved with a Status of Pending assigned. When the Release Workflow moves to the Deploy State an RFC will be created. When the RFC hits the Release's RFC Control Deploy State the Tasks' Status will automatically be updated to Open, prompting Technicians to complete the Deployment Tasks and move the State to Closed-Resolved. When all Tasks are completed and moved to Closed - Resolved, the Release will be automatically Closed.

1.54.7 RFC Creation and Management

The Release Manager moves the Release through the lifecycle of the Workflow as activities are completed. For this example, within the Releases>Release#>Details tab the Release Manager has moved the Release through the Workflow States of Plan, Plan Approval, Build, Test and is currently assigned the State of Deploy Approval. Selecting Accept will move the Release to Deploy, and an RFC will automatically be created.

From the above RFC, we can see that the Change Team has been assigned the RFC, and they will move the Request through the Change Deployment Workflow.

This Workflow includes the stages of Pending>Approval>Schedule Outage>On Hold>Deploy>Closed. When the RFC is assigned the Deploy State, the Deployment Tasks created in the Release, and now available in the Change>Deployment Tasks tab, will move automatically move from Pending to Open, and the assigned Technician can action the Task before moving the Deployment Task State to Closed - Resolved.

| yment Task l | nformation | | | |
|--------------|-----------------|-------------|-----------------------|------------------------|
| Summary | | | | |
| | | | | Deployment Task # 1000 |
| ltem | | Release | | |
| Number | 100015 | Workflow | Release Workflow | |
| Туре | Exchange | Team | Release Team | |
| Version # | 2007 | Manager | Simone Supervisor | |
| Status | Pending Upgrade | Status | Deploy | |
| Reason | Update | Details | | |
| Affects | | Group | Software Deploy Group | |
| Org. Unit | My Company | Technician | Carla Parsons | + |
| | | Status | Closed - Resolved | |
| | | Next Status | ✓ Open | |
| | | FSC Date | 0.0 | |

When the Task Status is set to Closed-Resolved, the updated Details contained in the Release will automatically be updated on the relevant Item in the CMDB. The Change Manager can view all Deployment Tasks related to the RFC within the RFC Summary screen, and when all Tasks are moved to Closed-Resolved the Change Manager can close the related RFC. When the Deployment Task is completed, the Deployment within the Change > Deployments tab is automatically closed by the system.

| Deployment - Upd | ate Microsoft Exchange Deployment for My Company | |
|------------------|-----------------------------------------------------|---|
| Details | Tasks | |
| Name | Update Microsoft Exchange Deployment for My Company | 1 |

1.55 Release Workflow

Release Workflows define the sequence of States to be followed for Releases logged within the Change>Release tab. By default the system includes one Release Workflow that can be adjusted to suit the service organization's requirements. There is no limit to the number of fully configurable Release Workflows that can be created in the system, so the diverse range of business release implementations required by an organization can be covered by the service and support organization.

1.55.1 Approval States

Approval States in Release Workflows provide the facility for Release Managers that have been assigned to the Approval State, to accept or reject Release activity. If Release Managers are to be assigned to an Approval State, then it is not possible for other User Roles to also be assigned to that State. It should be noted that a Technician, Supervisor or Partner user can also be assigned a Manager Role, which will allow them to be assigned to Manager Only Approval States.

For more information about Manager assignment to Approval States, see:Release Teams.

1.55.2 Editing the Default Workflow

To edit or duplicate the default Release Workflow:

- 1. Select Service>Workflows
- 2. Click the Release Workflow hyperlink to modify the template details or copy the Workflow

| Workflow - Release | se Workflow |
|-----------------------|------------------------------------------|
| Workflow | Lifecycle |
| Duplicate | |
| Workflow Name | Release Workflow |
| Process | Release |
| Default Open Status | Plan 💌 |
| Default Closed Status | Closed |
| Description | Configurable Release Management workflow |
| | |
| | |
| | |
| | |
| | ÷ |
| | Cancel Save |

3. Click Edit, to amend or duplicate the Workflow

Fields in the following table are now editable

| Field Name | Description |
|-----------------------|------------------------------------------------------------------------------------------|
| Workflow Name | Enter a relevant name for the Workflow. |
| Process | Release Management is assigned as the Workflow Process. |
| Default Open Status | The open State that a Release automatically applie when it is assigned the Workflow. |
| Default Closed Status | The Exit State that indicates the Release has reached the end of the Workflow Lifecycle. |
| Description | Defines the purpose of the Workflow. |

- 5. Click Duplicate, if the default Workflow is to be copied
- 6. Amend the Release Workflow details as required
- 7. Click Save

8. Select the Lifecycle tab to create or modify Workflow States

1.55.3 Adding or editing Workflow States:

1. Click the State field in the Workflow map or State name hyperlink to display the Status information screen

Or, click New to create a new Workflow State.

| Workflow - Release Workflow | | | | | | | |
|-----------------------------|---------------------------------------------------------------------------|--------|----------|---------|--|--|--|
| Workflow | Lifecycle | Status | | | | | |
| Status | | | | | | | |
| Name | New Status | | | | | | |
| Active State | 🖲 Yes 🛛 No | | | | | | |
| Approval State | 🔘 Yes 🛛 🔍 No | | | | | | |
| Deployment State | 🔘 Yes 🛛 💿 No | | | | | | |
| Entry Point | | | | | | | |
| Exit Point | | | | | | | |
| Has Notes | | | | | | | |
| Previous States | | | | | | | |
| | Available states | | Selected | states | | | |
| | Build Deploy Deploy Approval Plan Plan Approval Rework | | None Se | elected | | | |
| Next States | | | | | | | |
| | Available states | | Selected | Istates | | | |
| | Build Closed Deploy Deploy Approval Plan Approval Rejected | Ē | None se | elected | | | |
| | | | Cancel | Save | | | |

| Status | | |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Name | System Default States can be re-named if desired. For newly created States, enter a name. | |
| Active State | Assign Yes for requests to be available in the Home tab by default, when assigned to this stage of the Workflow. | |
| | Yes should be used for States where the User is actively working on the request or waiting for updates." No" generally applies to Workflow exit points and will only be available by default within the Release tab list view. | |
| Approval State | Sets the Status as an Approval State. This allows Release Manager to be assigned to this State and enables them to approve or reject Release Activity when it moves into this stage of the Workflow. | |
| | NOTE: An Entry/Exit status cannot be an Approval State. | |
| Deployment State | If enabled for a State, when a Release is assigned this State the Deployment Tasks associated with the Release can be actioned by the Technician Users. | |

| Status | | | |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Entry Point | An Entry Point is used to indicate the start of a Lifecycle. To make the State a Workflow Entry Point, select the Entry Point checkbox. | | |
| | As the Entry Point is the first State, the Previous States field will be removed. | | |
| Exit Point | Select if the State will be an Exit Point. An Entry Point is used to indicate the end of a Lifecycle. | | |
| | NOTE: A Workflow can have only one Entry Point but multiple Exit Points. | | |
| Has Notes | Allows the Supervisor to include instructions or add relevant details to the Workflow that is made available when the Release moves into the State. The information is configured within the Notes tab that is displayed when this option is enabled. | | |
| | Information and attachments included on the Notes tab, are displayed as a scroll-over when the Release moves into the State. | | |
| Listener Class | This field is visible if the Outbound Webservices option is enabled in the Admin>Setup>Privileges>System tab. | | |
| | Complete this field, if assigning this State to a request is to trigger an event in an external system. | | |
| | This field should contain the name of a Java class that implements the interface com.livetime.ws.listenWorkflowListener that has been compiled into a jar file and added to the LiveTime classpath. Please contact support for further details. | | |
| Previous States | If the State is not an Entry Point, Previous States can be assigned to the Workflow stage. Highlight the relevant State and use the arrow button to move Available States to the Previous States field. These options designate the Workflow stages a Release can come from, before it arrives in this Workflow State. | | |
| Next States | If the State is not an Exit Point, Next States can be assigned to the Workflow state. Use the arrow button to select the Next States from the Available States. These options are included in the Next Action drop-down menu of a Request. | | |
| Accept State | (Visible when the Approval State option is Yes.) | | |
| | Displays the States that a Request can move to when a Release action is Accepted. Select the appropriate State, for the system to automatically route the Release when the Accept option is selected. | | |

| Approval | (Visible when the Approval State or KBA Approval option is Yes.) |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | Displays the States that a Request can move to when a Request action is Accepted. Select the appropriate State, for the system to automatically route the Request when the Accept option is selected. |
| | Team Manager, select if a single Manager User assigned to the Team is to process the Request. |
| | Team Managers# if selected, set the number of Managers that are required to Approve the Request before the system will automatically apply the defined Accept or Reject State. |
| | Team Managers% if selected, set the percentage weighting that must be achieved by Managers voting before the system will automatically apply the defined Accept or Reject State. When selected, define the percentage weighting. |
| Reject State | (Visible when the Approval State option is Yes.) |
| | Displays the States that a Release can move to when a Release activity is Rejected. Select the appropriate State, for the system to automatically route the Release when the Reject option is selected. |

- 2. Configure the State details, as required
- 3. Save the updated State details

NOTE: It is recommended that all States that are to be included in the Workflow be added or renamed now

After all States have been entered in the system, the mapping of the Workflow can be more easily achieved.

- 4. Continue to edit, add or delete States until all relevant States exist for the Workflow
- 5. To create the Workflow Lifecycle, States need to be assigned to the transitional states of Previous and/or Next

To move Available States to the Previous State or Next State field, open the Status Details screen by clicking the State object in the Workflow map or select the State hyperlink in the table beneath the Workflow map.

6. Assign States to be Next and/or Previous States

For the Current Status highlight an option in the Available State list and click the right-pointing arrow to move it to the Selected States field.

NOTE: When a State is used as a Previous and a Next State, it allows a request to move forward and backward in a Lifecycle

An Open State cannot have any previous States and a Closed State cannot have any Next States.

- 7. Click Save to return to the Workflow map and to access other States to build on the Workflow lifecycle.
- 8. Repeat Steps 12 to 14 until all transitional stages of the Workflow have been mapped.

NOTE: To successfully save a Workflow, the sum Resolution Time of the individual Contract Types assigned to each transitional state of the Workflow Lifecycle, must be less than or equal to the Workflow's SLA Resolution Time

9. Click Save.

The visual representation of the Workflow is displayed.

1.55.4 Workflow Map

The Workflow Map is a visual representation of the Workflow Lifecycle. The map displays the relationship between each Lifecycle State by using different colors to represent the type of Lifecycle State.

| Color | | |
|--------|---------------------------------------------|--|
| Blue | Indicates the Entry point of the Lifecycle. | |
| Orange | Is a Transitional stage of the Lifecycle. | |
| Red | Indicates the Exit point of the Lifecycle. | |

Detailed information about a Lifecycle State can be accessed by clicking on the State field within the Map.

1.55.5 Deleting the default Release Workflow

To delete the default Release Workflow:

1. Select Service>Workflow

The Workflows screen appears.

- 2. Select the checkbox to the left of the Release Workflow
- 3. Click Delete

The checked Workflow is no longer visible.

NOTE: A Workflow that belongs to a Team cannot be deleted.

1.55.6 Deleting a Workflow State

It may be necessary to delete a system default State or a State that is no longer in use. Note that a State cannot be deleted if it has been assigned to a Release.

NOTE: It is recommended that any States listed in the table of States included on the Life Cycle tab that are not included in the Workflow or used by the system, be removed from the table as all States included here are listed in the States tab when Workflow Manager assignment is being configured. By removing unused States from the table, assigning Technicians to the relevant stages of the Workflow becomes an easier task.

To delete an unused State:

- 1. Select Service>Workflows
- 2. Click on the Workflow hyperlink
- 3. Move to the Lifecycle tab
- 4. Select the State name link in the table of States included in the Lifecycle tab
- 5. Click Delete
- 6. Click Done.

1.56 Basic Procedures

All sections throughout the application use a uniform system for creating, editing and deleting elements. Whether you are working with requests, Customers, Items or Item Types, the procedure for creating, editing or deleting existing elements is the same.

1.56.1 Mandatory Fields

When entering details relating to any element throughout the system, required information is marked with a *I*.

| Customer Information | | | | |
|----------------------|-----------------|-------|--|--|
| Contact | Aliases | Items | | |
| Access | | | | |
| Title | | - | | |
| First Name | Mandatory field | | | |
| Last Name | | | | |
| Username | | | | |

I Denotes Mandatory fields

1.56.2 Creating an Element

To create an element:

1. Navigate to the appropriate section

For example, if you want to create a Customer, navigate to the User>Customers section.

2. Click New in the upper left-hand corner of the list of Customers

This will open a new Customer window.

- 3. Fill in the appropriate details
- 4. Click Save

The new Customer now exists in the system and will appear in the list of Customers.

1.56.3 Editing an Element

To edit an element:

- 1. Navigate to the appropriate section
- 2. Click the Entry link in the list

For instance, to edit a Customer, navigate to the User>Customers section and click on the Customer name hyperlink. This will open up the Customer's details screen.

| Cu | Customers | | | | | | | |
|----|----------------|-----------------|------------------------|-----------------------------------------|---------|---------------------|--------------|---|
| | New | ⊖ Search Bulk | Export: Current Page 💌 | ¥ | Filter: | All Customers [sys] | Display: 100 | • |
| | Customer Name | Email Address | Phone | Org. Unit | Country | Roles | Web Access | |
| | Michael Angelo | michael@nsd.com | | Micro Focus - Head Office | | Customer | Enabled | - |
| | Jason Blackett | jason@nsd.com | | Micro Focus - Information Technology | | Customer | Enabled | |

- 3. Click Edit in the upper-left corner of the window to enter Edit mode
- 4. Update the necessary information
- 5. Click Save

The changes will now take effect and the User will be returned to the list.

1.56.4 Deleting an Entry

To delete an entry:

1. Navigate to the appropriate section

NOTE: Technicians do not have the ability to delete requests or Customers

1. Click the link in the list corresponding to the entry to be deleted

For instance, to delete a Customer, navigate to the User>Customers section and click on the Customer you want to delete. The Information screen opens.

2. Click Edit in the upper-left corner of the window to enter Edit mode

3. Click Delete at the bottom of the section.

The entry is now deleted and the User will be returned to the list.

1.56.5 Exporting to PDF and Excel

Most lists within the system can be exported to PDF and/or Excel. This functionality is available wherever the PDF and/or Excel buttons are visible.

NOTE: To customize the view of an Excel export, create a list view with the preferred columns, use the view and select the Excel button. See List Views for more information on customizing a list.

1.56.6 Formatting Print Views

Enable the print background setting on your web browser for better formatted and more User-friendly hard copies of request summary screens print views. Using Internet Explorer this setting is found in: Tools>Internet Options>Advanced>Printing>Print background colors and images.

1.57 List Views

Application List Views are pre-sorted by ID #, and default to display ten Incidents per batch. A List can be re-sorted by clicking on a column header, and the number of elements displayed per batch can be changed using the Display pop-up option.

List Views allow Users to customize the list displayed for each screen within the application. When a List View is created, the screen editor will display only the relevant columns for the module being customized. For example, when creating an Item List View, the available columns will include only Item information.

The system includes at least one default List View for each screen within the application. These Views cannot be edited, however additional Views can be created.

To access details regarding the List View field options throughout the application, refer to:

- Home, Operations and Change tab
- Configuration tab
- Users tab
- Knowledge tab.

1.57.1 Create a List View:

As an example we will create a List View for the Incident screen.

1. Select Operations>Incident

The Incidents screen appears

- 2. Select available on the far right of the screen
- 3. Click New

| Views Editor | | |
|--------------|--------------|------------|
| Name | | |
| Shared | No OBy Role | O By Team |
| Column 1 | Request # | v |
| Column 2 | Not Included | • |
| Column 3 | Not Included | • |
| Column 4 | Not Included | |
| Column 5 | Not Included | |
| Column 6 | Not Included | |
| Column 7 | Not Included | • |
| Column 8 | Not Included | • |
| Column 9 | Not Included | • |
| Column 10 | Not Included | • |
| Column 11 | Not Included | |
| Column 12 | Not Included | |
| Column 13 | Not Included | • |
| Column 14 | Not Included | • |
| Column 15 | Not Included | • |
| | c | ancel Save |

4. Enter the View Name and specify if the View is to be shared by other Users or between Team members

Shared Views allow other Users to apply the List View to their screen but does not permit them to edit it.

5. Select at least 8 columns

This only applies to the request list screens, all other screens require at least 6 columns.

6. Click Save.

NOTE: Create a List View that includes New Tasks and New Notes to use as the default request screen in order to have a visual cue when new Notes and requests are created.

| Lis | List Views | | | | | | |
|-----|-----------------------|---------|--------------------|----------|---------|-----------------------|---|
| | New Duplicate | | Done | | | | |
| | View Name | Columns | Owner | Shared | Default | Use View | ≣ |
| | System Incident View | 12 | System User | <u> </u> | | System Incident View | |
| | Service Delivery View | 12 | System User | A | | Service Delivery View | |
| | | | 1 - 2 of 2 Results | | | | |

1.57.2 Selecting a List View as the Default View

To use the same List View each time a screen is displayed, select the List View to be the default view. To do this:

- 1. Select , displayed on the far right of the screen
- 2. Click the 📕 button in the Default column
- 3. The icon will then change to a 👤, indicating that it has become the default
- Select Done to view this List.
 From this point, this will be the default List View for the selected screen.

1.57.3 Displaying a Different List View

To use a different List View:

- 1. Select , displayed on the far right of the screen
- 2. Select the link in the Use View column.

1.57.4 Editing a List View Column

To edit a List View, and change the columns:

- 1. Select , displayed on the far right of the screen
- 2. Select the link in the View Name column
- 3. Make the required changes
- 4. Click Save.

1.57.5 Duplicating a List View

To fast-track the creation of similar List Views, a List View can be duplicated. To duplicate a List View:

- 1. Select, available on the far right of the screen
- 2. Click the checkbox beside the View Name to duplicate
- Click the Duplicate button
 The List View Editor appears with the columns of the original List View.
- 4. Complete the List View name

- 5. Modify the columns as required
- 6. Click Save.

To access details regarding the List View information options throughout the application, refer to:

- Home, Operations and Change tab
- Configuration tab
- User tab
- Knowledge tab.

1.58 List View Options for all Request Types

The List View options are derived from the database fields and can be customized by selecting within the My Tasks Home tab, Service Request, Incident or Problems screens within the Operations tab and the Change tab list view.

The options within the Home, Operations and Change tabs are detailed in the following table:

| | Description |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| # Attachments | Displays the total number of Attachments assigned to the request. |
| # Notes | Displays the total number of Notes assigned to the request. |
| % SLA Remaining | Displays the percentage of time available before the SLA expires. |
| Classification | Shows the Classification assigned to the request. |
| Client Room | Displays the Room where the Customer can be located. |
| Close Date | Specifies when the request was moved first moved into an Exit State of the Workflow. |
| Created | The date when the request was first logged with the system. |
| Customer | The name of the person for whom the request was logged in the system. |
| Customer Item | The identification number of the Configuration Item associated with the Customer. (This is especially relevant when Item Shadowing is enabled for the Customer Portal and a request is logged against an Item that is different to the Customer's Item.) |
| Customer Item Type | The Item Type associated with the Customer Item. |
| Customer Solution | Shows the Customer Note when they use the Close option on the Customer Portal. |
| Description | Displays the initial information logged for the Customer's request. |

| | Description |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Due Date | Typically based in the SLA and Priority assigned to the request, but in some cases may be manually overwritten. |
| Escalation | is visible when the Escalation option is On for the request. |
| Group | Displays the Group identification number, if the request is assigned to a request group. |
| IP | Shows the ITIL process that the request belongs to: |
| | Incident Management; |
| | Problem Management; |
| | Change Management; |
| | Request Fulfillment |
| Identifier | Shows the Identifier field information of the Item assigned to the request. |
| Impact | Shows the Impact associated with the request. This is usually derived from the Criticality of the Item, but can be adjusted manually on a request. |
| Item | Shows the identifying number of the Item assigned to the request. |
| Item Category | Shows the Category name of the Item assigned to the request. |
| Item Criticality | States the Criticality of the Item as defined in the CMDB. |
| Item Room | Displays the Room details to which the Item is assigned. |
| Item Status | Displays the stage of the Item Lifecycle that the Item is assigned. |
| Item Type | Shows the Type name of the Item assigned to the request. |
| Last Action | Details the date that action was last recorded against the request. |
| Layer | Details the Escalation Layer/level or work group assigned to the request. |
| Logged Time (mins) | Shows the total time recorded against the request. |
| Logged by | Shows the name of the person logged the request with the system. |
| New Note | is visible when a new Note is added to a request and has not been opened by the assigned Technician. |

| | Description |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| New Task | is displayed when a new request is added to the List View. |
| Number of Affected Users | Displays the number of Customers associated with the Item assigned to the request. |
| Open Date | Details the date the request was first logged in the system. |
| Open Time | Details the time the request was first logged in the system. |
| Org. Unit | The name of the Organizational Unit to which the Customer is assigned. |
| Priority | Shows the Priority setting for the request. |
| Request# | The identifying number for the request. |
| Restore Date | Shows the date the request was moved into a Workflow State where the SLA Restoration option is set to Yes. |
| SLA | Displays the Service Level Agreement assigned to the request. |
| Source | Displays if the request was created via Email, Portal, Widget, Phone (Technician) or Web Service. |
| Status | Shows the stage of the request Workflow that the request is assigned. |
| Subject | Shows content entered in the Subject field of a request. Usually derived for the Subject line of requests created via email, if not populated manually. |
| Team | Shows the Team assigned to the request. |
| Technician | Displays the name of the Technicians assigned to the request. |
| Urgency | Shows the Urgency associated with the request. |
| Warning Sent | is visible if an SLA Warning has been sent to the Technician assigned to the request. |
| Workflow | Details the Workflow assigned to the request. |

If Custom Fields have been enabled for a Request Type in Admin>Setup>Custom Fields, they will also be available in the Views Editor drop-down list options.

1.59 List View Options: Configuration Tab

The List View options are derived from the database fields and can be customized by selecting swithin the Configuration tab.

The options within the Configuration Tab are outlined in the following table.

| | Description |
|-----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| # Users | Displays the number of Users assigned to the Item. |
| % SLA Uptime | Displays the percentage uptime expectation of the SLA assigned to the Item. |
| % Uptime | Shows the actual uptime of the Item, based on the time the Item is associated with Active Lifecycle States. |
| Avg Repair Time | Entries displayed here are automatically calculated based on the average length of time an Item is offline. |
| Avg Time to Fail | Figures displayed here are automatically calculated based on the average time between an Item being offline. |
| Change Team | Shows the Change Team assigned to the Item. |
| Child R'Ships | Displays the number of Child Relationships associated with the Item. |
| Contract | Displays the Contract Number associated with the Item. |
| Contract End Date | Displays the date a Service Contract period ended. |
| Contract Expiry | Shows the date that a Service Contract is due to expire. |
| Cost | Displays the value entered in the Costs field. |
| Criticality | States the Criticality of the Item as defined in the CMDB. |
| Current Month Costs | Uses the Charges figure within the Service Item Costs tab, multiplied by the number of Users and days of month passed, to calculate the month to date cost figure. |
| Current Month Revenue | Uses the Revenues figure within the Service Item Costs tab, multiplied by the number of Users and days of month passed, to calculate the month to date revenue figure. |
| Customers | Lists Customers assigned to the Item. |
| Deleted Date | Shows the date the Item was deleted from the CMDB. |
| Depreciated Value | Displays the figure entered in the Depreciated Value. |
| Identifier | Shows the Identifier field information of the Item assigned to the request. |
| Incident Team | Shows the Incident Team assigned to the Item. |
| Item Category | Shows the Category associated with the Item. |
| Item No. | Displays the identifying number for the Item. |
| Item Type | Shows the Item Type associated with the Item. |
| Manufacturer | Displays the Manufacturer name. |

| | Description |
|------------------------|---------------------------------------------------------------------------------------------------------------------------|
| Open Requests | Shows the number of requests assigned an Active Status, associated with the Item. |
| Org. Units | Lists the Org. Units associated to the Item. |
| Parent R'Ships | Displays the number of Parent Relationships associated with the Item. |
| Previous Month Costs | A reference figure for an average monthly cost, based on the previous months costs for the Service Item. |
| Previous Month Revenue | A reference figure for an average monthly revenues, based on the previous months revenue for the Service Item. |
| Problem Team | Shows the Problem Team assigned to the Item. |
| Purchased | Displays the date entered in the Purchased field. |
| Request Team | Shows the Service Request Team assigned to the Item. |
| Room | Displays the Room associated with the Item. |
| Service Components | For Service Items, the Item Number and Type is displayed for other Service Items related as Children for this Item. |
| Service Level | Shows the Service Level Agreement assigned to the Item. |
| Status | Displays the stage of the Item Lifecycle that the Item is assigned. |

1.60 List View Options: Users Tab

The List View options are derived from the database fields and can be customized by selecting within the Customers, Organizational Units, Partner Organizations and Users tab.

The options within the Users Tab are outlined in the following tables:

1.60.1 Customers List View options:

| Customers | Description |
|---------------|------------------------------------------------------------------------------------------------------------------|
| Contract # | Displays the Contract Number associated with the Customer. |
| Country | Shows the Country assigned to the Customer's account. |
| Custom 1 to 5 | Shows the Custom Fields that have been configured in the Admin>Setup>Custom Fields tab for Customer Information. |
| Customer Name | Displays the Customer's name. |

| Customers | Description |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Date Added | Displays the date the Customer account was first created. |
| Email Address | Shows the Customer's email address as a link that can be clicked to open a New Message email window. |
| Email Locale | Displays the language file associated with the Customer for automated system correspondence. |
| FAX | Includes the Customer's facsimile number. |
| Last Login | States the time and date when the Customer last logged into the system. |
| Last Logout | States the time and date when the Customer last logged out of the system. |
| Ldap Source | When multiple LDAP servers are synchronized with the system, this will display the LDAP details from where the Customer information is sourced. |
| Line Manager | Shows the name of Manager User associated with the Customer, which maybe relevant when seeking approvals for Service or Change Requests. |
| Local Time | Displays the local time for the Customer. |
| Mobile | Includes the Customer's mobile number. |
| Notes | Displays information recorded in the Notes field of the Customer Information screen. |
| Open Requests | Shows the number of requests assigned an Active Status, logged by the Customer. |
| Org. Unit | Displays the Organizational Unit assigned to the Customer. |
| Owned Items | Lists the Item's assigned to the Customer by showing the Item Numbers. |
| Pager | Includes the Customer's pager details. |
| Phone | Includes the Customer's telephone number. |
| Roles | Lists the Roles the Customer has been assigned within the system |
| Room | Displays the Room assigned to the Customer. |
| User Name | Displays the User Name access credentials for the Customer's account. |
| Web Access | Shows the Customer setting for the Web Access option. |

1.60.2 Organizational Units and Partner Organizations List View options:

| Org. Units | Description | |
|-----------------------|-------------------------------------------------------------------------------------------------------------------|--|
| # Customers | Shows the number of Customers associated with the Org. Unit. | |
| City | Shows the City details for the Org. Unit. | |
| Contract # | Displays the Contract Number associated with the Org. Unit. | |
| Country | Shows the contact telephone number for the Org. Unit. | |
| Custom 1 to 5 | Shows the Custom Fields that have been configured in the Admin>Setup>Custom Fields tab for Org. Unit Information. | |
| Name | Details the Organizational Unit's name. | |
| Org Unit Email | Shows the Org Unit's email address as a link that can be clicked to open a New Message email window. | |
| Phone | Shows the contact telephone number for the Org. Unit. | |
| Primary Contact | Shows the name of the Customer who has been assigned as the point of contact for the Organizational Unit. | |
| Primary Contact Email | Shows the Primary Contact's email address as a link that can be clicked to open a New Message email window. | |
| Service Level | Displays the Service Level Agreement assigned to the Org. Unit. | |
| State | Displays the State information for the Org. Unit. | |
| Website | Displays the Org. Unit's Website details. | |
| Zip | Shows the contact telephone number for the Org. Unit. | |

1.60.3 Users List View options:

| Users | Description | |
|-----------------|--------------------------------------------------------------------------------|--|
| Active Requests | Shows the number of requests assigned an Active Status, allocated to the User. | |

| Users | Description |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Available | Includes a visual icon to easily identify if the User is available within the system for request allocation: |
| | The User is not on leave and is available for request assignment based on their assigned work hours. |
| | The User is not on leave but is not available for request assignment based on their assigned work hours. |
| | : The User has the On Vacation option enabled. |
| Classifications | Lists any Item Classifications that have been assigned to the User within the Skills tab. |
| Custom 1 to 5 | Shows the Custom Fields that have been configured in the Admin>Setup>Custom Fields tab for User Information. |
| Date Added | Displays the date the Customer account was first created. |
| Default Items | Lists any Items that have been assigned to the User within the Skills tab. |
| Default Portal | For Users assigned multiple Roles within the system, this field will display which Portal the User accesses by default when they log into the system. |
| Email Address | Shows the User's email address as a link that can be clicked to open a New Message email window. |
| FAX | Includes the User's facsimile number. |
| Last Login | States the time and date when the User last logged into the system. |
| Last Logout | States the time and date when the User last logged out of the system. |
| Ldap Source | When multiple LDAP servers are synchronized with the system, this will display the LDAP details from where the User information is sourced. |
| Line Manager | Shows the name of Manager User associated with the User, which maybe relevant when seeking approvals for Service or Change Requests. |
| Mobile | Includes the User's mobile number. |
| Name | Shows the User's name. |
| Pager | Includes the User's pager details. |
| Phone | Shows the contact telephone number for the User. |
| Processes | Lists the ITIL Processes the User has access to within the system. |

| Users | Description |
|------------|--------------------------------------------------------------------------------|
| Roles | List the Roles the User has been assigned within the system. |
| Supervisor | Shows the assigned Supervisor for Users assigned a Technician or Partner Role. |
| Teams | Lists the service Teams the User has been assigned to. |
| Username | Displays the User Name access credentials for the User's account. |

1.61 List View Options: Knowledge Tab

The List View options are derived from the database fields and can be customized by selecting () within the Knowledge Tab.

The options within the Knowledge Tab are outlined in the following table:

| | Description |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Age | Based on when the content was created, shows the age of the Article or FAQ. |
| Article No. | The identifying number for the Article or FAQ. |
| Classification | Shows the Item Classification assigned to the Article or FAQ. |
| Created | Displays the date when the Article or FAQ was created. |
| Custom 1 to 5 | Shows the Custom Fields that have been configured in the Admin>Setup>Custom Fields tab for Customer Information. |
| Item Type | Shows the Item Type assigned to the Article or FAQ. |
| Last Updated | Displays when the Article or FAQ was last updated. |
| Mean Rating | Displays the mean score rating for helpfulness of the Article or FAQ. |
| Owner | The User who created the Article or FAQ. |
| Status | Details the stage of publication the Article or FAQ is assigned (i.e., In Development, Pending Publication, Published or Archived.) |
| Summary | Shows the information recorded in the Summary field of the Article, or the Question field of an FAQ. |
| Title | Displays the Article Title. |
| Туре | Shows the Item Type assigned to the Article or FAQ. |
| View Date | Displays when the Article or FAQ was last viewed. |
| Views | Details the number of times the Article or FAQ has been viewed by a Customer. |

| | Description |
|------------|---------------------------------------------------------------------|
| Visibility | Shows who can access the Article or FAQ in the Knowledge Base. |
| Votes | Shows the total number of votes recorded against an Article or FAQ. |

If Custom Fields have been enabled for a Articles in Admin>Setup>Custom Fields, they will also be available in the Views Editor drop-down list options.

1.62 Administrator View

| ी User | Reports | የ My Account | 🚳 Setup | CMS |
|-----------------|-------------|--------------|---------|-----|
| Customers Users | Assignments | | | |

Users with the Administrator Role can configure the customized settings within the application, enable or disable privileges and control the synchronization with third party tools.

The Administrator view has five tabs:

- User Allows the User to create accounts for Users and Customers, and also define User assignment templates for adding Users to multiple Teams and Escalation layers within the User Information screen
- Reports Provides the Administrator with real time System and Login reports. System logs can also be downloaded in the screen
- My Account The Administrator can view and configure their account details or create Alerts
- Setup Allows the Administrator to define how Customers and Users can interact with the system, customize the application and synchronize it with third party tools
- Configuration Management System Provides configuration access to Relationship Types, Warranty Durations and the Incident Analyzer, for Problem Management.

If an Administrator is assigned other User Roles within the system, they can access the Admin Portal when logged in using the different Role, by selecting the Setup link within the sub-menu bar of the User login screen or the Customer Portal Menu options.

1.63 User

The User tab is used to create, modify and view accounts for:

- Customers
- Organizational Units
- Users
- Teams.

Users within the service management system can have one of the following Roles:

- Technician
- Supervisor
- Partner.

and one or more of:

- Administrator
- Finance
- Manager
- Customer.

If a User is assigned multiple Roles, the User Roles of Supervisor or Technician, Finance and Manager are consolidated within one User view. Therefore, if a User is assigned Finance, Manager and Supervisor/Technician access, they can view all functionality related to these Roles within the User view. If the User is also assigned Admin and Customer access, next to their login name, the options of Setup and Customer will be displayed. See Changing Roles.

The Supervisor can create User accounts within the User >Users tab.

The system Administrator can synchronize the system with a Directory Server to import Customer and User details. Imported Users can only be modified through the appropriate server console, not via the application. For further details about this topic refer to the Authorization section within the Administrator Guide.

Alternatively, the Administrator can also import Customers via a .CSV file.

2 Users

2.1 User Tab

| ያ በ | ser | ि Reports १ My Account | | త్తో Setup | 🛆 смѕ |
|-----------|-------|------------------------|--|------------|-------|
| Customers | Users | Assignments | | | |

The User tab is used to create, modify details for:

- Customers
- Users
- Assignments

Users can be assigned one of the following Roles:

- Technician
- Supervisor
- Partner.

and one or more of:

- Administrator
- Customer
- Finance
- Manager.

When a User has more than one Role, they can switch between Roles easily by selecting the Setup, User or Customer link displayed in the sub-menu bar next to their login Name. See Changing Roles.

2.1.1 User Availability

The User List View includes the User Availability status by default, this is based on work hours configured in the Schedule tab of the User and their Vacation Status.

The following icons may be displayed in the List View:

| Available | |
|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | The User is not on leave and is available for request assignment based on their assigned work hours. |
| | The User is not on leave but is not available for request assignment based on their assigned work hours. |
| | Or, if no hours are set within the Schedule tab when the "Define Work Hours" is enabled within Admin>Setup>Privileges>User screen and the User is not on vacation, the system will consider Users to be unavailable. |

Available

V

The User has the On Vacation option enabled.

An Administrator can synchronize the system with a Directory Server to import User details. Imported Users can only be modified through the appropriate server console, not via the application. See Authentication.

Alternatively, the Administrator can also import Customers via a .CSV file.

NOTE: If new User accounts are to be created directly in the system, new Administrator Users can only be created within the User tab of the Administrator Portal.

2.2 Customers

2.2.1 Customers

The Customers tab is used to create, modify and delete Customer Accounts within the system.

A Customer is a User assigned the Customer Role. They can be internal or external to the organization. Customers can raise requests, update, and if relevant approve requests, through the Customer Portal or via email. Service Desk staff can also generate requests on behalf of the Customer.

Customers can be created within this tab, imported from a CSV file, or imported and synchronized using a directory server. See Authentication.

NOTE: If Customers are imported using a directory server and the mixed mode authentication method is disabled, the option to create Customers within the Users tab is not available.

| Customers | | | | | | | |
|-------------------|-----------------|------------------------|-----------------------------------------|---------|---------------------|--------------|---|
| New \bigcirc Se | earch Bulk | Export: Current Page 💌 | r. | Filter: | All Customers [sys] | Display: 100 | • |
| Customer Name | Email Address | Phone | Org. Unit | Country | ≣ Roles | Web Access | ≣ |
| Michael Angelo | michael@nsd.com | | Micro Focus - Head Office | | Customer | Enabled | * |
| Jason Blackett | jason@nsd.com | | Micro Focus - Information Technology | | Customer | Enabled | |

If using Organizational Units (configured by a Supervisor User) or Customer Custom fields (configured by an Administrator User), it is recommended that these be configured prior to creating Customers.

See: Creating a Customer Account (Internal Authentication)

See: Importing Customers Using a CSV File

See: Importing Customers using LDAP/Active Directory Server.

2.2.2 Creating a Customer (Internal Authentication)

Use the Customer Information Tab to view and edit Customer details. It is also possible to set Customer Roles, line managers and default login details.

Creating a Customer Account

When creating a Customer, the following four tabs are available:

- Contact
- Aliases
- Items
- Contracts.

Information Tab

This tab is used to enter contact information for a Customer, when creating a new customer account.

NOTE: If Custom Fields are to be created for Customer Information it is recommended that the Administrator complete the configuration prior to creating Users. See Custom Fields.

To create a Customer account using internal system authentication:

- 1. Select User>Customers
- 2. Select New
- 3. The Customer Information screen appears, with the following fields:
- 4. _____

| Customer Information Fields | |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Access | |
| Title | If enabled, select the appropriate title from the drop- down options. (This field is displayed if the Enable Titles option is set to Yes in the Admin>Setup>Setup>Privileges>Customer tab.) |
| First Name* | Customer's First Name. |
| Last Name* | Customer's Last Name. |
| User Name* | The login User name credentials for the User. If this is imported via LDAP or Active Directory, it can not be edited. Otherwise, enter a Username. Note that the value must be unique. |
| Password/ Confirm Password | The Default Password is set to the Customer's email address or a random string can be enabled by the Administrator in Setup>Privileges>System. See Authentication. |
| | Customers can reset their password from the Customer Portal, or a Service Desk User can reset it in the customer account details using the Reset Password button through the Customer> Information tab. |
| Web Access | Web Access allows Customers to view their account information and Incidents via the Customer Portal. |
| Contact | |

| Customer Information Fields | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Email* | The Customer's Email address. System messages are sent to this address. |
| Send To | This field becomes when alternate email addresses are entered on the Aliases tab. |
| | Select the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address, the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list. |
| Org. Unit | The Organizational Unit, be it a Company or Department with which the Customer is associated. |
| | (Organizational Units are created by the Supervisor, in Users >Organizational Units.) |
| Line Manager | If relevant, assign a system user with the Customer Role who can approve/reject requests made by this Customer, as part of the Change Management or Service Request approval process. (This information can not be edited if the line manager details are set by the LDAP synch.) |
| Room | This field is visible if the Display Rooms option is set to Yes in the Setup>Privileges>Customer screen and there are Room details configured in Organizational Units. |
| Address 1 | First line of Customer's address. |
| Address 2 | Second line of Customer's address. |
| City | Customer's city details |
| State | Customer's State details. Options will be displayed for the State, once the Country is selected, if Regions are configured for the Country in the system. |
| Zip/Postcode | Customer's area code. |
| Country | Customer's country. The country selected will determine the time zone and state options for the Customer. |
| Email Locale | Set the default language for email correspondence. |
| Phone | Enter Phone details. |
| Fax | Enter the Customer's fax number, if relevant. |
| Pager | Enter the Customer's pager details, if relevant. |

| Mobile | A mobile number can be entered as a contact number or for use with SMS (Short Mail Service message). An SMS can be sent to notify the assigned Technician when a request is created. |
|--------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | SMS Messaging options: |
| | From the drop-down list, select the SMS Service Provider. |
| | Override SMS Address. If your service provider does not appear in the list, click this checkbox and enter an alternate Service Provider. |
| SMS Override | Enter SMS Gateway override details for the Customer, if a number other than the one entered in the Mobile field is to be used to send/receive updates via SMS. Enter the complete SMS details in email address format, i.e., 000777891@smsgateway.provider.com. |
| Partner | |
| Customer of | Nominate the Partner Organization associate with the Customer. This is an external service provider who manages the Customer's request. |
| | (The option is enabled by the Administrator in Setup Privileges> Use >Edit Customer Partner. The Partner Organizations are defined by the Supervisor in the User>Partner Organizations tab.) |
| Locale | |
| Time zone | The Customer automatically adopts the default Timezone set for the system. However, the Timezone can be manually adjusted here for the specific Customer. |
| Last Login | Auto-populated with the date the Customer last logged into the system. |
| Host | The IP address of the last login for the Customer |
| GPS | The GPS coordinates of the last known address for the Customer. (This field is displayed when the Record GPS option is enabled in Admin>Setup>Setup>Privileges>Customer tab.) |
| Roles | |
| Current* | Multiple Roles can be assigned to a User. Select other Roles the Customer will use, by ticking the check boxes. |
| | Note: If the Technician Role is selected, a Supervisor must be allocated. |

| Customer Information Fields | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Default Portal | The Default Portal is the user interface a Customer, who is assigned multiple Roles, accesses by default when they log into the system. |
| | NOTE: If the Users Default Portal is set to Customer, the User details will not be accessible in the Users list, but included in the list within the User>Customer tab. |
| Details | |
| Notes | Click on the field to enter any Customer relevant information. |

* Denotes mandatory fields

1. Click Done.

Emailing Customers Credentials

🗳 Email

To email a newly created Customer details regarding their system log in details, click the Email button within the Customer Information screen. If Random Passwords is enabled, selecting Email will reset the Password and forward the details to the Customer. If Password Questions is enabled in Setup>Privileges>System, selecting Email will send a link to the Customer directing them to a page that includes the security questions set for their account and reset the password based on the answers provided. Customers must complete this process within an hour of the email being sent.

vCard Button

🖳 vCard

Select this option to download and open the Customer's information in an electronic business card format, to email or save outside the system.

Aliases Tab

The Aliases tab is used to enter additional email addresses. Email addresses in the Aliases tab allow the Customer to send emails to the System or Team support addresses from more than one address. The system creates requests from these emails. Notifications for requests created using an address in the Aliases tab, are sent to the main email address and cc'd to the alias address that was used to create the request.

When one or more alias email addresses have been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list.

| Cu | stomer Inform | nation | | | | | |
|----|---------------|---------|----------------|-------|----------|-----------|----------------|
| | Contact | Aliases | Items | | Requests | Contracts | |
| | Add | Remove | | | | | Jason Blackett |
| ⊠ | Email | | | | | | <u></u> |
| | ingo1@nsd.com | | | | | | |
| | | | 1 - 1 of 1 Re: | sults | | | |
| | | | | | | | Done |

To add an alias email address:

- 1. Select User>Customers
- 2. Click on the Customer name

The Customer Information screen appears.

- 3. In the Information tab, click Edit
- 4. In the Aliases tab, click Add
- 5. Enter an alias email address
- 6. Click Save
- 7. Select Done.

When an alias email address has been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the alias email address to be set as the default address applied to Customer correspondence.

To remove an alias email address, in Edit mode, tick the checkbox next to the relevant email address and then click Remove.

Items Tab

The Items tab defaults to list of Items assigned to the Customer. To view Shared Items, tick the Include Shared option. To view the Item details, select the Item Number hyperlink. Select the Excel button to output the Item List to Excel format.

| Customer Infor | mation | |
|---------------------------|---------------------|----------------------------|
| Contact | Aliases It | ems Requests Contracts |
| Add | Remove Exc | al Jason Blackett |
| | | Include Shared Display: 10 |

| Microfocus - eLearning | Website Services | Device-Incident Team |
| Email Service | Email Services | Device-Incident Team |
| | 1 - 5 0 | f 5 Results |
| | | Cancel Save |

To add an Item:

- 1. Select User>Customers
- Click on the Customer name The Customer Information screen appears.
- 3. In the Information tab, click Edit
- 4. In the Item tab, click Add

The Find Item editor is displayed.

5. Search for the relevant Item

For details regarding an advanced Item search see: Advanced Search.

6. Select the Item # hyperlink

The selected Item will be associated with the Customer.

- 7. Click Save
- 8. Select Done.

To remove an Item, in Edit mode, tick the checkbox next to the relevant Item and then click Remove.

Contracts Tab

The Contracts tab displays a Customer's current contract status. A Customer can be assigned an SLA or Contract when Billing>Contracts is enabled. A Customer can only have one active Contract.

| Customer Information | | | | |
|----------------------|---------|-------|-----------|-------------|
| Contact | Allases | Items | Contracts | |
| Edit | | | | Mary Calder |
| SLA Details | | | | |
| Service Level | Gold | | | |
| | | | | Done |

To create a new Contract for a Customer:

- 1. Select User>Customers
- 2. Select the Customer Name
- 3. Move to the Contracts tab
- 4. Click Edit

The system will display the Add button in the Customers tab

7. Define the Contract Time period

For the Per Customer Contract Type the Time Period for the Contract can be defined:

If *Subscription* is selected, the Start and End Dates are automatically completed by the system, but can be edited if required.

If *Time Limited Subscription* is selected, the Support Hours field is displayed and the number of support hours purchased by the Customer should be entered. Also, the Start Date and End Date fields should be completed manually, entering the length of time for the subscription period.

If *Support Hours* is selected, the number of support hours purchased by the Customers should be entered

If *Support Hours By Month* is selected, define the number of Support Hours covered per month and on which day of the month the Contract is designated as the Rollover Day. The Start Date and End Date fields are automatically completed as an annual contract subscription but can be edited, as required.

If the Start Date is set as a future date, the Pending Contract status is assigned. See Pending Contracts.

- 8. Click Save
- 9. Click Next to continue

The system reverts to the Contracts summary screen.

10. Click Save. Click Done.

To delete a current Contract select _____ next to the Contract Number. Alternatively, to delete a current or queued Contract, within the Contract>Customers tab check the field next to the relevant Contract # and select the Delete button.

The Items tab within the Customer>Contracts screen is used to list all the Items with a Contract that are owned by a Customer.

The list of requests with the time recorded against the Contract is displayed within the Audit tab. The Summary view displays the list of requests with total number of Notes and Time allocated to the Contract, while the Detail view includes a breakdown of all Notes and the associated time related to each request.v

Searching for Customers

To search for Customers within the Users>Customers tab:

- 1. Go to Users>Customer
- 2. Click

3. Enter any known Customer details

Or, for a complete Customer list enter a before or after date for Customer creation

4. Click Search

The results will be displayed in a table with the Customer Name and contact information.

5. Click on the Customer Name to open the Customer Information module or select the Email Address to send an email.

Re-enabling Deleted Accounts

Administrators have the ability to reactivate deleted Customer accounts.

To enable a deleted account:

1. Within the User > Customers tab select

- 2. Toggle the Account Status option to Deleted
- 3. Click Search

A list of deleted Customers is displayed.

4. Select a Customer to re-enable

The Customer information page appears.

5. Click the Enable button, to reactivate the account.

The Customer account becomes active and is available within the system.

2.2.3 Advanced Search Option

To search for a Customer or an Item based on custom field information, use the Advanced Search option. The Advanced Search enables the User to search on Customer or Item custom fields, if they have been enabled.

During request creation the option Advanced Search will be visible within the Find Customer and Find Item screens.

| Find Item | |
|--------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|
| Item Number | Item Type |
| | |
| ✓ Include Global* Items ✓ Active Items Only | All Items All Assigned Items By Customer By Org. Unit |
| Category | |
| Mobile Devices | • |
| Advanced Search | |
| Field | Value |
| | • |
| Resolution | |
| Input Type | |
| Memory Memory Card | |
| | |

To use the search option:

1. Tick the Advanced Search option

For the Find Customer, a custom field list will appear. For Find Item, an Item Category dropdown list is displayed.

- 2. For Find Item, select the Category. Two custom field lists appear
- 3. Select the custom field/s to search on

| Find Item | | | | |
|-----------------------|---|--------------------------|---|---|
| Item Number | | Item Type | | |
| | | | | |
| Include Global* Items | | All Items | | |
| Active Items Only | | All Assigned Items | | |
| | | By Customer By Org. Unit | | |
| | | O By Olg. Olin | | |
| Category | | | | |
| Mobile Devices | • | | | |
| Advanced Search | | | | |
| Field | | Value | | |
| Memory Card | - | | | |
| IMEI Number | | | | |
| TWET MULLING | • | | | |
| | | | 0 | Ø |

- 4. In the Value field, enter the details to be searched
- 5. Click to return a list of Customers/Items based on the custom field value entered
- 6. Click the relevant Customer Name or Item number to assign it to the request.

2.2.4 Pending Contracts

Contracts that have been forward dated on creation or that require invoice payment before they can become active in the system, are recorded as Pending Contracts. The list of Pending Contracts can be viewed in the All Agreements filter within the Service Level > Contracts screen.

A Pending Contract will automatically become active in the system on the start date assigned to the contract, if an invoice is not associated with the contract.

To enable a Contract before the start date:

1. Go to the Costs tab of the Item or Contracts tab of the Org Unit or Customer

The tab is available relative to where the contract is being activated. It will be Costs within the Item screen, or Contracts within the Customer or Org Unit Information screen.

2. Select Edit

The Enable button is displayed next to the Pending Contract Field

| Item Information | |
|--------------------|-------------------------------------------------------------|
| Information | Details Costs Requests Relationships Outages AMIE Snapshots |
| Duplicate | 법문 # 10000101 (lphone 6) |
| Contract | |
| Service Level | SLA |
| Contract # | 16 😮 |
| Contract Type | Subscription |
| Invoice # | 100039 |
| Start Date | 01/12/16 |
| End Date | 01/24/16 |
| Expires | 11 Days |
| Pending Contract # | 17 Enable |

3. Click Enable

The system prompts that the start date will be updated.

4. Click OK

The Contract is created with the new start date.

| Contract | |
|---------------|--------------|
| Service Level | Warranty |
| Contract # | 7 😢 |
| Contract Type | Subscription |
| Invoice # | 100016 |
| Start Date | 01/05/16 |
| End Date | 01/05/17 |
| Expires | 1 Year 0 Day |

- 5. Click Save.
- 6. NOTE: Requests raised against a Customer/Org Unit/Item with a Pending Contract, are assigned a Pending-No Contracts status. The Item/Customer/Org Unit's Contract needs to be activated before a Technician can work on the request.

2.2.5 Importing Customers using a CSV File

Using a .CSV file (comma-delimited text file), Customers can be imported instantly.

The fields that are required within the text file for Customers to be imported are:

- First Name
- Last Name
- Email address
- Username (unique)
- Password.

To import Customers using a .CSV File:

1. Select User>Customers

The Customers screen is displayed.

| Cu | stomers | | | | | | | |
|----|----------------|-----------------|------------------------|-----------------------------------------|---------|---------------------|----------------|---|
| | New 🛛 🖓 Se | arch Bulk | Export: Current Page 💌 | r | Filter: | All Customers [sys] | Display: 100 💌 | ۱ |
| | Customer Name | Email Address | Phone | Org. Unit | Country | ■ Roles | Web Access | |
| | Michael Angelo | michael@nsd.com | | Micro Focus - Head Office | | Customer | Enabled | * |
| | Jason Blackett | jason@nsd.com | | Micro Focus - Information Technology | | Customer | Enabled | |

2. Click

The Customer Import Wizard appears.

| Customer Import |
|---------------------------------------------------------------------------------------------------------------|
| Welcome to the Import Wizard |
| Select the CSV (Comma separated file) you wish to use for importing data. (Download Template) |
| The following fields are required: |
| First Name Last Name Email Username (Unique) Password |
| Browse No file selected. |
| Cancel Upload |

To view a template that illustrates the fields the application is looking for and the data types (see below), click the Download Template link on the Customer Import Wizard screen.

The following fields should be visible:

Title (char 128),First Name(char 64), Last Name(char 64), Email Address(char 64), Company(char 64), Department (char 64),Primary Company Contact (int 1), Primary Department Contact (int 1),Address 1(char 128), Address 2(char 128), City(char 64), State(char 32), Postcode/ Zip (char 20), Country(char 64), Phone(char 20), Mobile(char 20), Fax (char 20), Pager (char 32),Username (Unique char 64), Password (char 64), Partners Email (char 64), Custom1(char 256), Custom2(char 256), Custom3(char 256), Custom4(char 256), Custom5(char 256), Notes (clob), Locale (char 5), Line Manager Username (char 128)

The 'char ###' designation in parentheses after each field name signifies what type of data the import utility expects to see in each field. For instance:

• 'First Name (char 64)' means that the first name field cannot exceed 64 characters.

- 'Company Contact (int 1)' means that a 1 in the field will assume the Customer is the Primary Contact for the Company, if the field is left empty or completed with a zero, it is assumed the Customer is not a Primary Contact.
- · Fields marked as 'Unique' must be unique in the system
- Locale is the Email Locale for the Customer and will be set to the option applied in the Setup>Email>Setup>Default Locale field if the column is empty
- Line Manager Username is the Customer's Username as recorded in the system or to be created as part of the .CSV import.

If the Partner option has been enabled in the application Setup, a Partner can be assigned to a Customer by defining the Partner email within the .CSV file.

NOTE: The Country specified must be the same as what is found within the application

If the spelling is different in the .CSV file, a Customer's Country details will not be imported.

1. Click Choose File

Select a .CSV file to be imported

2. Click Upload

Displayed are lists of fields that are mapped to the corresponding fields in the .CSV file that is to be imported.

| Customer | Import | | | |
|--------------------------------|---------------------------------------------------------------|---------|--------------------------|------------------------------------------------------------|
| Field Mappin Select the fie | ig Wizard Ids you wish to map to the internal datal | base re | cords. | |
| Title | [0] Title (char 128) | • | Username | [18] Username (char 128) |
| First Name | [1] First Name (char 64) | • | Password | [19] Password (char 64) |
| Last Name | [2] Last Name (char 64) | • | Partner's Email | [20] Partner's Email Address (char 128) |
| Email | [3] Email Address (char 128) | • | Line Manager Username | [28] Line Manager Username (char 128) |
| Company | [4] Company (char 128) | • | Custom 1 | <not selected=""></not> |
| Department | [5] Department (char 128) | • | Notes | [26] Notes (CLOB) |
| Company Contact | [6] Primary Contact Company (int 1) | • | Locale | [27] Locale (char 5) |
| Department Contact | [7] Primary Contact Department (int 1) | • | Options | ☑ Ignore First Line |
| Address 1 | [8] Address 1 (char 128) | | Tielde thet de s | Web Access |
| Address 2 | [9] Address 2 (char 128) | • | create new rec | not contain matching system records automatically ords. |

*Fields marked with a / are mandatory.

*Fields marked with a *I* that do not contain matching system records automatically create new records in system.

1. Adjust mapped fields, if relevant

2. Check Ignore First Line if the imported .CSV file uses its first line as a header to define the field information

Leave the box unchecked if the .CSV file begins with usable data.

3. Check Web Access if the imported Customers are to have immediate access to the Customer Portal

If this option is not selected, Customers will not be able to log into the application until they have been designated web access within the Customer Information>Contact tab.

4. Click Import

The results of the import attempt will be displayed. If the import was successful, the new Customer details can now be accessed in the system.

5. Click Done.

After the Customer has been imported, other fields require manual configuration, including:

- Room (if relevant)
- User Roles.

2.2.6 Importing Customers using LDAP/Active Directory Server

Administrators can connect the application to a Directory Server for Customer and User authentication purposes. This removes the need to create Customer and User accounts as it allows the system to synchronize accounts and access levels with an existing Directory Server. It has the added benefit of allowing the Administrator to work with existing infrastructure.

As part of the mapping process, if no values exist on the authentication server for a mapped field, no drop-down menu will appear and Users cannot edit the field.

When the authentication server is used, the Customer's password is not visible within the service management tool, regardless of whether the Customer is new or existing in the system. This is due to the Customer's account being validated against an authentication server account rather than an internally authenticated account. The password is stored in the authentication server's database and it is not accessible through the service management system.

Also, Customers using LDAP or Active Directory authentication are not able to edit their first name, last name, LDAP/ADS username or email address. These fields are stored on the authentication server, and cannot be modified within the service management system.

To import Customers using a directory server, see Authentication.

2.3 Users

2.3.1 Users

The User menu allows an Administrator to create accounts for other Users. The tab gives Administrators and Supervisors control over all User accounts in the system. User accounts can be created, modified and deleted.

Users can have one of the following Roles:

- Technician
- Supervisor
- Partner;

and one or more of:

- Administrator
- Customer
- Finance
- Manager.

It is possible for any User to have multiple Roles. (For example, a Technician may also be assigned a Customer Role so they can log requests related to their own equipment. When a User has more than one Role, they can switch between interfaces easily.) See: Changing Roles

User Accounts can be created within the application or imported from one or more authentication servers.

If using User Custom fields, we recommend these be configured prior to creating Users. See: Custom Fields.

See: Creating a User Account (Internal Authentication)

See: Importing a User Account (External Authentication).

2.3.2 Creating a User Account (Internal Authentication)

Users within the system that are to be assigned to support Teams must be allocated one of the following Roles:

- Technician
- Supervisor
- Partner.

The above User Roles can work on requests. The About Roles section of the User Guide provides more information regarding specific User Roles in the system.

Creating a User Account

When creating a new User, the following four tabs are available:

- Information
- Schedule

- Aliases
- Team
- Skills
- Types.

Information Tab

Within the User Information tab, User details can be created, viewed and edited. User Roles, Process assignment and default logins can all be customized within this tab.

To create a new User:

- 1. Select User>Users
- 2. Click New

The User Information screen appears.

| User Information Fields | |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Title | Select a title from the drop-down menu options. (This field is displayed if the Enable Titles option is set to Yes in the Admin>Setup>Setup>Privileges>Customer tab.) |
| First Name* | Enter the User's First Name. |
| Last Name* | Enter the User's Last Name. |
| User Name* | Enter a LiveTime User Name (unique). |
| Password* | Enter a User Password. Note: Passwords can be changed under the Users Tab or reset by the Use under their My Account tab. |
| Roles* | Assign a Role for the User. Each Role has associated permissions. See Roles. |
| | Every Technician Role assigned also needs a Supervisor assigned. |
| | NOTE: Note: More than one Role can be assigne but only one of Supervisor, Partner or Technician can be allocated per User. |
| Default Portal* | The Default Portal is the User Interface accessed the default when a User with multiple Roles logs into the system. |
| | NOTE: If the Users Default Portal is set to Customer, the User details will not be accessible i the Users list, but included in the list within the User>Customer tab. |
| Assignment Template | This option is visible in a new User Information screen if Job Assignment Templates are configure in the User> Assignments tab. |
| | Select a template to assign the new User to multip Teams, Escalation layers and Processes. |

User Information Fields

| Operations Processes | Assign the licensed access for Request Fulfilment, Incident and Problem Management. | |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| | Assigning Processes to the User gives them access to support those Processes and enables them to be assigned as Team members for those Processes' Teams. | |
| | See User Processes. | |
| Change Processes | Assign the licensed access for Change, Release and Deployment Management. Note, Users assigned Release are automatically assigned Deployment. | |
| Internal Processes | Enable the Users privilege to maintain Service Level, Configuration and Knowledge Management. | |
| | Selecting the Configuration and Knowledge options displays the relevant fields that enable granular controls to be set for those processes. | |
| | NOTE: The Finance Role is limited to the processes of Configuration and Service Level Management. | |
| Knowledge | If the User is assigned the Knowledge Management process, their privilege to create, edit, delete and/or publish KBAs can be configured. | |
| Configuration | If the User is assigned the Configuration Management process, their privilege to create, edit and/or delete Items within the CMDB can be configured on a per task basis. | |
| Customer Org Unit | If the User is also allocated a Customer Role within the system, this field is displayed. Enter Company or Department details that apply to the User in their Customer Role. | |
| Line Manager | (This field is visible if the User is also assign a Customer Role within the system. The information can not be edited if the line manager details are set by the LDAP synch.) | |
| | If relevant, assign a system user with the Customer Role who can approve/reject requests made by this Customer. | |
| Primary Email* | Enter the User's email address. System messages are sent to this address. | |
| Send To | This field becomes available for Users that have the Customer Role and have alternate email addresses entered on the Aliases tab. | |
| | Select the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list. | |

| Phone | Enter telephone details. |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Mobile | A mobile number can be entered as a contact number or for use with SMS (Short Mail Service message). An SMS can be sent to notify the assigned Technician when a Service Request is raised. |
| | SMS Messaging options: |
| | From the drop down list, select the SMS service provider. |
| | Override SMS Address. If your service provider does not appear in the list, click this checkbox and enter an alternate Service Provider. |
| SMS Override | Enter SMS Gateway override details for the User, i a number other than the one entered in the Mobile field is to be used to send/receive updates via SMS Enter the complete SMS details in email address format, i.e., 000777891@smsgateway.provider.com. |
| Fax | Enter known fax details. |
| Pager | Enter pager details. |
| Salary | An annual salary can be entered. This value is used for reporting. |
| Forum Moderator | Select this checkbox to designate this User as a forum moderator. See Forums. |
| Survey Manager | Select this checkbox to enable this User to create and manage surveys in the system. |
| Supervisor* | Select a Supervisor, if the User has a technician role. Users with the Technician Role must be allocated a Supervisor. |
| Partner For | When a User is assigned the Partner Role, their associated Partner Organization must be assigned within this field. |
| Partner | If the User is also assigned a Customer Role, this field allows the Customer to be associated with a Partner Organization who will handle their requests when they are logged in the system. |
| Available | Shows if the User is available for requests to be assigned to them. This is based on work hours configured in the Schedule tab of the User and thei Vacation Status. If no hours are set within the Schedule tab when the "Define Works Hours" is enabled within Admin>Setup>Privileges>User screen and the User is not on vacation, the system will consider them to be unavailable. |

| **Visible when the Assignment Control is enabled in Admin>Setup>Privileges>User. |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Set to Off if the User is not to be assigned new requests, irrespective of their Availability status. |
| Placing a Technician on vacation excludes them from being assigned new requests automatically. When On Vacation is activated a Technician's existing requests are not reassigned. |
| This option is only visible for Technician Users, and when enabled allows the User to be included in Teams to view requests but does not allow them to put the request in edit mode or add Notes. |
| Adjust the default language for email correspondence, if required. |
| The User automatically adopts the default Country set for the system. However, the Country can be manually adjusted here for the specific User. |
| Set the State information based on the Country selected, if required. |
| The User automatically adopts the default Timezone set for the system. However, the Timezone can be manually adjusted for the specific User. |
| The GPS coordinates of the last known address. |
| |

* Denotes Mandatory Fields

- 1. Complete the User detail information
- 2. Click Done.

Emailing User Details

🕎 Email

To email a User regarding their system log in credentials, click the Email button within the User Information screen. If Random Passwords is enabled, selecting Email will reset the Password and forward the details to the User. If Password Questions is enabled in Setup>Privileges>System, selecting Email will send a link to the User directing them to a page that includes the security questions set for their account and reset the password based on the answers provided. Customers must complete this process within an hour of the email being sent.

vCard Button

🖳 vCard

Select this option to download and open the User's information in an electronic business card format, to email or save outside the system.

Schedule Tab

By default the Schedule tab includes the On Vacation option, which can be set to Yes when the User takes leave. The system will automatically reassign the User's active requests, if the Vacation Reassign option has been enabled in the Admin>Setup>Privileges>User tab. If this option has not been enabled, a Supervisor User will need to manually reassign the requests, if required.

| | | | | Cancel | Save |

If the system Setup has been configured to Define Work Hours and Schedule Vacations, this additional functionality is available within the Schedule tab.

Define Work Hours

Use the drop-down lists to set the hours of work when the User is available for the week. Based on what is set here, the system will assign requests to the User during their available hours. However, if no other Technician is available for requests based on their defined work hours, the system will assign the User new requests outside of their set work hours.

NOTE: If the Technician Define Work Hours option has been enabled, the hours of work MUST be defined, otherwise the system will ignore the Technician Assignment logic and automatically allocate new requests to the Team Lead.

Schedule Holidays

The Schedule Holidays functionality allows the Supervisor to pre-book leave in the system for Users. There are no restrictions on the number of days that can be set, and based on the configuration, when a leave period is activated, the system will automatically reassign active requests to other available Users applying the Technician Assignment logic. If the request was initially drawn from an Incident Queue, it will not return to the Queue but be reassigned to the most relevant Technician based on the Technician Assignment logic.

As a Supervisor User, to schedule User leave:

- 1. Go to the Users>User option
- 2. Select the hyperlink name of the User
- 3. Move to the Schedule tab
- 4. Click Edit
- 5. Select 🔂

The Vacation Details window is expanded.

6. Enter the reason for leave in the Purpose box

| Vacation Details | | |
|------------------|----------------|--|
| Purpose | Anual Leave | |
| Start Date | 12/24/15 22:30 | |
| End Date | 01/04/16 22:29 | |

- 7. Complete the Start and End date details
- 8. Click Save

The details are recorded in the database and when the Start Date is reached, new requests will not be assigned to the User. After the scheduled End Date, the User account will be automatically re-activated.

| Holidays | | | | |
|-------------|-------------|--------------------|-------------------|--------|
| On Vacation | No O Yes | | | |
| Schedule | • • | | | |
| | Durpose | Start Date | ▼ End Date | Active |
| | Anual Leave | 12/24/15 22:30 | 01/04/16 22:29 | |
| | | 1 - 1 of 1 Results | | |

9. NOTE: It should be noted that if the User on vacation is a Team Lead for any Teams where there are no Technicians available for new request assignment, the system will allocate new requests to the Team Lead, regardless of their vacation status.

The Supervisor Events calendar in the Home Tab shows when Users on vacation:

| ◄ ► today | | | | January 2016 | | | month week day | Legend |
|-------------|----|-----|-----|--------------|-----|-----|----------------|--------------------|
| Sun | | lon | Tue | Wed | Thu | Fri | Sat | |

| | | | | | | | | |

Aliases Tab

NOTE: This is only applicable if the User has the Customer Role.

Use the Aliases tab to enter additional email addresses. Email addresses in the Aliases tab allow the User to send emails to the System or Team support addresses from more than one address. The system creates requests from these emails. Notifications for requests created using an address in the Aliases tab, are sent to the main email address and cc'd to the alias address that was used to create the request.

When one or more alias email addresses have been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the most appropriate email address to be set as the default address applied to Customer correspondence. When the Send To field is set to an alias address the Primary Email address is not included in the cc list, unless specified in the request Information tab cc list.

| User Information | | | | |
|-------------------------|--------------------|------|--------|-------------|
| Information Schedule | Aliases | Team | Skills | Org Unit |
| Add Remove | | | | Ingo Engels |
| 🖾 Email | | | | <u>à</u> |
| ingo@epm.blr.novell.com | | | | |
| | 1 - 1 of 1 Results | | | |
| | | | | Done |

To add an alias email address:

- 1. Select User>Users
- 2. Click on the User name

The User Information screen appears.

- 3. In the Information tab, click Edit
- 4. Select the Aliases tab
- 5. Enter an alias email address
- 6. Click Save.

When an alias email address has been created for a Customer, a Send To field is displayed on the Customer Information screen, which allows the alias email address to be set as the default address applied to Customer correspondence.

7. NOTE: An alias will only be used if the User has a Customer Role.

Team Tab

The User Team tab lists Teams associated with the selected User. Use this section to assign the User to one or more support Teams, making the additions by Team or job Assignment templates that have been configured in the system. Processes selected in the Information Tab for the User determine the Teams available in the Team tab.

Once a User is assigned to the Team, the Supervisor must configure the escalation layers for the Team to include the new User. However, the User can easily be added to Layer One of escalation when associated with a new Team by ticking the "Assign new users to layer one option" when assigning the Team within this tab. Also, if Assignment templates are created in the system, by selecting the Team template, the User will automatically be added to Teams, Escalation Layers and Work Groups configured within the selected template.

NOTE: The User must be assigned the relevant Processes for Support Teams to be shown in Team search results. If an Assignment template is selected and includes Teams for Processes the current User is not allocated, those Teams will not be included on the template.

To add a User to a Team within the Team tab:

1. Click Edit

| Jser Information | | | | |
|------------------|-----------------------------------------------------------------------|---------|----------------------------|-------------|
| Information | Schedule | Aliases | Team Skills | Org Unit |
| | | | | Ingo Engels |

| | | | Cancel | Save |

2. Using Add By Team, enter a Team Name in the Find Team field and click Q

Or, leave the field empty and click **Q**. The Teams for Processes that the User is assigned are displayed in the search results.

- 3. Tick "Assign new user to layer one", if relevant
- 4. Select a Support Team link

The User is assigned to the Team and layer one of escalation if appropriate.

5. Click Save.

To add a User to a Team within the Team tab using Assignment templates:

- 1. Click Edit
- 2. Within the Add By field, select Team Template

Job Assignment Templates that have been configured in the User>Assignments tab are displayed, but only including Teams consistent with the Processes assigned to the User.

To remove a User from a Team:

1. Select User>Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. Select the Team Tab
- 4. Click Edit
- 5. Select to remove a Team assignment
- 6. Click Save
- 7. Click Done.
- 8. NOTE: If a User is the Team Lead or the only person assigned to an escalation layer they cannot be removed from a Team under this tab.

Skills Tab

Use this section to assign any specific Classifications that are to be handled by a Supervisor, Technician or Partner. This assignment assumes areas of expertise for Users assigned to these Classifications. This allows the system to automatically route requests logged against these Classifications to the most appropriate User. **NOTE:** Prior to using the Skills tab, the Supervisor should configure Items and Classifications.

Assigning a Classification

To assign a Classification:

- 1. Select User>Users>Skills
- 2. Click Edit to display the Add button
- 3. Click Add
- 4. Select the Item Category

The Item Type and Classification Type drop-down list is displayed.

| User Information | | | |
|----------------------|--------------------|-----------|-------------|
| Information Schedule | Aliases Team | Skills | Org Unit |
| | | | Ingo Engels |
| Item Category | • | | |
| Cancel Save | | | |
| Classification | 🛓 Item Category | Item Type | ≡ |
| | 0 - 0 of 0 Results | | |

- 5. Choose an Item Type, if relevant
- 6. Select * to assign all Classifications as Skills or choose a specific Classification

The list displayed will include all Classifications configured for the Item Category and the Item Type, if an Item Type is selected.

| User Infor | mation | | | |
|----------------|-------------------------------|--------------------|-----------|-------------|
| Inform | ation Schedule | Aliases Team | Skills | Org Unit |
| | | | | Ingo Engels |
| Item Category | Hardware 💌 | | | |
| Item Type | Dell Latitude E6430 | | | |
| Classification | * |] | | |
| | * | | | |
| Classific | Configuration Downloads | 🛓 Item Category | Item Type | ≣ |
| | General Manuals Network | 0 - 0 of 0 Results | | |

- 7. Click Save
- 8. Click Done.

NOTE: The Classification assigned to the User is either based on the Classifications of an Item Category or Item Type, hence displaying two columns. However, the Item Type column will only include information when the Classification selected is specific to that Item Type, and not directly related to the Item Category.

To remove a Classification:

1. Select User>Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. In the Skills tab, click Edit

The Delete button appears at the bottom right.

- 4. Click the checkbox next to the Classification. Multiple Classifications can be checked
- 5. Click Remove
- 6. Click Done.

Org Unit Tab

Use this section to assign one or more Org Units to a Supervisor, Technician or Partner, which will result in requests that are logged by these Org Units being routed to the assigned Users. When Users are assigned to support Organizational Units, the Find Customer option during the request creation process displays the "Supported Org. Units Only" option. This limits the Customer search results to those Customers who belong to the Org. Units the logged in Technician is assigned to support.

| Find Customer | | |
|------------------------------|-----------|---|
| First Name | Email | |
| | | |
| Last Name | Phone | |
| | | |
| Username | Org. Unit | |
| | | |
| | | |
| Supported Org. Units Only | | 0 |

Assigning an Org Unit

To assign an Org Unit:

- 1. Select User>Users>Org Units
- 2. Click Edit to display the Find Org. Unit search field
- 3. Enter any known Org. Unit details or leave the field blank to return the full list of Org. Units recorded in the system

| User Information | | | | | | |
|------------------|----------|---------|-------------|-------------|-----|-------------|
| Information | Schedule | Aliases | Team | Ski | lls | Org Unit |
| | | | | | | Ingo Engels |
| Org. Units | | | Find Org. (| Jnit (Name) | | 0 |
| | | | | Cancel | | Save |

- 4. Click
- 5. Click on the Org. Unit name hyperlink to associate it with the User Multiple selections may be made, if required.
- 6. Click Save.

Removing an Org Unit

To remove the association between a User and an Org Unit:

1. Select User>Users

The User Information screen appears.

- 2. Click on the name of the User
- 3. In the Org Units tab, click Edit
- Select next to the relevant Org Unit/s
 The Org Unit/s details are removed from the tab
- 5. Click Save
- 6. Click Done.

Re-enabling Deleted Accounts

Administrators have the ability to reactivate deleted User accounts.

To enable a deleted account:

- 1. Within the User>Users tab, select the Search button
- 2. Select Deleted as the Account Status search option
- 3. Click Search

A list of deleted Users is displayed.

4. Select a User to re-enable

The User information page appears.

5. Click the Enable button, to reactivate the account.

The User account becomes active and is available within the application.

2.3.3 Importing Users using LDAP/Active Directory Server (External Authentication)

Administrators can connect the system to a Directory Server for User authentication purposes. This removes the need to create User accounts as it allows the application to synchronize User accounts and access levels with an existing Directory Server. It has the added benefit of allowing the Administrator to work with existing infrastructure.

As part of the mapping process, if no values exist on the authentication server for a mapped field, no drop-down menu will appear and Users cannot edit the field.

When the authentication server is used, the User's password is not visible through the service management application, regardless of whether the User is new or existing in the system. This is due to the User's account being validated against an authentication server account rather than a system account. The password is stored in the authentication server's database and it is not accessible through the application.

Also, Users using LDAP or Active Directory authentication are not able to edit their first name, last name, LDAP/ADS username or email address. These fields are stored on the authentication server and cannot be modified within the service management tool.

To import Users using a directory server, see Authentication.

2.4 Assignments

The Assignments tab allows job function templates to be created for new and existing Technician Users. Users can be assigned to multiple Teams, Escalation Layers and, for new Users, Processes by applying the templates. Administrator and Supervisor Users can apply these templates within the User Information screen for new Users, and the Team tab of the User Information screen for existing Users who are assigned the relevant Processes.

For example, a Frontline Support template may be created, where a User is assigned to Layer 1 of an Incident Team and a Work Group of a Service Request Team. They may also be assigned to an Update Customer Group within a Change Management Team. This template could then be easily applied to all Users created directly in the system, within the User Information screen. Or, if the User was created using an authentication server, the template could be applied within the Team tab of the User Information screen.

2.4.1 Creating an Assignment Template

Before creating an Assignment template, be sure all the relevant Teams and Escalation Layers or Groups exist in the system. However, should you create additional Teams, Escalation Layers or Groups at a later date, the Assignment template can easily be updated.

To create an Assignment Template:

- 1. Select User>Assignments
- 2. Click New

| Assignment Template | |
|---------------------|---------------------|
| Information | |
| | |
| Details | |
| Template Name | New Template |
| Layers | Add Remove |
| | ☑ Team Name ≜ Layer |
| | 0 - 0 of 0 Results |
| | Cancel Save |

- 3. Enter the Template Name
- 4. Click Add

The Find Team editor is displayed.

5. Enter a Name to find a specific Team, or leave the field blank to return a list of all Teams and click

| Template Name | New Template | |
|---------------|------------------------|---|
| Team | | |
| | Find Team (Name) | |
| | | 0 |
| | | |
| | Team | à |
| | BYOD-Incident-Team | |
| | Change Management Team | |
| | Device-Incident Team | |
| | Portfolio | |
| | Problem Analysis Team | |
| | Service Request Team | |
| | TeamSMG | |
| | TeamSMG1 | |
| | 1 - 8 of 8 Results | |

6. Select the Team name link

The Layer or Groups drop down list is displayed.

7. Select an option from the available list

| Details | |
|---------------|------------------------|
| Template Name | New Template |
| Team | |
| | Find Team (Name) |
| | |
| | Change Management Team |
| Layer | [No Layer] |
| | [No Layer] |
| | Escalation |
| | Layer 2 |
| | Group Default Group |
| | |
| | Default Manager Group |

- 8. Click Save
- 9. Repeat steps 4 to 8, until all relevant assignments have been created for the template

| Assignment Template | | |
|---------------------|--------------|--------------|
| Information | | |
| | | |
| Details | | |
| Template Name | New Template | |
| Layers | Add Remove | |
| | 🖾 Team Name | ≜ Layer 🛛 🔳 |
| | Portfolio | Management |
| | 1-1 | of 1 Results |
| | | Cancel Save |

10. Click Save.

The template is now available within the User Information screen for new User creation, or the Teams tab for existing Users.

2.4.2 Editing an Assignment Template

To make changes to an existing User Assignment template, such as adding or removing Teams and the related Layer or Group assignment:

1. Select User>Assignments

| Assignments | | | |
|---------------|----------------|--------------------|---------------|
| New | | | Display: 10 💌 |
| Template Name | <u>à</u> Owner | ≣ Teams | Layers |
| New Template | Kamal K | 1 | 1 |
| | | 1 - 1 of 1 Results | |

- 2. Click on the relevant Template Name hyperlink
- 3. Click Edit
- 4. To remove a Team/Layer association, check the box next to the Team Name

| Template Name | New Template | | |
|---------------|-----------------|--------------------|--|
| Layers | Add | Remove | |
| | 🖾 Team Name | ≜ Layer | |
| | BYOD-Incident-T | Team Layer 1 | |
| | Portfolio | Management | |
| | | 1 - 2 of 2 Results | |

- 5. Click Remove
- 6. To add a Team/Layer association, click Add
- 7. Enter a Name to find a specific Team, or leave the field blank to return a list of all Teams and click

| Template Name | New Template | |
|---------------|------------------------|---|
| Team | | |
| | Find Team (Name) | |
| | | 0 |
| | | |
| | Team | à |
| | BYOD-Incident-Team | |
| | Change Management Team | |
| | Device-Incident Team | |
| | Portfolio | |
| | Problem Analysis Team | |
| | Service Request Team | |
| | TeamSMG | |
| | TeamSMG1 | |
| | 1 - 8 of 8 Results | |

8. Select the Team name link

The Layer or Groups drop down list is displayed.

9. Select an option from the available list

| Details | |
|---------------|------------------------|
| Template Name | New Template |
| Team | |
| | Find Team (Name) |
| | |
| | Change Management Team |
| Layer | [No Layer] |
| | [No Layer] |
| | Escalation |
| | Layer 2 |
| | Group |
| | Default Group |
| | Default Manager Group |
| | Group12 |

- 10. Click Save
- To save all changes, click Save.
 The screen defaults to the Assignments list view.

2.4.3 Deleting an Assignment Template

To delete an Assignment template from the system:

- 1. Select User>Assignments
- 2. Click on the relevant Template Name hyperlink
- 3. Click Edit
- 4. Select Delete

A warning message is displayed.

| Details | | | |
|---------------|--------------------|------------------|---|
| Template Name | New Template | | |
| Layers | Add Remo | ve | |
| | 🖾 Team Name | 🛓 Layer | ≣ |
| | BYOD-Incident-Team | Layer 1 | |
| | Portfolio | Management | |
| | TeamSMG | Default layer | |
| | 1 | - 3 of 3 Results | |
| | Delete | Cancel Save | |

5. Click OK.

The screen defaults to the Assignments list view.

2.4.4 Applying Assignment Templates to New Users

For new Users created directly in the system, the Assignment template is available within the User Information screen. By selecting a template, the newly created User is automatically associated with all relevant Processes, Teams, Escalation Layers and Groups. To remove a Team assignment after a template has been applied during the new User creation, deselect the Process and the Team Name will be removed from the assigned list.

To use an Assignment template for a new User:

- 1. Select the User>Users tab
- 2. Click New
- 3. Enter the User details
- 4. Within the Assignment Template field, select the relevant option

All Processes are automatically ticked for the User.

| Roles | Supervisor Administrator Customer | Technician Manager | Partner Finance |
|----------------------------------------|-----------------------------------|-----------------------|--------------------------|
| Default Portal Assignment Template | User Portal | • | |
| Operations Processes | Developer Service Desk Tee | | |
| Change Processes Internal Processes | Change | Release | Deployment Mnowledge |

5. Uncheck any Processes that are to be removed for the User

The Team association will automatically be removed from the Team Name list.

- 6. Complete remaining User details, including assigning a Supervisor and Email address
- 7. Click Save.

2.4.5 Applying Assignment Templates to Existing Users

For Users who have active accounts in the system and are assigned the relevant Processes, the Assignment template is available within the Team tab of the User Information screen.

To apply a template to an existing User:

- 1. Go to User>Users
- 2. Select the Technician Name hyperlink
- 3. Click Edit
- 4. Verify the User has all the relevant Processes with the User Information screen
- 5. Select the Team tab

 Within the Add By field, select the Team Template option The drop down list of Templates is made available.

| User Information | | | | | |
|------------------|---------------|---------|------|--------|-------------|
| Information | Schedule | Aliases | Team | Skills | Org Unit |
| | | | | | Ingo Engels |
| Add By | Team Template | - | | | |
| Templates | | ▼ | | | |
| | New Template | | | Cancel | Save |
| | R&D Template | | | | |

- 7. Select the relevant Template from the list
- 8. Click Save.

| User Information | | | | | |

| | Team Name | | à | Layer | ≡ |
| | Portfolio | | | Management | |
| | | (| 1 - 1 of 1 Results | | |
| | | | | Cancel | Save |

2.5 About Roles

2.5.1 User Roles

There are seven access levels in the system that determine the functionality and privileges. These include the Administrator and Customer Roles, plus five User Roles:

- Supervisor
- Technician
- Partner
- Manager
- Finance.

A Default Role is assigned if multiple Roles are allocated to an individual.

A User can have more than one Role but only one of the licensed Roles of:

- Supervisor
- Partner
- Technician.

Default Portal

Individuals can be allocated more than one Role. For Users assigned more than one Role, define a Default Portal within their Information screen. When they log into the system, the Default Portal is displayed and they can move to other Portals using the links provided next to their login name.

The Default Portal options include Customer, Setup for system Administrators and User, for those assigned a Supervisor/Technician/Partner, Finance and Manager Role(s).

When a person has multiple Roles, the Default Role is used to log into the system and the privileges of multiple User Roles are consolidated in one view. For example, if a User is assigned Finance, Manager and Supervisor/Technician access, they can view all functionality related to these Roles within the User view.

When the User is also assigned Admin and Customer access, next to their login name, the options of Setup and Customer will be displayed.

```
[setup] [Customer] System Supervisor
```

The Administrator can access the admin functionality within the Setup view. If the Administrator is also assigned User and Customer access, next to their login name, the options of Setup and Customer will be displayed.

[user] [Customer] System Supervisor

Users or Administrators who are also assigned Customer access can view the Customer Portal through the Customer link displayed in the sub-menu bar. Whilst logged in as the Customer, the options of User and Admin Portal will be displayed within the Customer Portal sidebar Menu.

To move to another User Role portal:

- 1. Log in using the credentials for the default User Role
- 2. Click on the Setup/User/Customer link, as required. The screen defaults to the selected functionality.

2.5.2 User Processes

The service management application includes processes to manage the different types of requests:

- Service Requests
- Incidents
- Problems
- Change Requests
- Release and Deployment
- Service Level Management.

NOTE: Service Requests, Problem, Change, Release and Deployment Management apply based on installed license.

When User accounts are created, access to Incident, Problem, Change, Release, Deployment, Request, Service Level, Configuration and Knowledge Management processes are allocated to the Roles. Allocating processes gives the User access to requests and information within each assigned process.

Providing access to the licensed processes of Incident, Problem, Change and Service Requests means the User can be assigned as a member of support Teams within that process.

Setting access to the support process of Service Level Management displays the Service Tab for the User when they log into the application. This allows the User to create and edit SLAs, OLAs and Underpinning Contracts.

When the privileges of Configuration and Knowledge are selected, the options to define control at a more granular level are displayed in the User Information screen, and Users can be assigned permission to create, edit, delete and publish elements within these processes.

The following User Roles have limitations for the processes they are assigned:

- The Finance Role can only be assigned Configuration and Service Level Management
- The Management Role can be allocated all processes but with 'Read Only' access.

2.5.3 User Roles & Privileges

| Service Manager 7.0 User Roles and Privileges | | | | | | | |
|-----------------------------------------------------|---------------|------------|------------|---------|---------|---------|----------|
| Modules & Features | Administrator | Supervisor | Technician | Partner | Finance | Manager | Customer |

2.5.4 Administrator Role

The Administrator Role performs System Configuration and Setup tasks including:

- Customizing the application and automated messages
- Configuring the interaction between external systems, including the authentication servers and
 asset management tools
- Enabling Customer, User, Request and System Privileges
- For systems with Problem Management, set parameters for automatic Problem identification and creation.

NOTE: Multiple Administrator Roles can be created within the system

It is recommended that organizations create only one or, at maximum, two Administrators. Only an existing Administrator can create other Administrator accounts.

If a User is assigned multiple Roles, the privileges are consolidated within a single User view. See: Changing Roles.

2.5.5 Supervisor Role

The Supervisor Role provides maximum access to the system for day-to-day management of the service desk and configuration control.

Supervisor Users can:

- Create User and Customer accounts
- Assign Roles & Processes
- · Build workflows
- Configure the CMDB
- Allocate Technicians to Teams and Escalation Layers
- Define Service and Operational Level Agreements (SLAs and OLAs) for the organization.

The Configuration Management Database (CMDB) is the central data repository for the support tool. The CMDB allows centralized management of IT infrastructure through Configuration Items (Items). Within the application, everything is tied to Items in the CMDB. Supervisors control the configuration of the CMDB, which includes:

- Item Categories
- Lifecycle Templates
- Item Types
- Classifications
- Configuration Items.

NOTE: The ability to create Items can also be assigned to other Roles, if the Administrator has enabled the option

If a User is assigned multiple Roles, the privileges are consolidated within a single User view. See: Changing Roles.

2.5.6 Technician Role

The Technician Role is assigned to service desk staff who work on requests.

Technicians are allocated support Processes and can then be assigned to Teams and Escalation Layers. Technicians can belong to any number of Teams within Processes.

When enabled by the Administrator, Technicians can:

- Create new Customers
- Create new Items
- Reassign requests
- Edit other Technicians' requests
- Create Alerts
- Create, edit, publish and delete Knowledge Base Articles by default.

NOTE: Every Technician must be assigned to a Supervisor

If a User is assigned multiple Roles, the privileges are consolidated within a single User view. See: Changing Roles.

2.5.7 Partner Role

A Partner User is assigned to a Partner Organization and has the same privileges as a Technician User, but can only view and support Customers associated with their assigned Partner Organization.

A Partner Role gives a User the ability to:

- Manage their Customers
- Manage their Customers' requests
- Create and maintain their Customers' Items
- View reports.

Users who are assigned the Partner Role must be associated with a Partner Organization, and this is done manually within the User Information screen or within the Partner Organization > Technician tab. Partner Organizations are used in the management of requests between Customers/ Organizational Units and external service providers within the support system. It allows multiple Partner Users to be available within a Team, and assigned at relevant levels of escalations for working on requests.

If a Partner User is created and not associated with a Partner Organization, they cannot be assigned to a Team and therefore cannot be assigned to work on requests.

When a request is created for a Partner Organization's Customer it is automatically allocated to the Partner User within the Partner Organization.

2.5.8 Manager Role

The Manager Role is a User who can oversee the activities of the service desk or specific Processes. Managers have access to most parts of the system, primarily on a *read-only* basis.

The Manager access can be provided to Users who do not actively participate in the day-to-day happenings of service and support Teams, but may require detailed information about the actions and status of requests.

As a Manager, the User can:

- Create Customers
- View requests within their allocated Processes
- Access the full range of reports
- Create and modify Items
- Approve Service and Change Requests. (Based on licenses for Service Manager product.)

Users who manage the service desk and are to be included in Teams with edit access to requests, should be allocated a Supervisor Role.

NOTE: If a User is assigned multiple User Roles, the privileges are consolidated within a single User view. See: Changing Roles.

2.5.9 Finance Role

Users with the Finance Role are assigned Service Level Management and Configuration Management by default. Their Role is primarily for driving the service costing models and, if relevant, maintaining the Billing module that uses system Contracts and Purchase Orders.

A Finance User can:

- Create Customers and Items
- Project end to end Service costs
- · Complete access to SLA's and OLA's
- Access reports
- Bill for services
- Process payment for Invoices
- Cancel Maintenance Contracts
- Manage IT and Service Assets.

NOTE: A User assigned the Finance Role is the only User with the privilege to process the payment of Invoices

This is relevant for systems that have the Invoice option enabled in the Billing Setup.

If a User is assigned the Supervisor and Finance Role, the privileges are consolidated within a single User view. See: Changing Roles.

2.5.10 Customer Role

The Customer Role is for users who submit Service Requests, Incidents and possibly Change Requests to the service desk.

Within the system, based on the system configuration, Customers can:

- · Create and manage requests via email
- · Create, view or edit their requests through the Customer Portal
- Self-diagnose issues using the Knowledge Base
- Access proposed Solutions during the request creation process
- · Participate in a live chat with Technicians to discuss their issues
- · Subscribe to RSS feeds for the latest information on their requests
- Access the Knowledge Base, Forums and FAQs
- · Customers have access to their Items' Outages information
- View all Services offered by the Service Organization, if enabled for the system
- Approve Service and Change Requests. (Based on licenses for Service Manager product.)

Reports

3.1 Reports

| | <u> ၇</u> User | | 🗟 Reports | ို My Acc | ount | 🐼 Setup | CMS |
|-------|----------------|-----|-----------|-----------|------|---------|-----|
| Login | System | Log | | | | | |

The Reports tab is used to view:

- Login Reports
- System Reports
- + Log.

These reports provide the Administrator with details of system activity in real time. The Reports outline who has logged into the system and how the application is performing. The Login report can be used to log out Users who have closed a session without logging out.

Within the Log tab, the Administrator can view the system log files and export them when they require assistance with the system.

3.2 Login Report

The information displayed on the Login Report screen includes:

- Recent Logins with IP addresses, host details and login dates for Users who recently accessed the system
- Alert Manager Statistics showing active Alerts in the system

Alerts can be created manually by Users and automatically by the system to notify Users about service and support activities.

• Current sessions, with an End Session option at the bottom of the screen.

NOTE: Administrator Users can click on Logout to end a User's session. This may be required if a User has disconnected from the system without logging out and needs access to log back in. This option is not required if the Terminate Active Session option is set to Yes in the Setup>Privileges>System tab.

3.3 System Reports

System reports are a real time summary of the system status and environment.

Report information includes:

- Statistics including a summary of key system metrics regarding the current session, the hosting environment and memory usage
- Overall application and database statistics

- Tasks lists all background system jobs including Indexing, which allows the Supervisor to view that the system is indexing correctly without sticking
- Information about the Java Virtual Machine running on the server.

3.4 Log File View

To assist with the diagnosis of issues experienced when using the system, the Administrator can access system log files within the Log File Viewer screen. The information contains the last 250K of the 1MB log file.

| Log File Viewer | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| 企 Export | |
| <pre>sponse (WODynamicGroup.java:136) at com.webobjects.appserver.WOComponent.appendToResponse (WOComponent.java:1122) at er.extensions.components.ERXComponent.appendToResponse (ERXComponent.java:195) at com.vebobjects.appserver.WOSession.appendToResponse (WOSession.java:1385) at er.extensions.appserver.WOSession.appendToResponse (WOSession.java:1385) at com.vebobjects.appserver.WOSession.appendToResponse (WORsponse) at com.vebobjects.appserver.ERXSession.appendToResponse (WORsponse) at er.extensions.appserver.ERXApplication.appendToResponse (ERXComponent.java:1794) at er.extensions.appserver.ERXComponentRequestHandlerdispatchWithPreparedPage (ERXComponentRequestHandler.java:235) at er.extensions.appserver.ERXComponentRequestHandlerdispatchWithPreparedAssion(ERXComponentRequestHandler.java:235) at er.extensions.appserver.ERXComponentRequestHandlerdispatchWithPreparedAssion(ERXComponentRequestHandler.java:266)</pre> | |

3.4.1 Log File Request

Administrators experiencing issues with the application, can easily export their Log File information

using <u>Export</u>. The output of a log file export, which includes system and license information, can then be uploaded to a pre-existing incident or emailed to your local system support team.

4.1 My Account

The My Account tab allows the User to:

- Edit personal information and notification preferences
- Reset their Username and password
- · Set Password questions, if enabled in the system
- Select the Default Portal and Home tab landing page
- Set a Time Zone and Date Format.

NOTE: Fields imported through an LDAP or Active Directory server cannot be changed.

4.1.1 Editing Account Information

To edit account information:

1. Select Home>My Account

The Account Information screen appears.

| Account Informat | ition | |
|-----------------------|---------------------------|------|
| Account Inform | nation Vacation Sank | ar R |
| Edit | | |
| First Name | 9 Sankar | |
| Last Name | R | |
| Username | sankar@epm.blr.novell.com | |
| Email | il sankar@nsd.com | |
| Default Portal | I User Portal | |
| Default Home | ; Tasks | |
| Receive Notifications | \$ On | |
| Notify On | New Update Escalation | |
| Phone | • | |
| Mobile | • | |
| Fax | c | |
| Pager | r | |
| Custom 1 | | |
| Date Format | t mm/dd/yy | |
| Country | r | |
| Time Zone | e (GMT +5:30) New Delhi | |

- 2. Click Edit
- 3. Make the required changes

4.

Account Information

| Account information | |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| First Name | First name of the Account User. If account information is imported via LDAP or Active Directory, First Name will not be editable. |
| Last Name | Last name of the Account User. If account information is imported via LDAP or Active Directory, Last Name will not be editable. |
| Username | Username name of the Account User. |
| Password | Password reset. |
| Confirm Password | Re-enter the password to confirm correct entry of the selected password. |
| Password Question One/Two | Select questions that are to be asked when the Lost Password link is selected in the Login Page and the challenge questions are required to verify Users details before re-sending the system password. |
| | (These fields are displayed when Password Questions option has been enabled in Setup>Privileges>System.) |
| Answer One/Two | Enter the answers to the questions. |
| Default Portal | Where a User has more than one Role, the Default Role will be the Role used at login. |
| Default Home | The User can define the tasks Home tab or the Dashboard tab as the default landing page when they log into the system. |
| Preferred Communication | Select Email or SMS as the preferred method of receiving updates from the system. |
| | This field is visible if the User also has a Customer Role in the system and the Customer Defined Contact option is enabled in Setup>Privileges>CustomerTab. It only applies, when the Team has the Customer Notification option set to Customer Defined. |
| Email | Email address for the Account User. |
| Receive Notification | When set to No the User will not receive system- generated emails when requests are created or updated. Irrespective of the setting in this field when a request is escalated to a User, an email notification will be sent. |
| Phone, Mobile, Pager | Telephone, mobile and pager details. If these fields are imported via LDAP or Active Directory they will not be editable. |
| Date Format | Preferred date format. |
| | |

| Account Information | |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Country | When Country details are entered, if the Country has States, a States list will be displayed. (If the option is not available is the displayed list, additional options can be configured by the Administrator in Setup>Localization> Regions.) |
| Time Zone | User's Time zone |
| Available for Chat | Using this option Users can select whether they are available for a Chat request, when the Chat facility is enabled. |

5. Click Save.

4.1.2 Receiving Email

If a User does not wish to receive email notifications when they are assigned a new request, or when changes are made to a request (i.e., a new request Note has been logged by the Customer) set the Receive Email option to No.

It should be noted that regardless of what is selected for the Receive Email option, if a request is escalated to the User, a notification email is forwarded to them by the system.

4.2 Changing Roles

If a User is assigned more than one Role in the application, they can switch to another Role after logging into the system that provides the User access to their assigned Default Portal.

The User Roles of Supervisor or Technician, Finance and Manager are consolidated within one User view. Therefore, if a User is assigned Finance, Manager and Supervisor/Technician access, they can view all functionality related to these Roles within the User view. If the User is also assigned Admin and Customer access, next to their login name, the options of Setup and Customer will be displayed.

| setup] [Customer] | System Supervisor |
|-------------------|-------------------|
|-------------------|-------------------|

The Administrator can access the administrator functionality within the Setup view. If the Administrator is also assigned User and Customer access, next to their login name, the options of User and Customer will be displayed.

Users or Administrators who are also assigned Customer access can view the Customer Portal through the Customer link displayed in the sub-menu bar. Whilst logged in as the Customer, the options of User and Admin Portal will be displayed within the Customer Portal sidebar Menu.

To move to another User Role portal:

- 1. Log in using the credentials for the default User Role
- 2. Click on the Setup/User/Customer link, as required. The screen defaults to the selected functionality.

4.3 Alerts

Alerts are an internal mechanism used by Administrators to notify Users about important issues relevant to them or their environment. System generated Alerts are created for Administrator Users when:

- An ADS/LDAP sync has been performed
- · An AMIE Item import has been completed
- SLA warnings and breaches.

Alerts generated within the My Account tab can act as reminders or notifications for personal use, for a specific User, or for Users of a particular Role. Alerts can be scheduled to be published and dismissed.

Viewing Alerts

When an Alert is received, the Alert icon flashes in the top right corner, next to the login name:

| Wed, 6 Jan 2016 15:56:00 |) ? Help | 🕂 Logout |
|--------------------------|-------------------|----------|
| | | |
| | | |
| | | |
| | $\{1, \dots, n\}$ | Sankar R |

To view a received Alert:

1. Click on the icon

The Alert screen opens with all current Alerts. The icon in the first column indicates whether the Alert is Information, a Warning or Urgent.

| Alert | 5 | | | |
|-------|----------------|-------------------|------------------|---|
| Aler | ts | | | |
| D | ismiss R | 5S Feed | | |
| ⊠ | Publish | ₹ Severity | ≣ Title | ≣ |
| | 01/06/16 16:25 | Warning | Alert1 | |
| | | 1 | - 1 of 1 Results | |

2. Click on the date link in the Publish column to view the details of the Alert

3. Click Done to close and retain the Alert

Or, select Dismiss to delete it from the pop-up window and disable the flashing icon

4. To dismiss one or multiple Alerts within the Alerts list, check the boxes next to the relevant Alerts and then select the Dismiss option

| Alerts | | | | × |
|--------|----------------|------------|--------------------|---|
| | | | | |
| Alert | 5 | | | |
| Di | smiss RS | S Feed | | |
| ⊠ | Publish | ₹ Severity | ≣ Title | ≣ |
| V 🥼 | 01/06/16 16:25 | Warning | Alert1 | |
| | | | 1 - 1 of 1 Results | |

5. To subscribe to RSS feeds for Alert updates, select the RSS button.

4.3.1 Creating Alerts

To create an Alert:

- 1. Select Home>Alerts
- 2. Select New

The Alerts editor appears.

- 3. Enter a Publish and Dismiss date
- 4.

| Alert Details | Description |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Created | The current date and time. |
| Publish | The date on which the alert is published. Use the calendar icon to the right of the field, to select a Publish date. |
| | Set to a date and time in the future for publishing the Alert. |
| Dismiss | The date the Alert ceases to be available. Use the calendar icon to the right of the field, to select a Publish date. On this date, the Alert will disappear from a User's Alert list. |
| Severity | The type of Alert to be published. The choices are: Information – for general Alerts Warning – to warn Users of potential issues Urgent – to publish an urgent actionable message. |
| | The icon appearing with the message will depend on the type of Alert. |

| Alert Details | Description |
|---------------|--------------------------------------------------------------------------------------------------|
| User | The type of Users to receive the Alert, which include: |
| | Specific Customer or User |
| | User Role |
| | Personal Alert |
| | Organizational Units |
| | Public. |
| | In the Find User or Customer list, click search to select the recipient from the drop-down list. |
| | An Alert sent to a User Role will go to all Users with that Role. |
| | A personal Alert appears on the User's own screen at the Publish date. |
| | A Public Alert appears when the Public Alert link is selected on the Login Page. |
| Title | Enter the title of the Alert. |
| Message | Enter the main content of the Alert. |

- 5. Select the Severity for the Alert message
- 6. Select the User

Options include selecting User Roles, a specific User or personal.

- 7. Enter a Title for the Alert
- 8. Enter the Message content for the Alert
- 9. Click Save

Alerts with current Publish dates will be sent immediately.

| Alert Editor | r |

| | To receive alert updates on <u>RSS</u> feed. |
| | |
| | |
| | |
| | Path: p Words:7 |
| | Cancel Save |

10. Click Done.

4.3.2 Deleting Alerts

Alerts can be deleted within the List View by selecting one or more Alert checkboxes and clicking the Delete button. Alternatively, they can be deleted individually within the Alert Editor information screen by selecting the Delete button.

4.3.3 SLA Breach Alerts

Alerts are also used by the system to inform Users about SLA breaches. The Alert will be addressed to the User and assigned to the request that has failed to reach an SLA target. The breach will contain information such as the affected Request ID, and how the SLA has been breached.

5 Setup

The Setup enables the Administrator to configure the application and control the behavior of the system. You must configure the Email, LDAP, Database, ZENworks and ZENworks Import for the Service Desk system up and running.

This section includes the following:

- Section 5.1, "Setup Tab," on page 361
- Section 5.2, "Email," on page 362
- Section 5.3, "Custom Fields," on page 405
- Section 5.4, "Privileges," on page 411
- Section 5.5, "Customize," on page 429
- Section 5.6, "Localization," on page 439
- Section 5.7, "Licenses," on page 458
- Section 5.8, "Database," on page 461
- Section 5.9, "LDAP," on page 464
- Section 5.10, "PSS," on page 477
- Section 5.11, "SSO," on page 480
- Section 5.12, "Reports," on page 484
- Section 5.13, "Billing," on page 498
- Section 5.14, "AMIE," on page 532
- Section 5.15, "ZENWorks," on page 601
- Section 5.16, "ZENworks Import," on page 604

5.1 Setup Tab

| | ဂ္ဂ User | 🗦 R | eports | ዮ My A | ccount | <u>نې</u> | Setup | | | 🗅 смз | | | |
|-------|---------------|------------|-----------|--------------|----------|-----------|-------|-----|-----|---------|---------|------|----------|
| Email | Custom Fields | Privileges | Customize | Localization | Licenses | Database | LDAP | PSS | SSO | Reports | Billing | AMIE | ZENworks |

The following options are included:

- · Email configuration, including customizing all email templates used by the system
- Customize fields and Portal messages
- Integrate the system with external applications, define Open ID options and enable outbound Web Services functionality
- Define User, Customer, Request and System privileges
- Localize the application, including language of content automatically generated by the system, public holidays and time-zones for the scheduling functionality
- · Enable the Billing module for using Contracts, Purchase Orders and SLA costs
- Import Items via a.CSV file and AMIE.

The tabs available within Setup include:

- Email
- Custom Fields
- Privileges
- Customize
- Localization
- Licenses
- Database
- LDAP
- SSO
- Reports
- Billing
- AMIE
- ZENWorks

5.2 Email

- Section 5.2.1, "Email," on page 362
- Section 5.2.2, "Setup," on page 365
- Section 5.2.3, "Templates," on page 368
- Section 5.2.4, "SMS," on page 402
- Section 5.2.5, "Email Log," on page 404

5.2.1 Email

The Email sub-menu option is used to configure the system's incoming and outgoing email settings.

The system uses email to notify Customers about:

- Login information
- Request creation, updates and closure
- Contract renewals
- Invoice management
- Purchase Order creation.

Emails notify Service Desk Users of:

- Request allocation
- Escalations and SLA reminders, warnings and breaches
- · Amendments to requests made by other Users
- Addition or removal of requests from Groups
- Required request approvals.

For detailed information regarding managing requests using email polling see Email Polling and Request Creation in the Appendices of this guide.

Server Tab

To enter email server details:

| Outgoing Server | mail. mycompany .com |
| Authentication | None Login SSL TLS TLS (SSL) |
| Port | (Leave blank for default) |
| | Reset Test Save |

2. Enter the Receiving and Sending Details:

| Receiving | |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Incoming Server | The incoming server used by the system to receive emails. |
| Protocol | The protocol of the incoming email account- IMAP, IMAPS, POP3, POP3S. |
| Transport | This option is visible if IMAP or POP3 has been set for the email account protocol. Select to secure the transport layer to encrypt the whole channel, if relevant to your email server configuration. |
| Port | Can be left blank for the default, or enter a port. |
| Interval | Enter a timing interval if polling is enabled. |
| | This will be the period of time the system will use to check if any messages need to be polled. |
| User Name | Enter User Name for the incoming mail server. |
| Password | Enter the account Password. |
| Sending | |
| Reply To | The default system email address and the account that the email polling feature uses. |
| Outgoing Server | The outgoing (or SMTP) server used by the system to send emails. |
| Authentication | If your SMTP server requires sender identification before sending email select between Login, SSL or TLS depending on the server configuration. The User Name and Password fields will be displayed when options other than None are selected. |
| Port | Enter a different port, or leave blank to use the default. |
| User Name | When authentication is required, enter the SMTP authorization details. |
| Password | When authentication is required, enter the account password. |

3. Click Save.

Reset Button

Reset

To delete the content in all fields within the Server tab, select the Reset button. The system will display a message requiring verification of the Reset selection. Click OK to verify and clear all fields.

Test Button

To test if the email configuration is correct for sending email, click Test. This will send a message to the Administrator, using the Outgoing Server details that have been provided.

5.2.2 Setup

The Email Setup tab allows the Administrator to define the behavior of the email polling functionality.

To set the email functionality details:

1. Select Setup >Email > Setup

| Email | |
|--------------------------|--------------------------------------------|
| Server Set | up Templates SMS Log |
| General Settings | |
| Email Polling | Yes No |
| Include Banner | Yes No |
| Сору Туре | СС ВСС |
| Requests | |
| Create/Update via Email | (Uses Team emails aliased to this account) |
| Notify Alternate Team | Yes No |
| Self Mail | Yes No |
| Include Request Status | Yes No |
| Include Request Priority | Yes No |
| Include Request Subject | Yes No |
| Notes | |
| Parse Instance Prefix | Yes No |
| Default Recipients | Customers I Technicians |
| Default Locale | English |
| | Save |

2. Define the settings in line with your organizational requirements:

3. _____

| Email Polling | Enable Email Polling to allow the application to check for new email received in the mailbox on the incoming server defined within the Server tab. |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | For new messages that are received, the system will send a message to the sender acknowledging their message. System generated messages are customized within the Setup>Email>Templates tab. |
| | NOTE: This option will be locked down if the Create via Email option is selected. |
| Interval | Enter the time period the system will use to check the incoming server for any messages sent to the support system. |
| Include Banner | Select Yes to include a banner within emails sent from the system. |
| | The banner will be derived from: Setup>Customize>Setup>Public Banner. |
| Email Errors | When enabled, details of any system errors occurring while the application is running will be sent to the development lab. |
| Сору Туре | For emails sent within requests, define if the Technician is to be copied or blind copied the correspondence. |
| Requests | |
| Create/Update via Email | Select this option to enable requests to be created from emails addressed to the support system and Team addresses aliased on the email server. (See: Email Polling.) |
| | NOTE: Email Polling will be locked down to Yes when this option is selected and the Accept Anonymous option is displayed. |
| Accept Anonymous | When enabled, the system will create requests from emails received from email addresses that do not exist in the application's database. (Refer below for more information regarding this setting.) |
| Notify Alternate Team | When enabled, and if there is more than one Team created for a Process, within the Summary tab of a request the Alternate Team field is displayed. Members of the Alternate Team will be notified relative to the settings defined for the Current Team, and for New Notes, if Technicians is selected in the New Notes screen. |
| Self Mail | When set to Yes, new Notes created by a Technician or Customer are also sent to them when they save the Note. |

General Settings

| Include Request Status | When enabled, the system will include the request Status within the Email Subject line of any correspondence sent from the system, regarding a request. |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Include Request Priority | When enabled, the system will include the request Priority within the Email Subject line of any correspondence sent from the system, regarding a request. |
| Include Request Subject | When enabled, the system will include the content from the Subject line of a request within the Email Subject line of any correspondence sent from the system, regarding a request. |
| Notes | |
| Parse Instance Prefix | The Instance prefix is used to process email correspondence from multiple instances. If this is not required, set the option to No. |
| Default Recipients | Within the new Notes editor of requests, the default email settings can be defined for the recipient groups. Define the groups who are more likely to be sent every New Note created related to a request. |
| Default Locale | Set the default language file to be used for email correspondence. The option set is applied to the Email Locale field in the Customer and User Information screens and can adjusted on a per account basis, as required. |
| | NOTE: The content for automated emails sent from the system for languages other than English, is defined within the Localization>Content tab. |

4. Click Save.

Receiving emails from anonymous email addresses

When the Accept Anonymous option is enabled, the system will create requests from emails received from email addresses not recorded in the application. This process is managed by the System User being assigned as the Customer, and the original sender being added to the email address list, in the Notify section.

It should be noted, that

enabling this option increases the likelihood of spam emails being converted into unwanted requests in the system. Email administrators should ensure that spam filtering is performed prior to the request being received in the inbox polled by the application. It is not the function of the service management tool to monitor, parse or filter emails prior to the creation of records based on the contents of the target inbox.

5.2.3 Templates

- "Email Templates" on page 368
- "Request Approval Process" on page 374
- "Email Parameters" on page 377
- "Email Summary Templates" on page 382
- "Keywords" on page 390
- "Error Messages" on page 394
- "Out of Office" on page 397
- "SMS Templates" on page 398

Email Templates

- "Configuring Full Email Templates" on page 369
- "Approval Messages" on page 374

Administrators can customize the content and template details for emails automatically generated by the system within the Templates tab.

The labels for the Templates are generated in English, but can be customized within the Setup>Localization>Content tab.

The filter views within the Templates tab include:

| View Option | Description |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Email Templates | Allows Users to customize the content and insert parameters of emails automatically generated and sent by the system. |
| Email Summary Templates | Users configure the content of templates that are included in the automatically generated emails, which summarize the specific details of the matter at hand. See:Summary Templates |
| Email Keywords | Allows Users to enter alternative words for the system to use when sending mail and parsing emails received at the support email address. |
| | See: Keywords for a description of where the words are used by the system. |
| Error Message Templates | Allows the Use to customize the error messages automatically generated and sent by the system. See: Error Messages. |
| Out of Office | Allows the User to customize multiple Out of Office options for the system to identify in incoming email Subject lines, so it knows to ignore the email. See: Out of Office. |
| SMS Templates | Allows Users to customize the content and insert parameters for text messages automatically generated and sent by the system. |

Content for the automatically generated email messages sent by the system is configured within the Full Email Templates filter screen of the Email > Templates tab. In addition to customizing the content of the messages, there is also the facility to insert parameters for specific details sourced from the database.

The template parameters, look and feel of email messages sent in regard to Knowledge Base Articles, Items, Requests, Invoices and Contracts are configured within the Email Summary Templates filter screen of the Templates tab.

Configuring Full Email Templates

To configure messages:

1. Select Setup>Templates>Full Email Templates filter

The Full Email Template filter screen is displayed.

| Email | | | | | | | |
|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---|--|--|--|--|--|
| Server | Setup Templates SM5 Log | | | | | | |
| | Full Email Templates | • | | | | | |
| Name | ≜ Content | | | | | | |

Email Templates

| AccountInformation | Sent when a Customer or User is emailed the login details of their account. |
|----------------------------|-------------------------------------------------------------------------------------------------------------------------|
| AccountInformation Subject | Content to be included in the Email Subject line when a Customer or User is emailed the login details of their account. |
| ApproveChange | Message sent to Managers when an RFC moves to an Approval State. |
| | The configured message must indicate to Managers that they are specific with their reply, using: |
| | The words 'accept' or 'yes', to Accept the Change |
| | The words 'reject' or 'no', to Reject the Change. |

| Email Templates | | | | |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| ApproveServiceRequest | Message sent to Managers when a Service Request moves into an Approval State. | | | |
| | The configured message must indicate to Managers that they are specific with their reply, using: | | | |
| | The words 'accept' or 'yes', to Accept the Change | | | |
| | The words 'reject' or 'no', to Reject the Change. | | | |
| ClosedPrefix | Included at the beginning of the email that is sent to a customer when a request is closed. | | | |
| ClosedTechPrefix | Message template for an email sent to a technician when a request is closed. | | | |
| ClosedTechTimeout | Message template for an email sent to a technician when a request is closed automatically due to lack of customer response to the solution proposed by the technician. | | | |
| ClosedTimeout | Used by the handshake facility and prefaces emails sent as Incident Note using the Propose button. | | | |
| CloseRequest | Message included in the Email that uses the handshaking facility and proposes a Solution to the Customer. | | | |
| CloseRequestLink | The message sent with the hyperlink to enable Customers to keep a request open after a possible solution has been sent to them. This template is used in conjunction with the CloseRequest message when the Handshaking facility is used to by a Technician to propose a Note as a solution. | | | |
| CloseTech Request | Message template for an email sent to a technician after the Service Desk proposed a solution to the customer. It informs that the request will be closed if there is no action from the customer. | | | |
| ContractExpired Message | Email sent to a Customer when a Contract has expired and a new request is logged or an existing request is still open when the expiration date is hit. | | | |
| ContractTimeElapsed (Subject Line) | Subject line for ContractExpiredMessage, which is he email sent to a Customer when a Contract period has elapsed or all purchased support hours have been used. | | | |
| ContractTimeLow | Email sent to a Customer when the amount of time remaining on a Contract triggers the low time percentage threshold. (The default percentage is defined in the Setup>Billing>Contracts tab.) | | | |
| CreateChange | Included at the beginning of the email to a Customer when a Change Request is first created. | | | |
| CreateIncident | Included at the beginning of the email to a Customer when an Incident is first created. | | | |
| CreateProblem | Included at the beginning of the email to a Customer when a Problem is first created. | | | |
| CreateServiceRequest | Included at the beginning of the email to a Customer when a Service Request is first created. | | | |

| Email Templates | | |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| CreateTechChange | Message template for an email sent to a technician when a change request is created. | |
| CreateTechIncident | Message template for an email sent to a technician when an incident is created. | |
| CreateTechProblem | Message template for an email sent to a technician when a Problem request is created. | |
| CreateTechServiceRequest | Message template for an email sent to a technician when a service request is created. | |
| InvoicePrefix | Included at the start of an email sent to the Customer with a newly created Invoice. | |
| | (This email content is also used for the email sent to Customers when the Setup>Billing>Contracts option is enabled and the number of days for the Subscription "Contract Renewal Time" is triggered.) | |
| ItemStatusChangePrefix | Included at the beginning of the email sent to a Customer when an Item Status has been amended and the option to notify customer is selected in the Item Information tab. | |
| LDAPInformation | Sent when a new Customer or User is emailed the login details of their account after an authentication server synch. | |
| NewAttachmentToTech | Sent to a User when a new attachment is added to a request in the Customer Portal. | |
| NoAccount | This message is sent to a Customer when they have attempted to log an Incident via Email but are not registered with the system. | |
| | NOTE: The Subject line of this email can be customized in the Error Message Templates filter of the Email>Templates tab. | |
| NoContractCreate | Message sent to a Customer to inform them that work cannot | |
| RequestSummary | commence on newly logged request as no contract is in place. | |
| NoContractReminder | Reminder message sent to a Customer to inform them that | |
| Summary | work cannot commence on newly logged request as no contract is in place. | |
| NoteClosedPrefix | Email sent to a Customer when they have sent an email Note to the system, when a request was already closed. | |
| NotePrefix | Included each time a new Note is associated with an existing request. | |
| NoteTechPrefix | Message template for an email sent to a technician when a the customer follow-up is added as a note to an existing request. | |
| PasswordLost | Sent when a Customer or User is emailed their account information for login as a result of their selecting the Forgot Password link on the Login Page. | |

Email Templates

| PasswordQuestion | Sent when a Customer or User is emailed a challenge question for resetting their password for login as a result of their selecting the Forgot Password link on the Login Page. (The Password Questions option is enabled in the Setup>Privileges>System tab. The questions/answers are set within the Customer/User My Account Information screen.) | | | |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| PasswordReset | Sent when a Customer or User is emailed their account information for login after their Password has been re-set within the Customer Information or User Information screen. | | | |
| PlannedOutagePrefix | Included in the email sent when an Item is scheduled to be taken offline. | | | |
| RequestAccepted | Acknowledgement sent to the person responsible for a Request | | | |
| Prefix | in an Approval State, when a Request is approved. | | | |
| RequestDeescalate | When a request is manually de-escalated this message is sent to the newly assigned Technician. | | | |
| FromTo | | | | |
| RequestDeescalate | When a request is manually de-escalated this message is sent to the previously assigned Technician to let them know that the | | | |
| NotAvailable | request is no longer available for them to work on. | | | |
| RequestEscalateFromTo | When a request is manually escalated this message is sent to the newly assigned Technician. | | | |
| RequestEscalateNotAvailable | When a request is manually escalated this message is sent to the previously assigned Technician to let them know that the request is no longer available for them to work on. | | | |
| RequestReassignedManager Prefix | This message is sent when the Manager responsible for processing the approval of a request is changed and is sent to the previously assigned Manager. | | | |
| RequestReassignedManager | The message included in an email when a request moves from | | | |
| ToTechPrefix | a Manager Approval State to the newly assigned Technician User. | | | |
| RequestReassignPrefix | When a request is reassigned this message is sent with the request details to the previously assigned User. | | | |
| RequestReassignToPrefix | When a request is reassigned this message is sent with the request details to the newly assigned User. | | | |
| RequestRejectedPrefix | Acknowledgement sent to the person responsible for a Request in an Approval State, when a Request is rejected. | | | |
| RequestStatusChanged | The content of an email sent when the Status of a request is | | | |
| Prefix | moved from Pending-No Contract to the default open state of the assigned Workflow. This is sent to the assigned Technician. | | | |
| RequestStatusChanged | The content of the sent when the Status of a request is moved | | | |
| Subject | from Pending-No Contract to the default open state of the assigned Workflow. This is sent to the assigned Technician. | | | |
| RequestWorkaround | Message sent when a Workaround is applied to a request in the Analysis tab and emailed to the Customer. | | | |

| Email Templates | |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Responder | Message sent from the monitored email account when the system does not accept new requests via email. |
| Signature | The details included at the bottom of emails sent from the system. |
| | NOTE: Signatures can be customized on a per Team basis in the Setup>Localization>Content tab. |
| SlaBreached | Email sent to the assigned User when an SLA is breached. |
| SlaBreachedSubject | The content in the Subject line of an email sent to an assigned User and Service Level Manager, and if configured within the SLA the Team Lead, when an SLA is breached. |
| SlaTimeElapsed | Sent to the assigned User and Service Level Manager, and if configured within the SLA the Team Lead, when an SLA Reminder/Warnings is triggered. |
| SlaTimeElapsedSubject | The content in the Subject line of an email sent to an assigned User and Service Level Manager, and if configured within the SLA the Team Lead, when an SLA Reminder/Warning is triggered. |
| SurveyCompleted | Thank you message automatically generated for Customers who have submitted a completed survey. |
| SurveyPrefix | Message sent when a Customer or User is invited to complete a survey. |
| SurveyReminderPrefix | Message sent to a Customer or User to remind them to complete a survey. |

 Click on the required message name link The default text will be displayed.

NOTE: Approval Change, Approval Service Request, Create Problem and Create Change, Create Service Request apply to Service Manager Only.

Approval Messages

As the system allows Managers to approve or reject RFCs and Service Requests via email, the automatically generated emails must include specific instructions for the Manager to include either the words "accept" or "yes" to approve the RFC, or "reject" or "no" to reject the RFC in their reply. This is essential as the system will only recognize these key words when it automatically processes the email reply sent by the Manager.

NOTE: This is only applicable to Service Manager.

To use the Manager Approval Process via email, the system's email set-up must include the activation of the Email Polling functionality and the relevant Team details must include an incoming email address.

Request Approval Process

As part of the Request Fulfillment approval process, Users that have a Manager Role and are assigned to a Service Request Team can approve or reject Service Requests. To allow a Manager to approve a Request they must be assigned to the Service Request Workflow Approval State. (See: Service Request Teams.) Then, when a Request is moved into an Approval State, the Manager is assigned the Request allowing them to view and reject or accept the Request.

The security of the approval process can be enhanced by forcing the assigned Manager to re-enter their User Name and Password when processing a request. This is achieved by enabling the Strong Authentication option for the Team. (See: Service Request Teams.)

The service management system allows Managers to approve a Request either via the application's interface or email.

Accept or Reject a Service Request via the application

- 1. Select the Request tab
- 2. Select the filter option Pending Approvals

From the list provided select a Request ID hyperlink.

3. Click Edit

The Accept and Reject will be available to process the Request.

| Service Request | |
|-----------------|--------------------------|
| Team | Service Request Team |
| 😤 Workflow | Service Request Workflow |
| Status | Approval Required |
| Next Action | <u>A</u> A |

4. Select the Next Action option

Click 🎘 (Accept) or 🧏 (Reject) button to move the Service Request into the relevant predefined state and re-assign the Request to a Technician allocated to the status.

5. Enter Authentication details, if prompted

When the Strong Authentication option is enabled for the Change Team associated with the request, an Approve Change Request window is displayed prompting the User to enter their

Password details. Enter your Password and select the Authenticate button and click **X** to close the pop-up window.

6. Enter additional details in the Notes Tab, if relevant

A Notes window is displayed to allow the Manager to add detailed information regarding the approval option selected.

| Note Time + 🗘 | 0 (Minutes) 05/15/12 14:2 | 7 🖺 S | ielect a template 🗘 |

| Path: | | | Words:0 |
| Path: | • | Visibility | Words:0 |
| | • | - | // |
| Attachments | + | - | OPrivate OPublic |

7. Click Add Note.

Note that the Manager User will no longer be able to edit the Request after the selection is made, and the Request will continue through the Service Request Workflow Lifecycle.

8. NOTE: If the Approval State is configured to be an Item Details Editable state, the Manager can amend the Item details when in this State.

Accept or Reject a Request via email

To use the Manager Request approval process via email, the following configuration must be in place:

The Administrator must configure the system Setup>Email screens to include:

- Email Polling functionality
- Create via Email option
- Customise the ApproveServiceRequest email content, as required.

The Supervisor must also include an incoming email address for the Service Request Team.

| Email | | |
|-------|-------------------------|--------------------------------------------|
| 9 | Server Set | tup Templates SMS Log |
| | General Settings | |
| | Email Polling | Yes No |
| | Interval | 1 (minutes) |
| | Include Banner | Yes No |
| | Сору Туре | CC BCC |
| | Requests | |
| | Create/Update via Email | (Uses Team emails aliased to this account) |

When a Service Request is escalated to an Approval State, an email is sent to the assigned Manager User informing them that a Request is pending approval. The Manager can approve or reject the Service Request by simply replying to the escalation email using the words Accept /Yes or Reject/No.

When the system polls for incoming email, the Manager's response is automatically applied to the relevant Request and based on the Manager's response, the Request is routed to a Technician allocated to the next Workflow State. The Manager is also sent a confirmation email informing them that their selected action has been applied to the Request.

Example of email sent to Manager:

This Service Request is pending your approval.

Please access the Service Desk to approve the Service Request manually.

Alternatively, you may reply to this email: To Accept the Service Request, include the words 'accept' or 'yes'. To Reject the Service Request, include the words 'reject' or 'no'.

| Service Request Information | | |

Email Parameters

The drop-down options included in the Email Parameters lists used within the Full Email Templates throughout the application, are drawn from the following parts of the system:

Parameter options for Account Information, LDAP Information, Password Information templates:

| Parameter | Source |
|--------------|--------------------------------------------------------------------------------------------------------------|
| Account Type | The Default User Role derived from the Customer or User information screen. |
| First Name | Derived from Customer or User information screen. |
| Full Name | Derived from Customer or User information screen and combines the First and Last Name. |
| Password | Derived from Customer or User information screen. |
| Title | Derived from Customer or User information screen. |
| | NOTE: This option is visible if Enable Titles is selected within the Admin>Setup>Privileges>Customer. |
| Username | Derived from Customer or User information screen. |

Parameters for the request, Approve Change, Approve Service Request, Closed, Closed Timeout templates:

| Parameter | Source |
|-------------------|-------------------------------------------------------------------------------------|
| Classification | Drawn from the Classification field, in the Summary tab of a request. |
| Close Date | Shows the Close Date as recorded in the Service Terms information of the request. |
| Country | Derived from the Country field window in the Customer Tab of a request. |
| Customer Name | Derived from the Customer Field in the Summary tab of a request. |
| Customer Phone | Derived from the Contact Phone Field in the Summary tab of a request. |
| Customer Room | Derived from the Item Room Field in the Summary tab of a request. |
| Date Style | Detail drawn from the Admin>Setup>Privileges> Customer tab. |
| Due Date | Derived from the Service Terms window in the Summary Tab of a request. |
| Email Locale | Derived from the Contact tab of the Customer Information details. |
| FSC Date | Derived from the Service Terms window in the Summary Tab of a Change Request. |
| Handshaking Close | Derived from the Org Unit associated with the |
| Days | Customer or number of default days defined in the Setup>Privileges>Requests tab. |
| Identifier | Derived from the Item Identifier Field in the Summary tab of a request. |

| Parameter | Source |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item # | The Item Number is derived from the Item details recorded in the Customer Tab of a request. |
| Item Type | The Item Type is derived from the Item details recorded in the Customer Tab of a request. |
| Last Note ID | Shows the system generated Note identification number as a hyperlink, for the Note last added to a request. When clicked by the Customer or User, defaults to the request information screen for that request inside the system. |
| Notes | Details the number of Notes added to a request. |
| Open Date | Derived from the Service Terms window in the Summary Tab of a request. |
| Org Unit | Derived from the Org Unit field window in the Customer Tab of a request. |
| Priority | Derived from the Priority Details as recorded in the Summary tab of a request. |
| Process | Shows if the request is a Service Request, Incident, Problem or Change. |
| Request Description | Derived from the initial Description entered for the request, as recorded in the Summary tab. |
| Request Id | Shows the system generated request identification number. |
| Request URL | Shows the request identification number as a URL to allow the Customer to enter the system within the specific request screen by clicking the URL. |
| Subject | Derived from the Subject entered for the request that is populated from an Email Subject line or directly into the application, and recorded in the Summary tab. |
| Team | Shows the Team assigned to manage the request. |
| Team Phone | Display the Team telephone number as recorded in the Team Information screen. |
| Technician Name | Shows the name of the Technician assigned to the request. |
| Title | Derived from Customer or User information screen. |
| | NOTE: This option is visible if Enable Titles is selected within the Admin>Setup>Privileges>Customer. |

Parameter available in Contract Time templates:

| Parameter | Source |
|-----------|-----------------------------------------------------------------------------------|
| Threshold | Draws the percentage from the Threshold field in the Setup>Billing>Contracts tab. |

Options for the Invoice templates:

| Parameter | Source |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Adjustment | Drawn from the Cost Calculations field, and is the amount that is deducted from the sub-total. |
| Customer Name | Derived from the Customer Details Name field on the invoice. |
| Customer Title | Derived from Customer Information screen. |
| | NOTE: This option is visible if Enable Titles is selected within the Admin>Setup>Privileges>Customer. |
| Delivery Status | Shows the assigned Delivery Status from the Invoice. |
| Due Date | Drawn from the Order Details of the invoice. |
| Entered By | Drawn from the Order Details of the invoice. |
| Invoice # | Shows the system generated Invoice Number. |
| Invoice Date | Drawn from the Order Details of the invoice. |
| Invoice Status | Derived from the Status field of the invoice. |
| Line Items Total | Derived from the Costs section of the Invoice and shows the overall cost for Items on the invoice. |
| List of Item Type Line Items | When Items are associated with an invoice, shows the details recorded in the Item Type field. |
| List of Maintenance Contract Line Items | When Contracts are associated with an invoice, shows the details recorded in the Contract Type Name field. |
| Notes | Shows any details recorded in the Notes field of the invoice. |
| Order Date | Drawn from the Order Details and shows the date the invoice was received. |
| Org Unit | Derived from the Customer Details and shows the customer's associated Org Unit. |
| PO Number | Drawn from the Order Details and shows the Purchase Order number associated with the invoice. |
| Payment Date | Shows date of payment for the invoice based on details recorded in the Invoice Status section. |
| Payment Status | Shows if payment has been received for the invoice based on details recorded in the Invoice Status section. |
| Processed By | Drawn from the Order Details and shows the name of the User who processed payment of the invoice. |
| Shipping | Shows the Shipping Costs as derived from the Costs section of the invoice. |
| Shipping Date | Derived from the Status section of the invoice and shows the expected shipping date of goods. |

| Parameter | Source |
|----------------------|--------------------------------------------------------------------------------|
| Tax | Drawn from the Costs Section and shows the tax applied to the invoice. |
| Tax Rate | Drawn from the Costs Section and shows the tax rate applied to the invoice. |
| Terms and Conditions | Shows details recorded in the Terms and Conditions field of the invoice. |
| Total | The Grand Total of the Invoice, including tax and any adjustments. |
| Tracking Number | Drawn from the Tracking Number field within the Status section of the Invoice. |

Parameters for the Item Status Change template:

| Parameter | Source |
|-------------|-------------------------------------------------------------------------------------|
| Category | Shows the Item Category from the Item Information tab. |
| Criticality | Shows the assigned Criticality of the Item as recorded in the Item Information tab. |
| Item Number | Shows the Item Number as recorded in the Item Information tab. |
| Item Type | Details the Item Type as entered in the Item Information tab. |
| Status | Shows the Status of the Item as recorded in the Item Information tab. |

Parameter for the New Attachment template:

| Parameter | Source |
|-----------|------------------------------------------------------------------------------------------------|
| File Name | Allows the file name of the newly received attachment to be included in the email to the User. |

Parameters for the Escalation templates:

| Parameter | Source |
|---------------------|--------------------------------------------------------------------------------------------|
| Current Technician | Shows the name of the newly assigned Technician. |
| Previous Technician | Shows the name of the Technician who was previously assigned the request. |
| Process | Shows the ITIL Process of the request, i.e., Change, Incident, Problem or Service Request. |
| Request ID | Shows the Request identification number. |

Parameters for the request Status update templates:

| Parameter | Source |
|-----------------|--------------------------------------------------------------------------------------------|
| New Status | Shows the details of the newly assigned Workflow State. |
| Previous Status | Shows the Status name of the previously assigned to the request. |
| Process | Shows the ITIL Process of the request, i.e., Change, Incident, Problem or Service Request. |
| Request ID | Shows the Request identification number. |

Parameters for the SLA templates:

| Parameter | Source |
|--------------|--------------------------------------------------------------------------------------------|
| Hr/Min | Shows the time as recorded in hours or minutes, based on the SLA configuration. |
| Name | Shows the name of the SLA. |
| Phase | Shows the SLA phase of Response Time, Restoration Time or Resolution Time. |
| Process | Shows the ITIL Process of the request, i.e., Change, Incident, Problem or Service Request. |
| Time Elapsed | Shows the amount of time passed for the phase of the SLA. |
| Time Limit | Shows the amount of total time associated with the phase of the SLA. |

Parameters for the Survey templates:

| Parameter | Source |
|---------------------|--------------------------------------------------------------------|
| Description | Shows the content included in the Description field of the survey. |
| Name | Shows the Title of the survey. |
| Number of Questions | Shows the number of questions included in the survey. |

Email Summary Templates

Automated email messages sent in relation to requests, Knowledge Base Articles, Items, Invoices and Contracts include a summary table of information or template. The information included in these tables, parameters, look and feel are configured within the Email Summary Templates filter screen of the Templates tab.

Knowledge of HTML would be useful when customizing the templates, but is not mandatory.

| Email | | |
|-----------------|-----------------------------|---------------------------|
| Server | Setup Templa | ates SMS Log |
| | | Email Summary Templates 💌 |
| Name | <u>≜</u> Content | |
| ArticleSummary | {{Article Type}} Informa | tion |
| | {{Article Type}} #: | {{Article ID}} |
| | Created: | {{Created}} |
| | Overview: | {{Overview}} |
| | Content: | {{Content}} |
| | | |
| GroupSummary | | |
| oroupoutinitary | Group Information | |
| | Group #: | {{Group #}} |
| | Start Date: | {{Start Date}} |
| | Status: | {{Status}} |
| | {{List of Active Requests}} | |
| InvoiceSummary | Invoice Information | |
| | Invoice #: | {{Invoice #}} |
| | Invoice Status: | {{Invoice Status}} |
| | Order Date: | {{Order Date}} |
| | Invoice Date: | {{Invoice Date}} |
| | Shipping Date: | {{Shipping Date}} |
| | Due Date: | {{Due Date}} |
| | Payment Date: | {{Payment Date}} |
| | Delivery Status: | {{Delivery Status}} |

The templates for messages that can be configured within this screen include:

| Message | Description |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Article Summary | Email that notifies User about the pending Review date of a Knowledge Base Article. |
| Group Summary | Email sent to the Users when a Request Group is created, updated or closed. |
| Invoice Summary | Email sent to a Customer that summarizes their Invoice information and included in all correspondence regarding the Invoice. This is forwarded with the InvoicePrefix content that is configured in the Email>Templates>Full Email Templates filter view. |
| | This template is also used for the email sent to Customers when the Setup>Billing>Contracts option is enabled and the number of days for the Subscription "Contract Renewal Time" is triggered. |
| Item Summary | Email sent to a Customer when a Service Item moves into an inactive State, when the email notification option is selected within the Item. |

| Message | Description |
|------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Maintenance Contract Summary | Email sent to a Customer including their service maintenance contract details. |
| Request Summary | Email sent to Users when a request is created or updated. |
| Survey Summary | The survey summary template is included in system generated emails regarding survey notification and reminders. |

To customize the message template:

- 1. Select Setup > Email > Templates
- 2. Select the Email Summary Templates filter
- 3. Click the Template Name hyperlink
 - The HTML editor appears.
- 4. Modify the table, as required

As part of the customization, the Administrator can use system parameters included in the Insert Parameter drop down list. Using these options ensures the customized template includes the correct format for the information to be sent in the email.

| 5 | |
|---|---|
| - | • |

| lcon | Description |
|------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Insert Parameter | The drop-down list options ensure that the HTML correct format is used for these details to be included on the customized message. |
| Restore Defaults | Restores the System default email message. |

- 6. Adjust the Date Style format, if relevant
- 7. Click Save.

Template Field Options

ArticleSummary

This template is included in the system generated emails for Knowledge Base Article reviews.

| Field | Source |
|---------------|---------------------------------------------------------------|
| Article ID | Knowledge Base Article number. |
| Article Title | Displays content drawn from the Title field. |
| Article Type | Shows if it is a general Article, Solution Workaround or FAQ. |
| Content | Drawn from the Title field of a KBA. |
| Created | Displays the date the Article was created. |
| Overview | Derived from the Problem field of a KBA. |

GroupSummary

This template is included in system generated emails when a request group is created, updated and closed.

| Field | Source |
|-------------------------|-------------------------------------------------------------------------------------|
| Description | Derived from the Description field on the Details tab of a requests group. |
| Group # | The identifying group number generated by the system for the request group. |
| List of Active Requests | Indicates the number of requests in an Active State contained in the request group. |
| Name | Drawn from the Name field on the Details tab of a request group. |
| Start Date | Is derived from the date that a request group is created. |
| Status | Derived from the Status field on the Details tab of a request group. |

InvoiceSummary

The Invoice Summary template is used when the Email button is selected within the Invoice Editor screen and when an Invoice is created and updated.

| Field | Source |
|------------------------------|--------------------------------------------------------------------------------------------------------------|
| Adjustment | Drawn from the Cost Calculations field, and is the amount that is deducted from the sub-total. |
| Customer Name | Derived from the Customer Details Name field on the invoice. |
| Customer Title | Derived from Customer Information screen. |
| | NOTE: This option is visible if Enable Titles is selected within the Admin>Setup>Privileges>Customer. |
| Delivery Status | Shows the assigned Delivery Status from the Invoice. |
| Due Date | Drawn from the Order Details of the invoice. |
| Entered By | Drawn from the Order Details of the invoice. |
| Invoice # | Shows the system generated Invoice Number. |
| Invoice Date | Drawn from the Order Details of the invoice. |
| Invoice Status | Derived from the Status field of the invoice. |
| Line Items Total | Derived from the Costs section of the Invoice and shows the overall cost for Items on the invoice. |
| List of Item Type Line Items | When Items are associated with an invoice, shows the details recorded in the Item Type field. |

| Field | Source |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------|
| List of Maintenance Contract Line Items | When Contracts are associated with an invoice, shows the details recorded in the Contract Type Name field. |
| Notes | Shows any details recorded in the Notes field of the invoice. |
| Order Date | Drawn from the Order Details and shows the date the invoice was received. |
| Org Unit | Derived from the Customer Details and shows the customer's associated Org Unit. |
| PO Number | Drawn from the Order Details and shows the Purchase Order number associated with the invoice. |
| Payment Date | Shows date of payment for the invoice based on details recorded in the Invoice Status section. |
| Payment Status | Shows if payment has been received for the invoice based on details recorded in the Invoice Status section. |
| Processed By | Drawn from the Order Details and shows the name of the User who processed payment of the invoice. |
| Shipping | Shows the Shipping Costs as derived from the Costs section of the invoice. |
| Shipping Date | Derived from the Status section of the invoice and shows the expected shipping date of goods. |
| Тах | Drawn from the Costs Section and shows the tax applied to the invoice. |
| Tax Rate | Drawn from the Costs Section and shows the tax rate applied to the invoice. |
| Terms and Conditions | Shows details recorded in the Terms and Conditions field of the invoice. |
| Total | The Grand Total of the Invoice, including tax and any adjustments. |
| Tracking Number | Drawn from the Tracking Number field within the Status section of the Invoice. |

ItemSummary

This template is included in system generated emails for Item Status changes:

| Field | Source |
|-------------|-------------------------------------------------------------------------------------|
| Category | Shows the Item Category from the Item Information tab. |
| Criticality | Shows the assigned Criticality of the Item as recorded in the Item Information tab. |
| Item Number | Shows the Item Number as recorded in the Item Information tab. |
| Item Type | Details the Item Type as entered in the Item Information tab. |
| Status | Shows the Status of the Item as recorded in the Item Information tab. |

MaintContractSummary

This template is included in system generated emails regarding the creation and update of service contracts.

| Field | Source | |
|---------------|----------------------------------------------------------------------|--|
| Contract # | Shows the system generated Contract Number. | |
| Contract Type | Specifies if the Contract is a Per Incident or Per Item Contract. | |
| End Date | Includes the date the current Contract date ends. | |
| Invoice # | Shows the system generated Invoice Number. | |
| Remaining | Shows the amount of time remaining on a Contract. | |
| SLA | Includes the name of the SLA included as part of the Contract. | |
| Start Date | Shows the commencement date of the current valid Contract. | |

MaintContractSummaryByMonth

This template is included in system generated emails regarding the creation and update of service contracts that are automatically renewed on a monthly or quarterly basis.

| Field | Source |
|---------------------|-------------------------------------------------------------------|
| Contract # | Shows the system generated Contract Number. |
| Contract Type | Specifies if the Contract is a Per Incident or Per Item Contract. |
| End Date | Includes the date the current Contract date ends. |
| Interval End Date | Shows the contract. |
| Interval Remaining | Shows the contract. |
| Interval Start Date | Shows the contract. |
| Invoice # | Shows the system generated Invoice Number. |
| Remaining | Shows the amount of time remaining on a Contract. |
| SLA | Includes the name of the SLA included as part of the Contract. |
| Start Date | Shows the commencement date of the current valid Contract. |

OutageSummary

This template is included in system generated emails related to Planned Outages.

| Field | Source |
|-------------------------|------------------------------------------------------------------------|
| Outage Items | Shows the details of Items associated with the Outage. |
| Outage Reason | Displays the content of Reason field in the Outage information screen. |
| Outage Related Requests | Shows Requests related to the Outage. |
| Outage Schedule | Details the Start and End Date of the Outage. |

RequestSummary

The request summary template is included in emails relating to the creation, update and closure of requests.

| Field | Source |
|----------------|-------------------------------------------------------------------------|
| Classification | Drawn from the Classification field, in the Summary tab of a request. |
| Close Date | Derived from the Service Terms window in the Summary Tab of a request. |
| Country | Derived from the Country field window in the Customer Tab of a request. |
| Customer Name | Derived from the Customer Field in the Summary tab of a request. |

| Field | Source |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Customer Phone | Derived from the Contact Phone Field in the Summary tab of a request. |
| Customer Room | Derived from the Item Room Field in the Summary tab of a request. |
| Date Style | Detail drawn from the Admin>Setup>Privileges> Customer tab. |
| Due Date | Derived from the Service Terms window in the Summary Tab of a request. |
| Email Locale | Derived from the Customer Information details screen and defines the language used by emails sent from the system. |
| FSC Date | Derived from the Service Terms window in the Summary Tab of a Change Request. |
| Handshaking Close Days | Drawn from the Admin>Setup>Privileges>System, unless overridden by the number of days defined in the Super>User> OrgUnit>Details tab. |
| Identifier | Derived from the Item Identifier Field in the Summary tab of a request. |
| Item # | The Item Number is derived from the Item details recorded in the Customer Tab of a request. |
| Item Type | The Item Type is derived from the Item details recorded in the Customer Tab of a request. |
| Last Note Id | Shows the system generated Note identification number as a hyperlink, for the Note last added to a request. When clicked by the Customer or User, defaults to the request information screen for that request inside the system. |
| Notes | Details the number of Notes added to a request. |
| Open Date | Derived from the Service Terms window in the Summary Tab of a request. |
| Org Unit | Derived from the Org Unit field window in the Customer Tab of a request. |
| Priority | Derived from the Priority Details as recorded in the Summary tab of a request. |
| Process | Shows if the request is a Service Request, Incident, Problem or Change. |
| Request Description | Derived from the initial Description entered for the request, as recorded in the Summary tab. |
| Request Id | Shows the system generated request identification number. |
| Request URL | Shows the system generated request identification number as a hyperlink. When clicked by the Customer or User, defaults to the request information screen for that request inside the system. |

| Field | Source |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Subject | Derived from the Subject entered for the request that is populated from an Email Subject line or directly into the application, and recorded in the Summary tab. |
| Team | Shows the Team assigned to manage the request. |
| Team Phone | Display the Team telephone number as recorded in the Team Information screen. |
| Technician Name | Shows the name of the Technician assigned to the request. |

SurveySummary

The survey summary template is included in system generated emails regarding survey notification and reminders.

| Field | Source |
|---------------------|-------------------------------------------------------|
| Description | Drawn from the Survey Description Field. |
| Name | Displays the Name given to the Survey. |
| Number of Questions | Shows the number of questions included on the Survey. |

Keywords

Keywords are used by the system to identify how to handle inbound and outbound email from the system.

The following table includes a list of all Keywords that are used by the system, which can be customized, and where they in the appear in the application:

| Keyword | Direction | Description |
|------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| Accept | Inbound | Accept or Yes is used to Approve Requests and must be included in the approval email. |
| Accepted | Outbound | Included in Subject line for emails generated when a request has been accepted and sent to the person responsible managing the approval. |
| AddToGroup | Outbound | Not Used. |
| Article | Outbound | Included in the Subject line of emails sent to Customers including an Knowledge Base Articles. |
| Author | Outbound | Included in content of Forum update message. |
| AutoReply | Outbound | Included in the Subject line of emails for error messages. |

| Keyword | Direction | Description |
|----------------|---------------------|-----------------------------------------------------------------------------------------------------------|
| ChangeRequest | Inbound Outbound | Customer must include in email Subject line when updating a Change Request. |
| | | Automatically included in Subject line of Change Request emails. |
| ChatLog | Outbound | Used in the Subject line of emails sent to Customer with a copy of a chat transcript. |
| Classification | Inbound | Included in Subject line with keyword "Item" e.g. Item Classification. Cannot be used alone. |
| Closed | Outbound | Included in Subject line of email responding to request, e.g. Incident Closed. |
| Contract | Outbound | Used in Subject line regarding Contract activity (i.e, Contract Active or Contract Low). |
| Created | Outbound | Included in Subject line of email responding to creation of a request, e.g. Request (or Invoice) Created. |
| Customer | Outbound | Keyword in Subject line of email regarding a Contract status, e.g. Customer Name Contract Active |
| DeEscalated | Outbound | Included in Subject line of email to User regarding a request being de- escalated. |
| Deleted | Outbound | Included in Subject line of email regarding a deleted request (or Invoice), e.g. Request Deleted. |
| Delivered | Outbound | Included in Subject line of email regarding an Invoice, e.g. Item Delivered. |
| Details | Outbound | Included in Subject line of email responding to a request, e.g. Request (or Invoice) Details. |
| Escalated | Outbound | Included in Subject line of email responding to request, e.g. Request Escalated. |
| Forum | Outbound | Keyword in Subject line e.g. Forum Update |
| Group | Outbound | Not used |
| Hours | Inbound & Outbound | Used in emails when the system refers to hours. For example, SLA and Contract emails. |

| Keyword | Direction | Description |
|---------------|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Incident | Inbound | Customer must include in Subject line, when updating an Incident. |
| | Outbound | Automatically included in Subject line for emails generated regarding Incidents. |
| IncidentQueue | Outbound | Inserted as the technician name when a request is assigned to the request Queue and the Technician Name is configured as a parameter in the outgoing email. |
| Invoice | Outbound | Keyword in Subject line, e.g. Invoice Created (or Details/Deleted/ Delivered). |
| Item | Inbound | Keyword in Subject line, e.g. Item Classification. |
| | Outbound | Keyword in Subject line e.g. Item # Contract Active, or Item # Status Update |
| Minutes | Inbound & Outbound | Used in emails when the system refers to minutes. For example, SLA and Contract emails. |
| NewNote | Outbound | Included in content of email advising that a new Note has been added to a request. |
| NewSolution | Outbound | Not used. |
| No | Inbound | Reject or No is used to Reject Requests and must be included in the rejection email. |
| OrgUnit | Outbound | Keyword in Subject line of email regarding contract status, e.g. OrgUnit Name Contract Active |
| PlannedOutage | Outbound | Included in Subject line of automated email notifications about planned Item outages. |
| Prefix | Inbound & Outbound | Included as prefix in email subject line. |
| Problem | Outbound | Automatically included in Subject line for emails generated regarding Service Requests. |
| Reassigned | Outbound | Included in the Subject line of emails sent regarding reassigned requests. |

| Keyword | Direction | Description | |
|-----------------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| ReceivedMessage | Outbound | Included in content of email replying to Customer attempting to update a request that has already been closed. (Subject line Request closed.) | |
| Reject | Inbound | Reject or No is used to Reject Requests and must be included in the rejection email. | |
| Rejected | Outbound | Included in Subject line for emails generated when a request has been rejected and sent to the person responsible managing the approval. | |
| Reminder | Outbound | Reminding the Manager to process a Request that is waiting for approval. | |
| Resolution | Outbound | Included in Subject line for emails generated regarding SLA Resolution times. | |
| Resolved | Outbound | Included in Subject line for emails generated regarding SLA Resolution times. | |
| Response | Outbound | Included in Subject line for emails generated regarding SLA Respnse times. | |
| Restoration | Outbound | Included in Subject line for emails generated regarding SLA Restoration times. | |
| ReviewReminder | Outbound | In Subject line of email reminding User to review Article, | |
| | | e.g. ReviewReminder Article # | |
| Service Request | Inbound Outbound | Customer must include in Subject line, when updating a Service Request. | |
| | | Automatically included in Subject line for emails generated regarding Service Requests. | |
| SolutionCreated | Outbound | Included in Subject line of email to Customer when a solution has been created for an open request. | |
| SolutionFound | Outbound | Included in Subject line of email to Customer when a solution has been found and applied to an open request. | |
| Status | Outbound | Included in Subject line for emails regarding , e.g. Item # Status Update | |

| Keyword | Direction | Description | |
|---------------|-----------|---------------------------------------------------------------------------------------------|--|
| SystemWarning | | Outbound: Warning of unpaid invoice. | |
| Unknown | Outbound | Used in emails when the value of parameters selected for inclusion are not known. | |
| Unpaid | Outbound | Warning of unpaid invoice. | |
| Updated | Outbound | Included in Subject line of email, e.g. Request Updated. | |
| Yes | Inbound | Accept or Yes is used to Approve Requests and must be included in the approval email. | |

Customize Keywords

To allow the system to recognize an alternative word for a System Keyword:

- 1. Select Setup>Email>Templates
- 2. Choose the Keywords filter view
- 3. Click on the relevant Name hyperlink

| hange Request 🔒 | Setup | Templates | SMS | Log |

- 4. Enter the customized word
- 5. Click Save.

Error Messages

Error Messages are automatically generated and sent by the system in relation to various application activities. The following table includes details for when each Error Message is used by the system:

| Message | Description |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ApprovalRequiredContent | The main content of an email sent to a Customer attempting to edit request, which is currently in "Approval" State. Such requests cannot be edited until approval is given. |
| ApprovalRequiredSubject | Email Subject Line content for ApprovalRequiredContent emails. |
| InvalidTeam | The main content of an email sent regarding the system receiving an email including an address and name of Team that does not match. For example, email may have been intended for Change Team but used Incident Team address, or vice versa. |
| NoAccessToltemContent | The main content of an email sent when the system receives an request via email that includes an Item# in the Subject line that the Customer does not have access. |
| NoAccessToltemSubject | The Subject Line of an email sent when the system receives an request via email that includes an Item# in the Subject line that the Customer does not have access. |
| NoIncidentFoundContent | The main content of an email sent by the system when it cannot find the Incident # referred to in the email. |
| NoIncidentFoundSubject | Email Subject Line content for NoIncidentFoundContent emails. |
| NoPermissionChangeContent | The body of the email sent when a Customer tries to log a Change Request via email and the"Create Change Requests" option is disabled in the Admin>Setup>Privileges>Customer tab. |
| NoPermissionChangeSubject | The Subject line content included on NoPermissionChangeContent emails. |
| NoPermissionIncidentContent | The body of the email sent when a Customer tries to log an Incident via email and the"Create Incidents" option is disabled in the Admin>Setup>Privileges>Customer tab. |
| NoPermissionIncidentSubject | The Subject line content included on NoPermissionIncidentContent emails. |
| NoPermissionProblemContent | The body of the email sent when a Customer sends a request a Problem Management Team. |
| NoPermissionProblemSubject | The Subject line content included on NoPermissionProblemContent emails. |
| NoPermissionRequestContent | The body of the email sent when a Customer tries to log a Service Request via email and the Create Service Requests option is disabled in the Admin>Setup>Privileges>Customer tab. |
| NoPermissionRequestSubject | The Subject line content included on NoPermissionRequestContent emails. |

| Message | Description |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NoServiceIncidentContent | The content of the email sent when a Customer tries to log an Incident for a Service by including the Item# in the Subject line of their email addressed to the Incident Team, and the"Service Incident" option is disabled in the Admin>Setup>Privileges>Customer tab. |
| NoTeamFound | The main content of an email sent by the system when it receives an email sent a Team email address that is not in the system. |
| NoUserFound | The Subject Line included on the NoAccount emails. |
| | NOTE: The content for emails sent by the system when it receives emails from addresses that do not exist in the system, i.e., NoAccount email, can be configured in the Full Email Templates filter of the Email>Templates tab. |
| RequestCreationErrorContent | The system generated email sent when an error occurs during the creation of request. An example of an error would be if the database becomes unavailable during the request creation process. |
| RequestCreationErrorSubject | The Subject line content included on the RequestCreationErrorContent email. |
| UnauthorizedApprove | The email sent when a Manager sends email attempting to approve change but does not have approval permission enabled. |
| UnrecognizedAction | The email sent when a Manager sends an email attempting to accept or reject a Change but does not use the keywords YES or ACCEPT, NO or REJECT. |

SMS Templates

The templated text and parameters for SMS messages sent from the system regarding requests and Item outages are configured within the SMS Templates filter screen of the Templates tab.

Template can be customized for the following messages sent from by the system:

| SMS Templates | |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ApproveChangeSMS | Message sent to Managers when an RFC moves to an Approval State. |
| ApproveServiceRequestSMS | Message sent to Managers when a Service Request moves into an Approval State. |
| ClosedRequestSMS | Included at the beginning of the email when a request is closed. |
| ClosedTimeoutSMS | Used by the handshake facility and prefaces emails sent as Incident Note using the Propose button. |
| CloseRequestLinkSMS | Message sent with the hyperlink to enable Customers to keep a request open after a possible solution has been sent to them. If the Customer clicks on the link, the automated close process is deactivated. |
| CloseRequestSMS | Message sent when the handshaking facility is applied and the Technician proposes a Solution to the Customer. |
| CreateRequestSMS | Message sent to a Customer when a request is created. |

| SMS Templates | |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| DeleteRequestSMS | SMS sent to a User when a request is deleted. |
| GroupCreateSMS | SMS sent to a User when a request group has been created in the system. |
| InvoicePrefixSMS | Message sent to a Customer with a newly created Invoice. |
| ItemStatusChangeSMS | SMS sent to a Customer when an Item Status is changed. |
| NewAttachmentToTechSMS | SMS sent to a Technician when a Customer uploads an attachment to a request in the Customer Portal. |
| NoteClosedPrefixSMS | SMS sent to when a new Note is added to a closed request. |
| NoteClosedSMS | Sent to a Customer when they have attempted to a Note to a request that is already closed. |
| NotePrefixSMS | Sent each time a new Note is associated with an existing request. |
| PlannedOutageSMS | Included in the SMS sent when an Item is scheduled to be taken offline. |
| RequestDeescalate | Message sent when a request is manually de- |
| FromToSMS | escalated this message is sent to the newly assigned Technician. |
| RequestDeescalate | Message sent when a request is manually de- |
| NotAvailableSMS | escalated this message is sent to the previously assigned Technician to let them know that the request is no longer available for them to work on. |
| RequestEscalateFromToSMS | Message sent when a request is manually escalated this message is sent to the newly assigned Technician. |
| RequestEscalateNot | Message sent when a request is manually escalated |
| AvailableSMS | this message is sent to the previously assigned Technician to let them know that the request is no longer available for them to work on. |
| RequestReassignedManager | This message is sent when the Manager responsible |
| PrefixSMS | for processing the approval of a request is changed and is sent to the previously assigned Manager. |
| RequestReassignedManager | The message included in an email when a request |
| ToTechPrefixSMS | moves from a Manager Approval State to the newly assigned Technician User. |
| RequestReassignPrefixSMS | When a request is reassigned this message is sent with the request details to the previously assigned User. |
| RequestReassignToPrefixSMS | When a request is reassigned this message is sent with the request details to the newly assigned User. |
| RequestStatusChanged | The content of an email sent when the Status of a |
| PrefixSMS | request is moved from Pending-No Contract to the default open state of the assigned Workflow. This is sent to the assigned Technician. |

To customize an SMS message template:

- 1. Select Setup > Email > Templates
- 2. Move to the SMS Templates filter

| Email | | | |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|--|
| Server | Setup Templates SM5 | Log | |
| | | Full Email Templates | |
| Name | ≜ Content | Email Summary Templates Email Keywords | |
| AccountInformation | Hello {{Full Name}}, | Error Message Templates Out of Office | |
| | Below is your Account login information: | SMS Templates | |
| | Account Type: {{Account Type}} Username: {{Username}} | | |
| | To retrieve your password please use 'Forgot Password' on the main login page. Please contact the administration team if you have any further questions. | | |
| AccountInformationSubject | Your Account Information | | |
| ApproveChange | This RFC is pending your approval. | | |
| | Please access the Service Desk to approve the RFC manual | у. | |
| | Alternatively, you may reply to this email: | | |
| | To Accept the RFC, include the words 'accept' or 'yes'. | | |
| | To Reject the RFC, include the words 'reject' or 'no'. | | |

3. Select the Message Name hyperlink

The HTML editor appears.

| lcon | Description |
|------------------|-----------------------------------------------------------------------------------------|
| Insert Parameter | The drop-down list options provides specific details to be included on the SMS message. |
| Restore Defaults | Restores the system default SMS message. |

5. Modify the message as required

As part of the customization, the Administrator can use the existing parameters included in the Insert Parameter drop down list. Using these options ensures the customized message use the correct format for the details regarding this information.

6. Click Save.

SMS Parameters

Parameters for new and updated Request templates:

| Parameter | Source |
|-------------|-------------------------------------------------------------------------|
| Process | Shows if the request is a Service Request, Incident, Problem or Change. |
| New Status | Shows the Workflow State assigned to the request. |
| Request Id | Shows the system generated request identification number. |
| Request URL | A direct link to the request. |

Parameters for the Group templates:

| Parameter | Source |
|------------|--------------------------------------------------------------------------------|
| Group # | Shows the Group ID number. |
| Group URL | A direct link to the request Group. |
| Group Type | Identifies the Group as Service Request, Incident, Problem or Change requests. |

Parameters for the Invoice template:

| Parameter | Source | |
|-------------|-------------------------------|--|
| Invoice # | Shows the Invoice number. | |
| Invoice URL | A direct link to the invoice. | |

Parameters for the Item Status Change templates:

| Parameter | Source |
|-------------|-----------------------------------------------------------------------|
| Item Number | Shows the Item Number as recorded in the Item Information tab. |
| Status | Shows the Status of the Item as recorded in the Item Information tab. |

Parameter for the New Attachment template:

| Parameter | Source |
|-----------|------------------------------------------------------------------------------------------------|
| File Name | Allows the file name of the newly received attachment to be included in the email to the User. |

Parameters for the Planned Outage templates:

| Parameter | Source |
|-------------------|----------------------------------------------------------------------------------------------|
| Outage End Date | Drawn from the End Date field in the Configuration>Planned Outages screen. |
| Outage Items | Shows the Items associated with the Planned Outage in the Configuration>Planned Outages tab. |
| Outage Start Date | Drawn from the Start Date field in the Configuration>Planned Outages screen. |

Parameters for the Escalation templates:

| Parameter | Source |
|---------------------|--------------------------------------------------------------------------------------------|
| Current Technician | Shows the name of the newly assigned Technician. |
| Previous Technician | Shows the name of the Technician who was previously assigned the request. |
| Process | Shows the ITIL Process of the request, i.e., Change, Incident, Problem or Service Request. |
| Request ID | Shows the Request identification number. |

5.2.4 SMS

The details of the SMS service providers that are to be applied within Customer and User account information screens, are configured within the SMS tab of the Setup>Email sub-menu option. Within this screen, the default Customer Service Provider is defined and automatically applied to Customer account information when SMS notification is selected as the preferred method of notification by the Customer or User.

The SMS functionality allows a subject line to be specified for providers that require a security token or account number in the subject line, with the message to be sent in the body. On install, the default setting is set to Subject, not requiring an account number or security token as the provider only requires email server information. This can be customized to meet the provider's requirements.

To configure the SMS setting:

1. Select Setup >Email > SMS

| Email | | | | |
|----------------|--------------------------|------------------------|------|-----|
| Server | Setup | Templates | SMS | Log |
| General | | | | |
| Target | Subject | Body | | |
| System Subject | | | | |
| Provider | | | | |
| Default | AT&T | • | | |
| Providers | Name 🔳 | Gateway | | |
| | AT&T | txt.att.net | | |
| | Cingular | mycingular.com | | |
| | Sprint PCS | messaging.sprintpcs.co | om | |
| | Verizon | vtext.com | | |
| | Voicestream/T- Mobile | voicestream.net | | |
| | | 1 - 5 of 5 Results | | |
| | | Ne | w | |
| | | (| Save | |

- 2. Set the Target location for sent message:
 - *Subject*: this is selected when the system is to include the message content in the email Subject Field, as the service provider only needs to know the email server details.
 - *Body*: this is selected when the system is to include the message content in the email Body, allowing a System Subject to be configured as required by the service provider, with content such as an account number or security token.

To edit the details of default entries:

- 1. Select the hyperlink of the relevant service provider
- 2. Amend details
- 3. Click Save.

To add a service provider:

- 1. Click New
- 2. Enter the Name and Gateway details
- 3. Select Save
- 4. Set the Default Customer Service Provider from the drop-down list options
- 5. Click Save.

5.2.5 Email Log

The Email Log facility allows an Administrator to access a complete list of email activity that occurs within the service management application. This enables an Administrator to determine whether an email is successfully sent or if it has failed. If an email fails to send, the system provides an explanation for the failure.

| Email | | | | | | | | | |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------|---------------------|---------|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|----|
| | Server | Set | up Ten | nplates | SMS | Log | | | |
| 🔎 Se | arch | | | | | | Filter: | All Mail | |

The Email Log screen has the following filter views:

| Filter | Description | |
|---------------------------------------|-------------------------------------------------------------------------------------------------------|--|
| All Mail Displays all email activity. | | |
| Inbound Mail | Lists the emails that have been sent to the system. | |
| Inbound Mail Errors | List the emails received by the system mailbox in error (i.e., from email addresses with no account.) | |
| Outbound Mail | Lists the emails that are sent from the application by Users. | |
| Outbound Sys Mail | Lists the emails that are automatically sent by the system e.g. Escalations, SLA breaches. | |

NOTE: Automatic system maintenance deletes 14 day old Email Log entries.

Search Email Activity

Administrators can conduct searches on inbound and outbound emails recorded in the system Email log.

To search for an email as an Administrator:

- 1. Go to the Setup>Email>Log tab
- 2. Select the Search button
- 3. Define:

| Option | |
|------------|---------------------------------------------------------------------------|
| Start Date | Enter the earliest relevant date for the system to include in the search. |
| End Date | Enter the latest relevant date for the system to include in the search. |
| Direction | Define if the search is to include either inbound or outgoing email. |
| Status | Define the email status option to be searched: |
| | Sent email |
| | Failed to send email |
| | Email set a Pending status |
| | Email Sent with Errors. |

5. Click Search.

5.3 Custom Fields

- Section 5.3.1, "Enabling a Custom Field," on page 405
- Section 5.3.2, "Data Type List," on page 408
- Section 5.3.3, "Custom Fields for Incidents, Change and Service Requests," on page 410
- Section 5.3.4, "LDAP/ADS Accounts Custom Fields," on page 411

The Custom Fields function allows screens in the system to be adapted to meet specific requirements of an organization, as additional fields can be created for different parts of the application.

Custom fields can be set for different system screens and include the option to select:

- Data type
- Style
- · Defining if the field is required or includes a description
- Determining whether it can be viewed or edited by the Customer (Incident, Change and Service Request

Custom fields only.)

NOTE: A maximum of 5 fields is allowed for each option.

5.3.1 Enabling a Custom Field

To enable a Custom Field:

1. Select Setup>Custom Fields

The Custom Fields screen appears.

2. From the Category Filter drop-down list select the screen option

The displayed list includes all screens where custom fields can be added.

| Custom Fields | | | |
|---------------|--------------------|-----------|-------------------------------------------------------------------------------------------------|
| | | Category: | Articles |
| Field | Data Type | Style | Change Requests |
| Custom 1 | String | Text | Groups Incidents Invoices Mixed Mode Accounts Org Units Partner Orgs Problems |
| Custom 2 | String | Text | |
| Custom 3 | String | Text | |
| Custom 4 | String | Text | Purchase Orders |
| Custom 5 | String | Text | Releases Service Requests |
| | 1 - 5 of 5 Results | | SLAs |

| Custom Fields | Custom Field Locations | |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------|--|
| Articles | Additional field for Articles in the Knowledge Base. | |
| Change Requests | Additional field for a Change Request. | |
| Customers | Additional field for Customer Information. | |
| Groups | Additional field for Service Request, Incident, Problem and Change Groups. | |
| Incidents | Additional field for Incident Information. | |
| Invoices | Additional field for Invoices. (Option visible when Billing>Invoices have been enabled for the system.) | |
| Org Units | Additional field for an Organizational Unit. | |
| Partner Orgs | Additional field for Partner Organization. | |
| LDAP/ADS Accounts | Customized LDAP/ADS fields can be used to map to a Directory Server when importing user account details. See Authentication. | |
| Problems | Additional field for Problem details. | |
| Releases | Additional field for Release Management details. | |
| Service Requests | Additional field for Service Request information. | |
| SLAs | Additional fields for Service Level Agreement Information screen. | |
| Users | Additional field for the Users Information screen. | |
| Purchase | Additional field for Purchase Orders. (Option visible when Billing>Purchase Orders have been enabled for the system.) | |

NOTE: Problem, Change, Release and Service Requests are in Service Manager only

1. To define a custom field, click on the appropriate field label hyperlink

An editable window appears.

| Custom Fields | | |
|---------------|-------------|--|
| Custom Field | | |
| Field Label | Custom 1 | |
| Category | Article | |
| Active | Yes No | |
| | Cancel Save | |

2. Toggle the Active field to Yes

Once activated, a list of options is displayed.

| Custom Fields | |
|--------------------|-------------|
| Custom Field | |
| Field Label | Custom 1 |
| Category | Article |
| Active | Yes No |
| Required | Yes No |
| Data Type | String |
| Style | Text List |
| Unique Value | |
| Default Value | |
| Input Validation | Yes No |
| Enable Description | Yes No |
| | Cancel Save |

| Options | Description |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Field Label | Edit the Field Label by entering the relevant name. (Required.) |
| | NOTE: The label entered within this field is applied to the English UI. For it to appear in another language, configure this label in the Setup>Localization>Content tab. |
| Active | Defines the Custom Field visibility. |
| Required | Defines if the field is mandatory when displayed. |

| Options | Description | |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Data Type | The format required for the field. | |
| | Select the data type from the following: | |
| | String (Text or List) | |
| | Number-Custom Field that requires a number | |
| | Boolean (Radio Buttons) | |
| | Date-Custom Field that requires a value in a date format | |
| | Currency- A currency can be defined for the Field | |
| | Hyperlink - A URL can be included in the field. | |
| Style | From the options provided, the way the data type will be displayed. | |
| | String custom field - either an open text field or a list, or | |
| | Boolean custom field - uses radio buttons to define Yes/No or True/False. | |
| Unique Value | When active, the system prevents the duplication data within the customized field. | |
| Input Validation | When enabled the Input Mask and User Mask can be defined. | |
| | <i>Input Mask</i> : A regular expression to use for data validation of values entered by a User (i.e., Zip/Post Code, telephone no.) | |
| | <i>User Mask</i> : A User Friendly representation of the Input Mask that Customers can understand should it appear in a validation error message. | |
| Enable Description | When enabled, a Description field appears that allows the User to enter details of what information the field is expected to capture. These details are accessible next to the custom field on the relevant screen. | |

5.3.2 Data Type - List

When the Data Type String - List is selected the List Contents field is displayed, which provides the facility to create a drop down list to be created as options within the field.

To create a new list entry within the List Contents field:

1. Right click the Entries link

The Create option is displayed

| Style | Text List |
|--------------------|-------------|
| List Contents | 🛺 Entries |
| Default Value | Create |
| Enable Description | Rename |
| Enable Description | Delete |
| | Cancel Save |

2. Click Create

A New node link displayed

| Style | Text List |
|---------------|-------------|
| List Contents | 🛓 🌆 Entries |
| | New node |

- 3. Enter the name of the field
- 4. Click outside the field to save the entry

| List Contents | Entries |
|---------------|---------|
| | |

5. Repeat this process until all list entries have been added

To create a nested list, right click on the relevant list entry and repeat the above process.

6. To move an existing entry to a new position, select the entry, then drag and drop the entry into its new location

| Style | Text List |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| List Contents | 🛓 🔚 Entries |
| | A offline work Connection A Router ✓ Hardware A Hardware A Hardware A Online |

7. When all the relevant details have been defined for the custom field, click Save.

5.3.3 Custom Fields for Incidents, Change and Service Requests

If a custom field is enabled for an Incident, Change or Service Request, additional options are displayed. These include:

| | Description |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Customer Visible | The custom field is visible in the Customer Portal, otherwise it can only be viewed via Technician access. |
| Customer Editable | Allows the Customer to edit the content within this field. |
| Default Value | The custom field will automatically be populated with the value entered here when a request is created. This value can be edited within the request screen, if required. |

| Custom Fields | |
|--------------------|---------------------------------------------------------------------------------------------------------------------------|
| Custom Field | |
| Field Label | Custom 1 (1) |
| Category | Change Request |
| Active | Yes No |
| Required | Yes No |
| Customer Visible | Yes No |
| Customer Editable | Yes No |
| Data Type | String • |
| Style | Text List |
| Unique Value | |
| Default Value | |
| Input Validation | Yes No |
| Enable Description | Yes No |
| Description | Customer field description is used to type the detailed information that is useful for both customers and users. |
| | Cancel Save |

NOTE: If Customer Visibility is set to No for a required field, then a Default Value must be defined. This will enable the Customer to save a new request without seeing the relevant field.

5.3.4 LDAP/ADS Accounts Custom Fields

The LDAP/ADS custom fields are used to define specific Customer and User fields configured within LDAP/ADS. The custom fields for Customers and Users are completed when Users and Customers are entered manually or imported using a .CSV file.

If Mixed Mode LDAP is applied, the same set of custom fields are used. These are listed with the label Mixed Mode within the Custom Field Category filter list.

5.4 Privileges

- Section 5.4.1, "Privileges," on page 412
- Section 5.4.2, "User Privileges," on page 412
- Section 5.4.3, "Customer Privileges," on page 415
- Section 5.4.4, "Requests Privileges," on page 420
- Section 5.4.5, "System Privileges," on page 424

5.4.1 Privileges

The Privileges tab contains global setup options that govern the application behavior, how Customers and Users can interact with the system and define system defaults.

Ideally, Privileges are set upon initial configuration, however, the system will adapt to changes made later.

There are four tabs within Privileges:

- User
- Customer
- Requests
- System.

5.4.2 User Privileges

Within the User tab, privileges for Users with the Technician and Partner Role can be configured by customizing the options within the Technicians options list. This also includes enabling functionality related to all User work hours and public holidays. Defaults can also be adjusted for Users across the Knowledge Management and Configuration Management processes.

Specific to Technician Users, the following privileges include the ability to:

- Create new Customers
- Create new Items
- Reassign requests
- · Edit other Technicians' requests
- Create, edit, publish and delete Knowledge Base Articles by default.

NOTE: Privileges assigned to the Technician Role are also applied to the Partner Role.

Enabling User Privileges

To configure User Privileges:

1. Select Setup>Privileges

The User tab is displayed.

| Privileges | |
|--------------------------|----------------------------|
| User Custo | omer Requests System |
| Technicians | |
| Create Customers | Yes No |
| View All Requests | Yes No |
| Add Notes to Any Request | Yes No |
| Reassign Requests | Yes No |
| Duplicate Requests | Yes No |
| Update Closed Requests | Yes No |
| Search All Items | Yes No |
| Subject Required | Yes No |
| Technician Alerts | Yes No |
| Assignment Control | Yes No |
| Edit Customer Partner | Yes No |
| Create Outage | Yes No |
| Create Quick Request | Yes No |
| Force Analysis | Yes No |
| Work Hours | |
| Define Work Hours | Yes No |
| Scheduled Vacations | Yes No |
| Vacation Reassign | Yes No |
| Login during Vacation | Yes No |
| Observe Public Holidays | Yes No |
| Configuration | |
| Supervisors | Create Edit Delete |
| Technicians | Create Edit Delete |
| Partners | Create Edit Delete |
| Finances | Create Edit Delete |
| Knowledge Supervisors | Create Edit Delete Publish |
| Technicians | Create Edit Delete Publish |
| Partners | Create Edit Delete Publish |
| Managers | Create Edit Delete Publish |
| Wanagers | |
| | Save |

User Privileges

| Technicians | |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Create Customers | Allows Technicians to create Customer Accounts. |
| Reassign Requests | Allows Technicians to reassign requests to another Technician within the same Team. When disabled, requests can only be reassigned through Escalation or changing the status of the request by the Supervisor. |
| Duplicate Requests | Allows Technicians to copy requests to fast track request creation. Supervisors have this privilege by default. |
| Manual Request Time | Disables the timer that automatically monitors and records the time when a request is in Edit Mode. |
| | NOTE: This option is not available when Contracts are enabled in the Setup>Billing tab, as time worked on a request must be added to Notes manually by Users. |
| View All Requests | Allows Technicians to view all the requests, regardless of Team assignment, logged in the system for the Processes they are assigned. |
| | It also allows Technicians to edit requests that are assigned to fellow Team members. |
| Update Closed Requests | Set to Yes to enable Technicians to add Notes to requests that are assigned a Workflow Exit State. |
| Search All Items | Within the Items tab of a request, the All Items option is displayed in the Find Item box for Technician Users, if this option is enabled. |
| Include Globals Default | By enabling this option, the "Include Global* Options" is ticked by default in the Find Item field, when a User is creating a request. |
| Subject Required | To make the completion of the Subject field mandatory for Users during the request creation process, set the option to Yes. |
| Technician Alerts | Allows Technicians to create system Alerts. |
| Work Hours | |
| Define Work Hours | Allows the Technician's availability to be configured within the Users>Schedule tab. This ensures that Requests are only forwarded to the User during the Defined Work hours, unless there are no other Users available. |
| | *If this option is enabled, the Users Work Hours must be defined for each User, otherwise the built-in technician assignment logic will be ignored and all new requests will be assigned to the Team Lead. |
| Scheduled Vacations | Allows leave to be scheduled for Users, within the Users>Schedule tab. This allows vacations to be planned and automatically detected by the System when the User commences leave. The System will not assign the User new Requests when they are on vacation. |
| Vacation Reassign | This option becomes available when the 'Schedule Vacations' option is active. When enabled, this option ensures active requests of the User commencing leave are automatically re-assigned to available Technicians within the User's Team. |

| User Privileges | |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Login during Vacation | This option becomes available when the Schedule Vacations option is active. When enabled, users can login into Service Desk and work on requests during vacation. The System will not assign the User new Requests when they are on vacation |
| Schedule by Technician | This option becomes available when the Schedule Vacations option is active. When enabled, users can login into Service Desk and work on requests during vacation. The System will not assign the User, new Requests when they are on vacation. |
| Observe Public Holidays | This option ensures the System gives consideration to public holidays when calculating SLA times, escalations and breaches. |
| | NOTE: When enabled, the Public Holidays sub-menu option is visible within the Admin>Localization>Holidays tab. |
| Assignment Control | When enabled provides the Assignment option within the User Information screen. This allows a Supervisor or Administrator to turn request assignment off for a User who is available in the system. |
| Edit Customer Partner | Allows Customers to be assigned to Partners within the Customer Information tab. |
| Create Outage | Enables a Technician to create outages for Items. |
| Force Analysis | The system will propose relevant Solutions within the Analysis tab, during the request creation process. |
| Configuration | |
| Roles | Set the default privileges for the User Roles' ability to create, edit and delete Item information in the CMDB. |
| | If you change the default privileges, for an existing user the privileges will not be updated. Since, these settings are not system level settings. But when you create a user the default privileges are assigned. |
| | Individual settings below user information section will determine the actual privileges for that user. If you want to change these settings for many users, use the Bulk edit feature. |
| Knowledge | |
| Roles | Configure the default Knowledge Base authoring permissions for each User Role. |

- 2. Click Yes to enable, or No to disable a Privilege option
- 3. Click Save.

5.4.3 Customer Privileges

Customer Privileges specify the options that are available to Customers within the Customer Portal.

Enabling Customer Privileges

To enable Customer Privileges:

1. Select Setup >Privileges >Customer

The Privileges screen is displayed.

| Privileges | |
|--------------------------|-----------------------|
| User Custo | omer Requests System |
| Customers | |
| Create Account | Yes No |
| Default Web Access | Yes No |
| Generic Request | Yes No |
| Generic Request Type | Incidents |
| Incidents | Create And Edit |
| Change Requests | Off 🗨 |
| Service Requests | Create And Edit |
| Service Incidents | Yes No |
| Default Request | Generic Request |
| Items | View |
| Show Only Active Items | Yes No |
| Show Subject Field | Yes No |
| Show Status Field | Yes No |
| Show Notify Field | Yes No |
| Subject Required | Yes No |
| Show Priority | Priority Urgency Off |
| Item ID Search | Yes No |
| Force Search | Yes No |
| Create Forum Topics | Yes No |
| Display Room | Yes No |
| View Technician | Yes No |
| Show Services | Yes No |
| Show All Services | Yes No |
| Show Service Targets | Yes No |
| Enable RSS | Yes No |
| Enable Titles | Yes No |
| Enable Item Shadow | Yes No |
| Customer Defined Contact | Yes No |
| Record GPS | Yes No |
| Default Date Style | mm/dd/yy |
| Default Timezone | (GMT +5:30) New Delhi |

| Customer Privileges | Description |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Create Account | Allows Customers to create their own account from the Login screen. |
| Default Web Access | Define the default setting for Web Access on newly created Customer Accounts. |
| Generic Requests | Define if Customers can view, create or edit Generic Requests in the Customer Portal. |
| Generic Request Type | This option becomes visible when Generic Requests option is active. Define the type for generic request from Incident, Service Request or Change Request. For example, if your generic request type is set to Incidents, when you create a generic request, the request gets listed as incident in the User portal. Then the technician can include item details. |
| Incidents | Define if Customers can view, create or edit Incidents in the Customer Portal. |
| Change Requests | Define if Customers can view, create or edit Change Requests in the Customer Portal. |
| Service Requests | Define if Customers can view, create or edit Service Requests in the Customer Portal. |
| Service Incidents | If the option to create Incidents in the Customer Portal is enabled, this can be refined by defining if Incidents can be logged against Service Items. If this option is disabled then Services are not displayed in the Category drop-down list during the Incident creation process. |
| | Also, if a Customer attempts to log an Incident against a Service via email by including the Item# in the Subject line, and this option is disabled, the system will send an error message. The "NoServiceIncidentContent" error message can be customized in the Admin>Setup>Email>Templates>Error Message filter. |
| Default Request Type | Define the default request type from Generic Request, Incident, Service Request, Change Request or Quick Call. The list shows if the options are enabled. For example, if Service Request option is turned off, then Service request option is not shown as an option. |
| Items | Define if Customers can view, create or edit their own Item details within the Customer Portal. |
| Show Only Active Items | Allows Customers to only view Items that are marked as Active in the system. |
| Show Subject Field | Displays the Subject field above the Description field in the Customer Portal. |
| Show Status Field | Allows to hide or display the Item status in the Customer Portal. |
| Show Priority | Enables Customers to view and set the Priority of their requests. Alternatively, the Urgency can be shown, which will be associated with the Item Criticality to set the Priority. Select "Off" to disable this functionality completely. |
| Item ID search | Allows Customers to search by an Item's ID when creating a new request. |
| Force Search | When enabled, proposes solutions for Incidents based on the Item Type, Classification and Description provided. |
| Create Forum Topics | Allows Customers to create a new Forum topic through the Customer Portal. |
| Display Room | Displays the Room for an Item when creating a request. |

| Customer Privileges | Description |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| View Technician | Yes allows Customers to view the details of Technician assigned to their request in the Customer Portal. |
| Show All Services | Enables the Service Catalog link in the Services tab of the Customer Portal. This allows Customers to view and log requests against all Services offered by the support organization (i.e., request access to a service). Services listed here are not assigned an Exit Item Lifecycle State. |
| Show Service Targets | Displays the Response, Restoration and Resolution targets for the SLA assigned to the request in the Customer Portal. |
| Enable RSS | When enabled, provides the RSS Requests Menu option in the Customer Portal. |
| Enable Titles | When enabled, displays the Titles Tab within the Setup, which can be customized. This list is then displayed in the Title field in the User and Customer Information screen. See Titles. |
| Enable Item Shadow | When enabled, if requests are logged against an Item on the Customer Portal, Technicians can amend the Item assigned to the request without the Customer seeing the change. |
| Customer Defined Contact | When enabled, this option allows the Customer to define their preferred method of contact in their Profile or My Account screen. Their preference applies when a Team has the Customer Notification option set to Customer Defined. |
| Record GPS | When enabled, the Customer's GPS location when they last logged into the Customer Portal, is recorded within their Customer Information screen. |
| Default Date Style | Sets the default Date format to be used across the application. |
| Default Timezone | Sets the default time zone across the application. This can be overridden on a per User basis, by a User who sets their time zone for their log in account |
| LDAP/AD | (Visible when an LDAP/AD connection is configured.) |
| Include Customers | Set to Yes if the system is to import Customer details when synched with an LDAP/AD server. |
| Mixed Mode | Allows Customer accounts to be created directly through the system, as well as being imported via LDAP/AD. |
| View Shared | (Request visibility options for the Customer Portal.) |
| Requests | |
| By Ownership | Allows requests to be viewed by all Owners of the Item, when logged against a Shared or Global Item. |
| | (See the table below for toggle option outcomes.) |
| By Org Unit | (This option is visible when the By Ownership is enabled.) |
| | Allows requests to be viewed by all Customers of an Org Unit assigned to the Item, when logged against a Shared or Global Item. |

2. Click Yes to enable, or No to disable a Privilege option

3. Click Save.

Setting the View Shared Requests options

When setting the visibility of requests logged against shared Items, refer to the table below to ensure the correct visibility option is configured for your organizational requirements:

| By Ownership | By Org Unit | Shared Request Visibility |
|--------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| No | | Only visible to the Customer who logged the request. |
| Limited | No | Visible to the Customer who logged the request and other Owners in the same Org Unit, assigned to the Item. |
| Limited | Limited | Visible to Customer who logged the request and members of Org Unit they belong to, if the Org Unit is also assigned to the Item. |
| Limited | Yes | Requests visible to Owners within all Org Units assigned to the Item. |
| Yes | No | Visible to Customer who logged the request and other assigned Owners. |
| Yes | Limited | Visible to Customer who logged the request, other members of the Org Unit the Customer logging the request belongs to and other Owners assigned to the Item. |
| Yes | Yes | Visible to everyone who share the Item assigned to the request. |

5.4.4 Requests Privileges

Requests Privileges allows the Administrator to control the functionality available for requests and set default requirements. These privileges are applied system-wide.

Enabling Requests Privileges

To enable Requests Privileges:

1. Select Setup>Privileges>Requests

The Requests Screen appears.

| rivileges | |
|-----------------------------|------------------------|
| User Custo | omer Requests System |
| Requests | |
| Enable Escalation Control | Yes No |
| Queues | On Off |
| Control Deployments via RFC | On Off |
| Control CMS via RFC | Yes No |
| Customer CMS via RFC | Yes No |
| Minimum Solution Relevance | 50 % |
| Enable Quick Calls | Yes No |
| Request Priority | Derived Selected |
| Handshaking | Yes No |
| Handshaking Close Action | 2 Days |
| Approval Reminder | Yes No |
| Default Notes Visibility | Public Private |
| Allow Unknown | Yes No |
| Archive Requests | Yes No |
| Default SLA | Warranty |
| Default Incident Team | Device-Incident Team |
| Default Problem Team | Problem Analysis Team |
| Default Change Team | Change Management Team |
| Default Request Team | Service Request Team |
| Review Options | |
| Review SLA | Yes No |
| Review RFC | Yes No |
| KBA Options | |
| Control KBA via Request | Yes No |
| | Save |

Request Options

Enable Escalation Control Enables escalation to be enabled or disabled on a per request basis. This option is only available to Supervisor Users.

Request Options

| Queues | Allows Teams to use a holding bay for requests that are received via email or the Customer Portal. The Queues can be enabled within the Team Information screen, on a per Team basis. |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Control Deployments via RFC | When enabled, Change Requests are automatically created from newly entered Deployments, and will require approval before work commences on the Deployment. |
| Control CMS via RFC | When enabled, changes made within the CMDB by a Technician will generate a Change Request requiring approval before the change is implemented. |
| Customer CMS via RFC | When enabled, Customers creating Items via the Customer Portal generate a Change Request that requires approval before the change is implemented in the CMDB. |
| Minimum Solution Relevance | Define the minimum degree of relevancy for content included in the Description field of a request, when the system automatically searches the Knowledge Base to propose solutions. |
| Enable Quick Calls | Enables the functionality that allows the Supervisor to profile Requests using Quick Call Templates. These can be used by other system Users when creating new requests. |
| Request Priority (Derived/Selected) | Enable Derived to allow the system to derive the Priority based on Urgency and Impact of the request . Enable 'Selected' to manually apply the Priority from a list of options. |
| Default Priority | **This option is displayed when the Incident Priority is set to Selected. The selection made from the drop-down menu, is automatically applied as the default Priority for newly created requests. |
| Handshaking | Enables notifications to be sent to a Customer using the Propose button within an Incident or Request, stating the Incident/Request will be closed if no reply is received from them within a set number of days. |
| | NOTE: Note: The Solution button within an open Incident/Request is not accessible when the Handshaking facility is enabled. |
| | When enabled, if Problems or Changes are closed, any related Incidents or Requests are moved to the Pending - Approval State not to the default Closed State. |

Request Options

| Handshaking Close Action | Sets the system default number of days to lapse before an Incident or Request will close if the Customer does not respond to the handshake email notification. This can be adjusted on a per Org Unit basis. |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | NOTE: Note: To allow Customers to re-open an Incident or Request using the link in the handshake email, the web server must be using Port 80. |
| Approval Reminder | To automatically send Managers reminder emails regarding Requests requiring their approval, set this option to Yes. When Yes is selected, define the number of days to lapse before a reminder will be sent. |
| | The content of the reminder email is drawn from the ApproveChange or ApproveServiceRequest template. These are configured within Setup>Email>Templates tab. |
| Default Notes Visibility | Sets the system default visibility of Notes, when added to requests. If it is expected that the majority of Notes are to be emailed to Customers, select Public. |
| Allow Unknown | When set to No and a User opens a request that is assigned the Unknown Service Item, the User will be prompted to update the Item before saving the request. |
| Archive Requests | When enabled, the number of days a request is closed before being removed from the List View and archived is to be set. |
| | Requests that are archived have attachments removed and they are no longer included in the full text index for searching. They are still accessible for reporting purposes and attribute based searches. |
| Default SLA | Is used as the Default SLA when a new request is created without an SLA defined for the Item, Customer or Org Unit. |
| Default Incident* Team (required if using AMIE) | Set the Default Incident Team, which is used for AMIE integration and also set as a default Support Team for Item Types. |
| Default Problem* Team (required if using AMIE) | Set the Default Problem Team, which is used for AMIE integration and also set as a default Support Team for Item Types. |
| Default Change* Team (required if using AMIE) | Set the Default Change Team, which is used for AMIE integration and also set as a default Support Team for Item Types. |
| Default Request Team* (required if using AMIE) | Set the Default Request Team, which is used for AMIE integration and also set as a default Support Team for Item Types. |
| Review Options | |

| Request Options | |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Review SLA | When enabled will display the Review date field in the Service Level Information screen. The default number of days between reviewing SLAs should be set and the number of days before the review date for an Alert Reminder, should also be entered. |
| Review RFC | When enabled the system will display a Review date in the RFC Information tab. The default number of days between reviewing RFCs should be set and the number of days before the review date for an Alert Reminder, should also be entered. |
| KBA Options | |
| Control KBA via Request | When enabled, a Request is generated when the KBA is created, deleted or amended and can only be published to the KB by a User with publishing privileges. |
| Request Type | Specify the type of request to be generated when new or amended KB content is moved to a "Pending Publication" state. |
| | (The options are based on the ownership of Change and Service Request licenses.) |
| Default SLA | Set the default SLA to be used for when requests are logged regarding updates in the knowledge base. Applying an SLA here, determines which workflow and team will receive the requests for approval, as with any other request logged in the system. |

* To be set after Teams have been configured.

- 1. Click Yes to enable, or No to disable a Privilege option
- 2. Click Save.

5.4.5 System Privileges

The System Privileges screen allows an Administrator to control the following options:

- Knowledge Base
- Surveys
- Forums
- Chat
- Outages
- Other general settings.

Enable System Privileges

To enable System Privileges:

1. Select Setup>Privileges>System

Privileges User Requests System **General Settings** Host Address Edit Item Numbers Yes No Public Knowledge Base Yes No Public Surveys Yes No Public Alerts Yes No Public Requests Yes No Random Email Manual Passwords Password Questions Yes (minutes) Session Timeout 30 Terminate Active Session Yes No -Default Name Pattern [First name] [Last name] Outbound Web Services On Off OpenID Provider On Off OpenID Consumer On Off Telemetry Mandatory Product Data Gather Configuration Data Yes Gather Feature Usage Data Yes ZENworks Integration Options Enable ZENworks Integration Yes No Enable ZENworks Remote Control No Forum Options Use Forums Yes No Default Sort Order Ascending Descending Public Forums Yes No Chat Options Enable Chat Yes **Outages Options** Planned Outages Page Yes Outages Page Yes Minimum Criticality Moderate • Show Affected Relationships Yes Show Affected Users Yes Show Inactive Items Yes Show Change Requests Yes Search Outages Yes **KBA Review Options** Review KBA Yes No Re-index Save

2. The following information is displayed:

The System Privileges tab is

| Customer Privileges | Description |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Host Address | To be completed with details of the machine hosting the application, if required. |
| Edit Item Numbers | Allows users to edit the identification number of an Item. |
| Public Knowledge Base | Allows access to the Public Knowledge Base on the Login Page. |
| Public Surveys | Provides access to Public Surveys on the Login Page. |
| Public Alerts | Alerts with the visibility defined as "Everyone" will be made available on the Login Page. |
| Passwords | When LDAP or Active Directory Authorization is not used internal authentication is used. To define the password type to be used by the system select: |
| | <i>Random</i> : the system will generate a random string whenever a password is reset. |
| | <i>Email</i> : The Users Email Address will be used as the password. |
| | Manual: Allows the User to manually create a password. |
| Password Questions | Enables the ability to set security questions within the My Account screen for Customers and Users, which are referenced when resetting or re-sending login credentials. |
| Session Timeout | The number of minutes the system waits before terminating idle sessions. |
| | NOTE: Ensure that the session timeout on the server hosting the application, is equal to or greater than the Timeout option defined in the System Privileges. For changing the timeout option on the server that is hosting the application, edit as follows |
| | For a standalone application: Edit the / <mfsd_server_installation_path>/</mfsd_server_installation_path> Server/webapps/LiveTime/WEb-INF/ web.xml file. |
| | For an appliance: Edit the srv/ tomcat6/webapps/LiveTime/WEB-INF/ web.xml file. |
| Terminate Active Session | When enabled, if a User attempts to log into the system when they already have an active session, they will be prompted to end the active session to allow for the new login. |
| Default Name Pattern | Select the order for names being displayed in the system, when the First and Last Name are shown together on a screen. |

| Customer Privileges | Description |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Outbound Web Services | When enabled, request Workflow States and Item Lifecycle States can be assigned a 'listener', which allows these details to be updated in external systems. (Refer to the Extend section of the LiveTime website for details on how to develop a listener.) |
| OpenID Provider | Enables the system to function as an OpenID Provider for User authentication across network resources, as the user authentication source. |
| | The OpenIDProvider URL should be: |
| | <protocol>://<server>/LiveTime/ WebObjects/LiveTime.woa/</server></protocol> |
| | wa/providerLookup |
| | The Protocol should be set to http or https and the server details should include where the system is hosted. |
| OpenID Consumer | Enables the system to delegate authentication of Users and/or Customers to one or more OpenID Providers (i.e., Google, Yahoo). OpenID Providers that are to be used as delegates are configured in the Setup>Authentication>Social tab. |
| Telemetry | Telemetry enables ZENworks to collect statistical data about your usage of Service Desk. This data will enable us to ensure that you have the best possible experience with Service Desk. |
| | Telemetry is scheduled to run once a month. |
| | If your Service Desk server does not have outward connectivity and you want to upload the data manually, then perform the following: |
| | Copy the telemetry enc file from the following location: |
| | Windows: \Program Files\ServiceDesk\LiveTime\Telem etry |
| | Linux: /usr/local/ServiceDesk/ LiveTime/Telemetry |
| | Appliance: /LiveTime/Telemetry |
| | Using any FTP client connect to productfeedback.microfocus.com with username: anonymous and password: blank (optionally use your email-id). |
| | 3. Upload the file to the stats/MFSDTelemetry folder. |

| Customer Privileges | Description |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Mandatory Product Data | Telemetry collects the following mandatory product data: |
| | License type |
| | Technician count |
| | Customer count |
| | ZENworks integration |
| | Database type |
| | Operating system |
| Gather Configuration Data | (Optional) This collects the list of categories and count. |
| Gather Feature Usage Data | (Optional) This collects the following feature usage data: |
| | Quick call count |
| | Request info and count |
| | Process info and count |
| Forum Options | |
| Use Forums | This option enables and disables all Forums within the system. |
| Default Sort Order | Sets the default Forum Topic sort order to either ascending or descending. |
| Public Forums | This option enables Public Forums to be viewed from the login page and does not require an account to view. |
| Chat Options | |
| Enable Chat | Select 'Yes' to activate Chat facility within the application. |
| Chat Request Assignment | Set to Technician if Customers are to be restricted to chatting only with the Technician assigned to their Request. Set to 'Team' to allow Customers to chat with any member of the Team assigned to their request. |
| Default Technician Availability | Sets the default availability for chat status in newly created Technician Account information screens. |
| Outages Options | |
| Planned Outages Page | A link to the Planned Outages page is displayed on the Login Screen. Outages can be set within Configuration Item properties to schedule when the item will be off-line. |
| Outages Page | A link to the Outages Page is displayed on the Login Screen. |
| Minimum Criticality | Defines the Minimum Criticality required for Items to be displayed on the Outages pages. |

| Customer Privileges | Description |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Show Affected Relationships | Enables Item from the Outages page to show the Item's Relationships. |
| Show Affected Users | Allows Item owner's details to be displayed on the Outages page. |
| Show Inactive Items | Displays inactive Items on the Outages page. |
| | An inactive Item is an Item that is currently not in use by the organization. |
| Show Change Requests | Allows Customers to view Change Requests related to Outages displayed in the Customer Portal. |
| Search Outages | Enables Outages to be searched using the Customer email addresses or Item number. |
| KBA Review Options | |
| Review KBA | When enabled a Review date field is displayed in the KBA Information screen. The default number of days between reviewing KBAs should be set and the number of days before the review date for an Alert Reminder, should also be entered. |

4. Click Yes to enable, or No to disable a Privilege option

5. Click Save.

NOTE: Note: All Outages options apply to Service Manager only.

Re-Index Button

Re-index

The Re-Index button at the base of the System Privileges page is used to re-build the system index. If the search engine appears to be failing text searches, this process will re-create the index. The indexing rebuild runs as a background process.

The following content and attachments is re-indexed:

- Knowledge Base
- Forums
- All requests
- Items.

5.5 Customize

- Section 5.5.1, "Customize," on page 430
- Section 5.5.2, "Portals," on page 433
- Section 5.5.3, "Cascading Style Sheets (CSS)," on page 436

5.5.1 Customize

The *Customize* menu allows the Administrator to brand the application where system banners can be replaced with the appropriate organizational banners. Graphics included should be PNG images. The Application Banner should be 250×60 pixels and all other banners should be 500×60 pixels.

Adding a Customized Banner

To add a customized banner:

1. Select Setup>Customize

| Banner Type | Displayed |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Application | Visible on the Log in page of the system. |
| User | Visible in the portals for Supervisor, Technician, Administrator, Partner, Finance and Manager Users |
| Public/Email | Displayed on public portals for Knowledge, Outages, Surveys and Forums. This banner is also included in emails when the Setup>Email>Setup option of Include Banner is set to Yes. |
| Customer | Visible in the Customer Portal. |
| | NOTE: Banners for Partner Organizations can be uploaded in the Banners tab of the User>Partner Organization screen. This will override the system Customer Portal banner for Customers associated with the Partner Organization. |

2. To use *Custom Banners*, select the *Use Custom* checkbox at the top of the Customize *Banners screen*.

3. To upload a new banner, click New

A window with a browse function appears.

- Browse to the location of the image and click _____
 The image will be uploaded.
- 5. Repeat the process until all banners have been replaced
- 6. Click Save.

NOTE: When the Purchase Orders functionality is enabled within the Setup>Billing tab, the option to upload a logo that will be used for system generated POs is displayed. The graphic should be saved as 150x150 PNG file.

Portals Tab

All Public Access home page messages can be fully customized under the Portals tab. Links to documents and downloads may be added. The home page messages can be customized for:

- Alerts
- Forums
- Knowledge Base
- Login Page
- Public Outages
- Planned Outages
- Surveys
- Customer Portal welcome message.

NOTE: Outage Home and Planned Home Messages apply in Service Manager only.

To customize a Public Access message:

- 1. Select Setup > Customize
- 2. Click the Portals tab

| Banners | Portals CSS |
|----------------|----------------------------------------------------------------------------------|
| Name | <u>≜</u> Title |
| AlertHome | Public alerts page. |
| AllServices | Displayed when the Customer selects Service Catalog page under Services Tab . |
| CustomerForums | Displayed when the Customer Selects Forums Tab. |
| ForumsHome | Public forums page. |
| Items | Displayed when the Customer Selects Items Tab. |
| KnowledgeHome | Public knowledge page. |
| Login | Displayed on the main login page. |
| Logout | Displayed when the user logs out. |
| OutagesHome | Public outages page. |
| PlannedHome | Public planned outages page. |
| Requests | Displayed when the Customer Selects Requests Tab. |
| SelfHelp | Displayed when the Customer Selects Self Help Tab. |
| Services | Displayed when the Customer Selects Services Tab. |
| Sspr | Displayed on the main login page. |
| SurveyHome | Online surveys page. |
| Welcome | Displayed when the Customer has logged in. |
| | |

3. Select the Name hyperlink The HTML editor appears.

| n active user community from around wers to questions from other users. |
|----------------------------------------------------------------------------|
| |
| |
| |
| |
| |
| |
| |
| |
| Words:33 |
| |
| |
| |

- 4. Edit the message as required
- 5. Click Save.

Cascading Style Sheets

The system can be further customized using cascading style sheets (CSSs) to amend:

- Color
- Fonts
- Tabs
- Graphics.

See: Cascading Style Sheets (CSS).

5.5.2 Portals

All Public Access home page messages and some Customer Portal pages can be customized within the Portals tab.

Knowledge of HTML is required to edit this section. Links to documents and downloads may be added. The content can be customized for the following system Portals: 1.

| Name | Description |
|-----------|------------------------------------------------------------------|
| AlertHome | Accessed by clicking the Alerts link on the system Login screen. |

| Name | Description |
|----------------|-----------------------------------------------------------------------------------------------------------|
| AllServices | Visible as the header within the Service Catalog screen of the Services tab in the Customer Portal. |
| CustomerForums | Visible as the header within the Forums page of the Customer Portal. |
| ForumsHome | Visible as the header within the Forums pages of Public Forums. |
| Items | Visible in the Items tab within the Customer Portal. |
| KnowledgeHome | Accessed by clicking the Knowledge Base link on the system Login screen. |
| Login | Visible on the screen where system users enter their login credentials. |
| Logout | Visible on the page displayed when system users log out. |
| OutagesHome | Accessed by clicking the Outage link on the system Login screen of Service Manager installations. |
| PlannedHome | Accessed by clicking the Planned Outage link on the system Login screen of Service Manager installations. |
| Requests | Visible in the Requests tab within the Customer Portal. |
| SelfHelp | Visible in the Self Help tab within the Customer Portal. |
| Services | Visible as the header within the Services tab of the Customer Portal. |
| SurveyHome | Displayed in the public online surveys page. |
| Welcome | Displayed on the landing page when the Customer logs into the Customer Portal. |

To customize a Portal message:

1. Select Setup > Customize

| Banners | Portals CSS |
|----------------|----------------------------------------------------------------------------------|
| Name | <u>≜</u> Title |
| AlertHome | Public alerts page. |
| AllServices | Displayed when the Customer selects Service Catalog page under Services Tab . |
| CustomerForums | Displayed when the Customer Selects Forums Tab. |
| ForumsHome | Public forums page. |
| Items | Displayed when the Customer Selects Items Tab. |
| KnowledgeHome | Public knowledge page. |
| Login | Displayed on the main login page. |
| Logout | Displayed when the user logs out. |
| OutagesHome | Public outages page. |
| PlannedHome | Public planned outages page. |
| Requests | Displayed when the Customer Selects Requests Tab. |
| SelfHelp | Displayed when the Customer Selects Self Help Tab. |
| Services | Displayed when the Customer Selects Services Tab. |
| Sspr | Displayed on the main login page. |
| SurveyHome | Online surveys page. |
| Welcome | Displayed when the Customer has logged in. |

2. Select the Name hyperlink The HTML editor appears.

| Format | - Font Family | y - Font | Size 🝷 | са 🐇 нтп | L) | |
|----------------------|---------------|----------------|--------|---------------------------------------------|----|--|
| <u>А</u> -В <i>I</i> | U ABC | = <u> </u> = " | | X ₂ X ² | | |
| | | | | | | |

- 3. Edit the message as required
- 4. Click Save.

Cascading Style Sheets

The system can be further customized using cascading style sheets (CSSs) to amend:

- Color
- Fonts
- Tabs
- Graphics.

5.5.3 Cascading Style Sheets (CSS)

- "Background Colors" on page 437
- "Application Banners" on page 438

The CSS tab allows Users to customize the look and feel of banner backgrounds and tabs within the system. Knowledge of working with cascading style sheets is recommended when making changes to these settings.

The options available for configuration include:

Background Colors

| CSS Editor | |
|-------------------------------------------|------------------------------------------------------------------|
| Background Colors | |
| #header | This controls the background color of the header. |
| #menubar, .greyWindow150 | This controls the background color of the menu bar. |
| #submenu, .subMenu | This controls the background color of the submenu bar. |
| #menu li a, .newrequest | This controls the color of the menu background and the text. |
| #menu a.active, .activeLink | This controls the background color of the active selective menu. |
| #menu li a:hover, .greyWindow150 li:hover | This controls the background color of menu on hover |

Example 1

This example shows how to change the default header color to green. In the #header section for background, you can either directly specify green or use the Hex color code for green. After saving the changes, you can see a change in the background color of all portals as shown below:

| Banners | Portais | CS | 1 | | | |
|-----------------------------------|--------------|----------|-------------|-------------|------------|---|
| /* Edit this | | | lor combina | ations acro | ss all the | ^ |
| <pre>/* Background theader{</pre> | color of the | Header : | default col | lor is blac | k*/ | |
| ackground: g | reen: | | | | | |

Example 2

The following screen displays the customized colors of the header, menu bar, submenu bar; the active menu and the configurations made to get this result:

| Banners Portals CSS | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| <pre>/* Edit this CSS to customize the color combinations across all : cortals (User, Customer, Admin) */ /* Background color of the Header : default color is black*/ header(background: #006633; / /* Background color of the Menu bar */ fmenubar, .greyWindow150 { background: Lightblue; } /* Background color of the Sub menu bar */ fsubmenu, .subMenu { background: #CC66FF; } </pre> | the |
| <pre>/* Background color and text color of Menus, Default:# Black back with white text) */ #menu li a, .newrequest { background: #535557; /* In case you had customized the images for Menu, in earlier ve: of NSD, then comment the above line and uncomment the below one*, /* Background:url(/images/nui-header-tab.pnc) Opx Opx; */ /* Text color of Menu, default white*/ color:#ffffff;</pre> | rsions |
| /* Background color of active/Selected Menu , Default color: Tea #menu a.active, .activeLink(background: #FF0000; /* In case you had customized the images for Menu, in earlier ver of NSD, then comment the above line and uncomment the below one*, /* Background:url(/images/nui-header-tab_active.png) 0px 0px;*, | rsion. |
| /* Background color and text color of Menu on hover Default: Grey background & black text */ fmenu li a:hover, .greyWindow150 li:hover{ background: #888988; /* In case you had customized the images for Menu, in earlier ver of NSD, then comment the above line and uncomment the below one*, /* Background:url(/images/nui-header-tab-nov.png) Opx Opx; */ /* Table to the text of NSD. | rsions |
| Default | Save |

NOTE: After saving the changes, ensure that you clear the browser cache to view your custom changes.

Application Banners

CSS Editor

Application Banners

div.login-panel div.login-header div.login-title-custom

This controls the style of the customized banner on the Login page.

CSS Editor

| div.login-panel div.login-header div.login-title-container | This controls the style of the default banner on the Login page. |
|------------------------------------------------------------|---------------------------------------------------------------------------------------------------|
| div.login-panel div.login-header span.login-app-logo | This controls the helpdesk icon graphic on the Login page. |
| #header .customPngBanner | This controls the style of the customized banner within the User portal. |
| #header .defaultBanner | This controls the style of the default banner graphic within the User portal. |
| #header .customPngBanner | This controls the style of the customized banner within the Customer & Public portals. |
| #pageHeader .defaultBanner | This controls the style of the default banner within the Customer & Public portals. |
| Menu Options (User Portal) | |
| #menu a.active | This controls the highlight on the active (main) menu selection. |
| submenu a:hover | This (in tandem with the span extension) controls the mouseover (hover) on the submenu tabs. |
| #submenu a:hover span | This (in tandem with the hover default above) controls the mouseover (hover) on the submenu tabs. |
| #submenu a.active | This controls the highlight applied to the selected submenu options. |

If unwanted changes are made to the system Style Sheets, use the Default button to return the system to the out-of-the-box format.

5.6 Localization

- Section 5.6.1, "Regions," on page 440
- Section 5.6.2, "Hours," on page 442
- Section 5.6.3, "Content," on page 443
- Section 5.6.4, "Item Type Request Fields," on page 448
- Section 5.6.5, "Priority," on page 453
- Section 5.6.6, "Email Signatures," on page 454
- Section 5.6.7, "Titles," on page 456

5.6.1 Regions

This option allows the Administrator to customize the geographic regions or States that are available for each Country. This information is applied to Customers and Org Units when their contact details are being defined. When the Customer or Org Unit "Country" field is completed within the information screen, the States that are displayed are drawn from the Geographic Regions defined here.

To define a State for a Country:

- 1. Go to Setup > Localization > Regions tab
- 2. Search and select a Country hyperlink from the list provided

| R | egions | Hours | Cor | itent | Holic | lays | | Titles |
|----------------------|-------------------------------------------|------------|-------------------------------------|----------|-------|------|--|--------|
| Details | | | | | | | | |
| Name | Australia | | | | | | | |
| Continent | Asia Pacific | | | | | | | |
| Default Time Zone | (GMT +10:00) Melbourne, Sydney, Canberra, | | | | | | | |
| States | 0 | | | | | | | |
| | Name | 🛓 Time i | Zone | I | | | | |
| | Australian Capital Territory | | -10:00) Melbour rra, Port Morest | | | | | |
| | New South Wales | | 10:00) Melbour rra, Port Morest | | | | | |
| | Northern Territory | (GMT + | 9:30) Adelaide | , Darwin | | | | |
| | Queensland | (GMT + | 10:00) Brisban | e | | | | |
| | South Australia | (GMT + | 9:30) Adelaide | , Darwin | | | | |
| | Tasmania | | 10:00) Melbour rra, Port Morest | | | | | |
| | Victoria | | -10:00) Melbour rra, Port Morest | | | | | |
| | Western Australia | | -8:00) Beijing, P ore, Taipei | erth, | | | | |
| | | 1 - 8 of 8 | Results | | | | | |

3. Click 💽 to add another State or region

| Localization | |
|--------------|-------------------------------------------|
| Region | s Hours Content Holidays Titles |
| Details | |
| Name | |
| Initials | |
| Time Zone | (GMT +10:00) Melbourne, Sydney, Canberra, |
| | Cancel Save |

- 4. Enter the Name, representative Initials and select the relevant Time Zone
- 5. Click Save
- 6. Repeat Steps 3 to 5 to add more regions
- 7. Select Save.

Editing States

A default or customized template can be easily edited:

- 1. Go to Setup > Localization > Regions tab
- 2. Search and select a Country hyperlink from the list provided
- 3. Select the relevant State Name hyperlink.

| Localization | |
|--------------|---------------------------------|
| Region | s Hours Content Holidays Titles |
| Details | |
| Name | Queensland |
| Initials | QLD |
| Time Zone | (GMT +10:00) Brisbane |
| | Cancel Delete Save |

- 4. Edit the Name, Initials or Time Zone details
- 5. Select Save.

Deleting a State

A default or customized template can be easily deleted:

- 1. Go to Setup > Localization > Regions tab
- 2. Search and select a Country hyperlink from the list provided
- 3. Select the relevant State Name hyperlink

- 4. Select the Delete button
- 5. Select Save.

Region Search

To find a Country or State within a Country, the Search facility can be used. To conduct a search:

- 1. Go to Setup > Localization > Regions tab
- 2. Select Search

| Localization | | | | | | |
|--------------|--------|--------|---------|----------|---|------|
| Region | 5 | Hours | Content | Holidays | Т | tles |
| Search | | | | | | |
| Country Name | | | | | | |
| Continent | Africa | • | | | | |
| State | | | | | | |
| | | Cancel | Clear | Search | | |

3. Enter the known details

Search options include Country Name, Continent or can also be refined by the State within a Country.

4. Click Search.

5.6.2 Hours

For the ease of configuring the Technician Scheduled hours of work and customizing hours of operation for Service Level Agreements, work hour templates can be created within the Setup>Localization>Hours screen. These templates are then made available throughout the application, wherever hours of operation are defined.

| Localization | | | | | | | |
|-----------------|--------|---------------|-------------------|---------------|---------------|---------------|----------|
| Regions | Hours | Content | Holidays | Title | :5 | | |
| New | | | | | | | |
| Template Name | Sunday | Monday | Tuesday | Wednesday | Thursday | Friday | Saturday |
| Weekdays 8 to 5 | N/A | 08:00 - 17:00 | 08:00 - 17:00 | 08:00 - 17:00 | 08:00 - 17:00 | 08:00 - 17:00 | N/A |
| Weekdays 9 to 5 | N/A | 09:00 - 17:00 | 09:00 - 17:00 | 09:00 - 17:00 | 09:00 - 17:00 | 09:00 - 17:00 | N/A |
| | | | 1 - 2 of 2 Result | s | | | |

To create a template:

- 1. Go to Setup>Localization>Work Hours tab
- 2. Click New
- 3. Enter the Template Name (Required.)
- 4. Set the hours of operation

| Localization | |
|---------------|-------------------------------|
| Regions | Hours Content Holidays Titles |
| Details | |
| Template Name | Weekdays 7 to 5 |
| Schedule | |
| Sunday | ▼ - |
| Monday | 07:00 💌 - 17:00 💌 |
| Tuesday | 07:00 🔻 - 17:00 💌 |
| Wednesday | 07:00 🔻 - 17:00 💌 |
| Thursday | 07:00 💌 - 17:00 💌 |
| Friday | 07:00 🔻 - 17:00 💌 |
| Saturday | ▼ |
| | Cancel Save |

5. Select Save.

Editing a Template

A default or customized template can be easily edited:

- 1. Go to Setup>Localization>Work Hours tab
- 2. Click the relevant Template Name hyperlink
- 3. Amend the hours, as required
- 4. Select Save.

Deleting a Template

A default or customized template is deleted from the List View:

- 1. Go to Setup>Localization>Work Hours tab
- 2. Click the Template Name hyperlink
- 3. Select Delete

A warning message will be displayed.

4. Click OK.

5.6.3 Content

The Content tab allows Users to configure automated messages, user interface and system objects content for language files used by the application.

| Localization | | | |
|------------------|-----------|--------------------------|-----------------|
| Regions | Hours | Content Holidays | 5 Titles |
| Locale | Language | ■ Country | E Character Set |
| Chinese | Chinese | | UTF-8 |
| Chinese (China) | Chinese | China | UTF-8 |
| Chinese (Taiwan) | Chinese | Taiwan | UTF-8 |
| Dutch | Dutch | | UTF-8 |
| English | English | | UTF-8 |
| rench | French | | UTF-8 |
| Serman | German | | UTF-8 |
| lungarian | Hungarian | | UTF-8 |
| talian | Italian | | UTF-8 |
| Norwegian | Norwegian | | UTF-8 |
| | | 1 - 10 of 18 Results 🚽 🔿 | |

The customized content is applied to Customers and Users by setting the Email Locale option in their account information screen.

Content can be customized across the following elements and messages:

- Email Keywords
- Emal Message Templates
- Email Summary Tables
- Error Message Templates
- General Custom Fields
- Item Type Request Fields
- SMS Message Templates
- System Objects
- User Interface messages
- Email Signatures.

NOTE: It is recommended that the localization of user interface content, email and sms messages be done after they have been configured and reviewed within the Setup>Email and Setup>Customize tabs, respectively.

To customize content:

- 1. Select Setup>Localization
- 2. Move to the Content tab
- 3. Select the Locale link for the language file that is to be edited
- 4. Within the Category field, select the element to be customized

| Localization | |

8. Click Save.

Repeat the above process for all the relevant elements in the default list or select the Content tab to return to the Locale list.

5.6.4 Item Type Request Fields

Within the system, service organizations can refine custom fields made available during the request creation process based on the Item assigned to the request. In the Fields tab a User can create custom fields that apply to the Item Type. Therefore, when a request is logged against an Item that uses an Item Type with custom fields configured within the Fields tab, the Fields are made available within the Details tab of the request creation process.

These fields are in addition to the fields created by the Administrator within the Admin>Setup>Custom Fields, which are created for the specific Process, such as Incident, Problem, Change and Service Requests.

| Information | Classifications | Items | | Requests | Ei | elds | Desn | onses | |
|-----------------|-----------------|-----------|--------------|----------|----------|---------------------|----------------------|---------------|--|
| | | Items | | Requests | | | Kesp | | |
| Field | | Data Type | Style | Active | Required | Customer Visible | Customer Editable | Default Value | |
| Access Enabled? | | Boolean | Yes/No | | | 9 | 9 | No | |
| Type Custom 2 | | String | Text | | | 0 | 2 | | |
| Type Custom 3 | | String | Text | | | a | a | | |
| Type Custom 4 | | String | Text | | | 0 | a | | |
| Type Custom 5 | | String | Text | | | a | a | | |
| | | | 1 - 5 of 5 R | esults | | | | | |
| | | | 1 - 5 of 5 R | esults | | | | | |

To create Field labels within the Type Information screen:

- 1. Click the Fields tab
- 2. Click Edit
- 3. Select a Field hyperlink

The Custom Field screen is displayed.

| Type Information | | | | | |
|-----------------------------|---------------|----------|--------|-----------|----------------|
| Information Classifications | Items | Requests | Fields | Responses | |
| | | | | | Email Services |
| Custom Field | | | | | |
| Field Label | Type Custom 2 | | 0 | | |
| Category | ltem Type | | | | |
| Active | Yes No | | | | |
| | | | | Cancel | Save |

- 4. Click Yes to activate the Field
- 5. Complete the following details:
- 6.

| Categories Fields | Description |
|-------------------|------------------------|
| Category | |
| Field Label | The name of the field. |

| Categories Fields | Description |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active | Indicates if the field is active. |
| Required | Indicates if the field is required or mandatory field. |
| Customer Visible | Defines if the Customer can see the field within the |
| | Customer Portal. |
| | If Yes is selected, define if the Customer can edit the field information on the Customer Portal. |
| Data Type | Dictates the field's Data Type. The options available include : |
| | String - List or Free Text |
| | Number |
| | Boolean - radio buttons for Yes/No and True/ False |
| | Date - creates a date field |
| | Currency- creates a currency field |
| | Hyperlink. |
| Style | Defines how the data is recorded or presented in the field. (e.g., String - List or Free Text field.) |
| | See Lists or below for more information about creating a list within the field. |
| Unique Value | When active, the system prevents the duplication of data within the customized field. |
| Default Value | Value entered is the default system entry for the field, when the field is not completed manually. |
| Input Validation | When enabled the Input Mask and User Mask can be defined. |
| | <i>Input Mask</i> : A regular expression to use for data validation of values entered by a User (i.e., Zip/Post Code, telephone no.) |
| | <i>User Mask</i> : A User Friendly representation of the Input Mask that Customers can understand should it appear in a validation error message. |
| Enable Description | When enabled a Description field appears, allowing the User to enter details of what information is the field is expected to capture. These details are accessible next to the custom field on the relevant screen. |

7. Click Save

The active Field will now be available during the request creation process, for all Items that use the Item Type.

| Customer | Details | | |
|----------------|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------|

Data Type - List

When the Data Type String - List is selected the List Contents field is displayed, which provides the facility to create a drop down list to be created as options within the field.

To create a new list entry within the List Contents field:

1. Right click the Entries link

The Create option is displayed

| Style | Text List | | |
|--------------------|-----------|--------|--|
| List Contents | Entries | | |
| Default Value | Create | | |
| Enable Deparintion | Rename | | |
| Enable Description | Delete | | |
| | Cance | l Save | |

2. Click Create

A New node link displayed

| Style | Text List | | |
|---------------|-------------|--|--|
| List Contents | 🛓 🔚 Entries | | |
| | New node | | |

- 3. Enter the name of the field
- 4. Click outside the field to save the entry

| List Contents | 🛓 🕼 Entries |
|---------------|-------------|
| | |

5. Repeat this process until all list entries have been added

To create a nested list, right click on the relevant list entry and repeat the above process.

| 🚛 🛄 Entries |
|------------------|
| 📲 🚛 offline work |
| 🗛 🛄 Connection |
| 🦾 🚛 New node |
| 🛺 Router |
| 🕼 Hardware |
| 🕼 Online |

6. To move an existing entry to a new position, select the entry, then drag and drop the entry into its new location

| Style | Text List |
|---------------|--------------------------------------------------------------------------------------|
| List Contents | 🛓 🔚 Entries |
| | Offine work Connection Router 	Hardware Hardware Hardware Online |

7. When all the relevant details have been defined for the custom field, click Save.

Creating Nested List Entries

List entries can be expanded to include nested options.

To create a nested list:

1. Right-click the relevant list entry header

The Create, Rename, Delete and Make Default options are displayed.

| Item Categories | | |
|-----------------|-----------------------------------------------------------------------------------------|----------|
| Category | Lifecycle Classifications Responses Types | |
| Classifications | | Hardware |
| Custom | Cassifications Configuration Faults Create Rename Delete Make Default | |
| | | Done |

2. Select Create

A text box will appear under the list entry.

- 3. Enter the name for the list entry
- 4. Click away from the text box to commit and save the change
- Move an existing list entry to a new position, if required Select the entry, then drag and drop the entry into its new location
- 6. The above steps can be repeated until the nested list is complete.

Renaming a List Entry

Any list entry can be renamed.

To rename a list entry:

1. Right-click the list entry link

| 🛓 📗 Classif | ications | |
|-------------|--------------|---------|
| 🚽 🚛 Cor | nfiguration | |
| à. 🛄 | Faults | |
| | Internal | |
| L. | 📗 External | |
| 🛄 Do | Create | |
| - 🛄 Ge | Rename | |
| ··· 🛄 Ma | Delete | |
| | Make Default | |

- 2. Click Rename
- 3. Edit the field content
- 4. Click away from the text field to save the change.

Deleting a List Entry

To delete a list entry:

- 1. Right-click the relevant list entry
- 2. Click Delete
- 3. Click Done when the list is complete.

5.6.5 Priority

The Priority determines the timeframe in which an Incident should be handled and sets the service level targets adopted by the Incident that drive the SLA triggers and actions. It represents the degree of importance of the Incident to the Customer and also indicates the urgency of the request to the Technician.

An Incident can have one of four possible Priorities:

- Urgent
- High
- Medium
- Low.

Setting Incident Priority

The Administrator configures the options for determining the Priority within the Setup>Privileges>Request tab. The Priority options include:

- Selected Priority where the system configured default Priority is applied to the request but can be manually adjusted by the User
- Derived Priority where the Impact is derived from the Item Criticality and the User enters the Urgency, enabling the system to calculate the Priority.

Urgency: The value selected reflects how quickly a resolution is required

Impact: The value selected indicates the impact the Incident has on the User and Organization. The higher the Impact the higher the Priority to resolve the Incident.

If the Administrator has set the Request Priority option to Derived, the Priority of an Incident results from the Impact being mapped from the Criticality of the Item and then combined with the selected Urgency. However, if required, the Impact can be manually adjusted within the Incident Information screen to affect the Priority.

The following table displays the calculations applied by the system using the Item Criticality mapped directly to the Incident Impact, to determine an Incident's Priority:

| Impact / Urgency | Urgent | High | Moderate | Low | Very Low |
|------------------|--------|-------|----------|-------|----------|
| Critical | 1.000 | 0.850 | 0.700 | 0.550 | 0.410 |
| High | 0.850 | 0.723 | 0.595 | 0.468 | 0.349 |
| Moderate | 0.700 | 0.595 | 0.490 | 0.385 | 0.287 |
| Low | 0.550 | 0.468 | 0.385 | 0.303 | 0.226 |
| Very Low | 0.410 | 0.349 | 0.287 | 0.226 | 0.168 |
| | | | | | |

The above calculations result in the following Priorities:

| Priority | Upper | Lower |
|----------|-------|-------|
| Urgent | 1 | 0.83 |
| High | 0.83 | 0.58 |
| Medium | 0.58 | 0.34 |
| Low | 0.34 | 0 |

5.6.6 Email Signatures

Email Signatures that are applied at the base of all emails sent by the system are customized within the Full Email Templates filter of the Setup>Email>Templates tab. These can also be customized on a per Team basis using the Localization functionality.

To set the system default Signature:

- 1. Select Setup>Email
- 2. Go to the Templates Tab

The Full Email Templates filter view is displayed

- 3. Click to the final page of the Email Templates
- 4. Select the Signatures link

| Email | | | | | |

- 5. Edit the content
- 6. Click Save.

Team Signatures

After Teams have been created by the Supervisor in the User>Teams tab, an Administrator can customize the content of the Signature for the Team within the Setup>Localization>Content tab. This function allows individual signatures to be customized for each Team and in the relevant language for Customers.

To amend the Signature details on a per Team basis:

- 1. Select Setup>Localization
- 2. Click the Content tab
- 3. Select the Link of the language file to be customized

To create a signature file for each Team in English, select the English Locale link.

4. In the Category list select Email Signatures

A Signature list is displayed that includes the default Signature and the list of Team names configured in the system.

5. Select the Team Signature within the drop down list

| Localization | | | |
|--------------|--------------------------------------------------------------------|-----------|------------|
| Regions | Hours | Content | Holidays |

- 6. Click Edit
- 7. Amend the signature details
- 8. Click Save.

5.6.7 Titles

When the Use Titles option is enabled in the Setup>Privileges>Customer tab, the Titles option is visible within the Setup>Localization screen. Titles configured here become an option within the Customer and User Information screens. When this option is enabled, a list of title options are displayed in the Titles table.

| Localization | | | | | | |
|--------------|-------|----------------|--------|----------|--------|----------|
| Regions | Hours | Content | | Holidays | Titles | |

Edit a Title

Titles listed can be re-named or have their sort order changed as required.

To edit a pre-existing entry in the Titles list:

- 1. Within Setup>Localization>Titles
- 2. Select the relevant Title hyperlink
- 3. Amend the Title detail, if required

| Localization | | | | | | | | |
|--------------|-----|-------|----|--------|---|---------|--------|--|
| Regions | | Hours | Co | ntent | H | olidays | Titles | |
| Details | | | | | | | | |
| Title | Mr. | | | | | | | |
| Sort Order | 15 | | | | | | | |
| | | | | Cancel | | Delete | Save | |

4. Update the Sort Order detail, if required

This will change where the Title appears in the drop-down list options when the Title field is included in the Customer Information screen.

5. Click Save.

Alternatively, to remove an entry from the Titles list, select the Title hyperlink and click Delete.

Create a Title

To create an additional Title list option:

- 1. Within Setup>Localization>Titles
- 2. Select the New button

| Localization | | | | |
|--------------|-------|---------|----------|--------|
| Regions | Hours | Content | Holidays | Titles |
| Details | | | | |
| Title | | | | |
| Sort Order | | | | |
| | | | Cancel | Save |

- 3. Complete the Title details
- 4. Enter Sort Order number

This will define where the Title appears in the drop-down list options when the Title field is included in the Customer Information screen.

5. Click Save.

5.7 Licenses

The Licenses menu displays information about the currently installed license. Details of the current license, hosting server and licensed users can be viewed from this screen. A new license can also be installed.

IMPORTANT: Service Desk has two editions that are differentiated by different License Keys:

- ZENworks Service Desk for Incident Management: This includes Incident, Configuration, Knowledge, and Service Level Management (Basic) feature with an emphasis on internal or external customer support. This comes with single Incident Workflow, and can be configured only with single LDAP/AD source.
- ZENworks Service Desk for ITIL Management: This is a comprehensive service management solution that is fully compliant with Information Technology Infrastructure Library(ITIL)standards.ZENworks Service Desk for ITIL Management supports eleven core ITIL processes including Request, Incident, Problem, Change; Configuration, Knowledge, Release and Deployment; Finance, Service Level Management, Service Catalog, and Service Portfolio. This enterprise-wide solution delivers complete customer service and offers support for any size organization.

5.7.1 Viewing a License

To view a license:

1. Select Setup > License. The Licensing page appears.

| Licensing | | | | | |
|----------------------------------------------|---------------|----|---------|-------|--|
| License | Host | | Install | Users | |
| Product Service Manager Version #7.2 | | | | | |
| Licensee Novell | | | | | |
| User Limit 20 (Licensed: 0) (Temporar | y: 20) (Used: | 6) | | | |
| Incident Roles 20 (Licensed: 0) (Temporar | y: 20) (Used: | 6) | | | |
| Request Roles 20 (Licensed: 0) (Temporar | y: 20) (Used: | 6) | | | |
| Problem Roles 20 (Licensed: 0) (Temporar | y: 20) (Used: | 6) | | | |
| Change Roles 20 (Licensed: 0) (Temporar | y: 20) (Used: | 6) | | | |
| Install Date 12/07/15 10:30 | | | | | |
| Temporary | | | | | |
| Start Date December 8, 2015 | | | | | |
| End Date February 6, 2016 | | | | | |
| Status Valid License | | | | | |

You can see the details about License information below:

| License Information | Details |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product | Identifies which service management product is currently installed. |
| Licensee | The organization that holds the license. |
| User Limit | The maximum number of non-Customer users that are allowed to use the system. Value inside brackets indicates how many licenses have already been used. |
| Incident Roles | The number of individual Incident Management licenses purchased. |
| Request Roles | The number of individual Request Fulfillment licenses purchased. |
| Problem Roles | The number of individual Problem Management licenses purchased. |
| Change Roles | The number of individual Change Management licenses purchased. |

| License Information | Details |
|---------------------|---------------------------------------------------|
| Install Date | The date on which the license is installed. |
| Status | Indicates whether the license is currently valid. |
| | |

NOTE: Highlighted fields apply in Service Manager only.

5.7.2 Host Tab

The Host Tab shows the host name and IP address for the server where the application is deployed.

5.7.3 Install Tab

The Install Tab allows a new license to be entered using a License Key and Certificate for the application.

Updating License Information

To update License Information:

1. Select Setup > Licenses > Install. The Install Tab appears.

| Licensing | | | |
|-------------|------|---------|-------------|
| License | Host | Install | Users |
| License Key | | | |
| Certificate | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | .41 |
| | | (| Save |
| | | | .:: Save |

- 2. Enter the license key for the application.
- 3. Enter the Certificate details.
- 4. Click Save. The License tab will show the updated license details.

5.7.4 Users Tab

The Users Tab lists all current Users of the system, including their assigned processes. Administrators can filter the list based on process by using the Filter drop-down box in the top right corner of the Users tab.

| Licensing | | | | | | | |
|------------|-------------|------------|-------------------|-------------------|---------------------------------------------------------------|-----------------------------------|------|
| Licen | ise | Host | Install | U | sers | | |
| First Name | ≣ Last Name | ∎ Username | E | Inciden Proces | All Users [s) All Users [sy Change Proc Incident Pro | s] :ess Users [:cess Users | sys] |
| Vaibhav | Jain | vaibhav@ej | pm.blr.novell.com | | Problem Pro Request Pro | | |
| Joe | К | joe@epm.b | lr.novell.com | 0 | 0 | 9 | 0 |
| Ingo | Engels | ingo@epm. | .blr.novell.com | 0 | 0 | 9 | 0 |
| Craig | Wilson | craig@epm | .blr.novell.com | 0 | 0 | 0 | 0 |
| Sankar | R | sankar@ep | m.blr.novell.com | 0 | 0 | 0 | 0 |
| Kamal | К | kamal@epi | m.blr.novell.com | 0 | 0 | 9 | 9 |
| | | 1 - 6 | of 6 Results | | | | |
| | | | | | | Done | |

NOTE: The Process filter and columns (Problem, Change and Request Process Users) apply in Service Manager only.

5.8 Database

This section is used to specify the JDBC Database connection details that the service management application uses to connect to the database.

5.8.1 Configuring Database Settings

To configure database settings:

1. Select Setup>Database>Edit The Database Configuration screen appears.

| Database Configuration |
|------------------------|
| Database |
| Database Type |
| PostgreSQL 💌 |
| Database Server Host |
| 10.71.65.64 |
| Database Server Port |
| 5432 |
| Database Name |
| nsd |
| Database Username |
| nsd |
| Password |
| •••••• |
| Cancel Advanced Test |
| Save |

Database Setup

| Database Type | Use the dropdown box to select the type of database. |
|---------------|------------------------------------------------------|
| Server Host | Enter the IP Address of the Server Host. |
| Server Port | Enter the Server Port number. |
| Database | Enter the database name. |
| User name | Enter the Username |
| Password | Enter the Password. |

- 2. Enter or modify database connection details
- 3. Select the Test button to verify the details entered and check the connection
- 4. Click Save.

NOTE: The system must be re-started for any changes to take effect.

5.8.2 Test Button

Allows the Administrator to validate the database connection details between the service management application and the database. A system message will advise whether the connection was successful.

5.8.3 Advanced Button

The Advanced options allows the Administrator to change the default connection type, as well as generating scripts based on the database selected. *When the Advanced button is clicked, the Connection Type field displays a drop-down menu to select the JDBC connection. This option is set by default to Internal JDBC.*

NOTE: Changing the connection type to Custom JDBC Driver allows the Administrator to change the driver. *This option is NOT recommended.*

| Database Configuration |
|------------------------|
| Database |
| Connection Type |
| Internal JDBC |
| Database Type |
| PostgreSQL 🔹 |
| Database Server Host |
| 10.71.65.64 |
| Database Server Port |
| 5432 |
| Database Name |
| nsd |
| Database Username |
| nsd |
| Password |
| ••••• |
| Cancel Create Upgrade |
| Drop Test Save |

The buttons displayed provide the following functionality:

| Advanced Settings | Description |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Create | Generates a SQL creation script for the connected database that can be used by a DBA to create the system database. |
| Upgrade | Allows DBAs to upgrade to the database for a new release. |
| | NOTE: Before upgrading make a backup of the existing database. |
| Drop | Creates a script that the database administrator can run against an existing system database to erase the schema and content. |

5.9 LDAP

- Section 5.9.1, "LDAP Authentication," on page 464
- Section 5.9.2, "Active Directory Integration," on page 466
- Section 5.9.3, "LDAP Server Integration," on page 469
- Section 5.9.4, "LDAP/Active Directory Advanced Settings," on page 473

5.9.1 LDAP Authentication

There are several ways to authenticate users of the service management application. By default the system uses its internal authentication mechanism but there is also the option to authenticate against one or more Directory Servers or use OpenID Providers.

Internal Authentication

Using internal authentication requires the Administrator or Supervisor to create accounts for all User types by entering the contact information, access levels and password. This information is then saved to the system database. The typical case for using Internal Authentication is where there are few Users, or in an environment that has no pre-existing directory server. Usually, the Administrator would configure the User accounts prior to announcing the system is operational, and from that point on, maintain the accounts as necessary. (See: Create Customers or Create Users.)

OpenID Providers

OpenID is a decentralized process to verify a Customer's or User's online identity. It addresses the single sign-on issue by not relying on a centralized website to confirm a User's identity. The system can be enabled to be an OpenID consumer, which provides seamless authentication between third party authentication utilities and the service management system. OpenID Providers are configured within the Social tab, and Customers or Users that have accounts with the configured OpenID Providers can log into the system by selecting the relevant icon on the Login page.

Directory Server Authentication

The system allows the Administrator to connect to one or more Directory Servers for User authentication purposes. This removes the need to create User accounts as it allows the application to synchronize User accounts and access levels with the existing Directory Server. It has the added benefit of allowing the Administrator to work with existing infrastructure. (See: AD Authentication or LDAP Authentication.)

Directory Server Groups (External Authentication)

Roles are used to grant access within the application. Users must be assigned to Groups on the directory server that correspond to the Roles within the support system. Group members are assigned Roles and access levels within the service management tool.

The default group names the system expects to find on the directory server are:

- Administrators
- Supervisors
- Technicians
- Partners
- Managers
- Finance
- Customers.

The Group names can be customized in the LDAP/Active Directory Advanced tab. Users can belong to more than one group, for example if a User holds the Roles of Technician and Manager, they would belong to the Technicians and Managers groups.

NOTE: Users can have only one of the Partner, Supervisor and Technician Roles. Therefore, they can belong to only one of these groups. However, they may also belong to any other group, or combination of groups.

The following fields may or may not be mapped, depending on the options set by the system Administrator:

- First Name
- Last Name
- Email
- Phone
- Mobile
- Pager
- Address
- City
- Zip
- Country.

Email Address

All User accounts must include an email address to be successfully imported into the system. If additional fields have been mapped from the authentication server to corresponding fields in the application, a drop-down menu containing all the optional values for the field will be available beside the mapped field. Choose the correct value from each list.

Mixed Mode Authentication

The application can use a combination of internal and external authentication. This means, the service management tool can be synchronized with a Directory Server to import User and Customer details as well as allowing Customer Accounts to be created directly within the system. Such a feature is useful, if the service and support solution is being used for internal and external customer support.

To enable Mixed Mode authentication, after the system has connected to the Directory Server, move to the Setup>Privileges>Customer tab and enable the Include Customers option to display the Mixed Mode field. Set the Mixed Mode option to Yes.

NOTE: If authenticating against a Directory Server, all User accounts will validate against the server except for the application default Administrator User. The default Administrator User account details can be modified within the My Account tab of the application.

5.9.2 Active Directory Integration

Active Directory is a unique implementation of the LDAP standard, as the requirements for communication need to conform to the Microsoft[™] Windows Authentication protocols. To meet this need, it is necessary to enter all domains from which Users will authenticate. Multiple sources of Active Directory can be synchronized with the system, if required.

Configuring the Active Directory Integration

To configure the Active Directory integration:

- 1. Select Setup > LDAP
- 2. Click New

The LDAP/Active Directory Server screen tab is displayed.

- 3. Enter the Server Name
- 4. Select Active Directory within the Type drop down list

| LDAP / Active Directory Setup | | |
|-------------------------------|--------------------|--|
| Server | | |
| Server | | |
| Name | | |
| Туре | Active Directory - | |

5. Define all the Domains from which Users will be authenticated

Domains will need to be entered in both NT and Windows 2000 domain naming systems formats. This is because Active Directory conforms to Microsoft[™], Windows NT and Windows 2000 authentication protocols.

Make entries with care, as they are not validated against the Directory Server by the system Domain Editor.

NOTE: Verify the Active Directory setup before you provide the Windows NT domain and Windows 2000 domain credentials.

| Name Type | For mydomain.mycompany.com NT Style = MYDOMAIN 2000 Style = mydomain.mycompany.com |
|------------------|------------------------------------------------------------------------------------------|
| Active Directory | Ó |
| Win NT Domain | |
| Win 2000 Domain | |

NOTE: Here is an example of both the naming conventions for the domain:

mydomain.mycompany.com

NT Style = MYDOMAIN

2K Style = mydomain.mycompany.com

- 6. To import LDAP Groups, select import group and specify Group Admin DN, Password and Group Node.
- 7. Click Save
- 8. Using the drop-down arrow, select the Default Domain, which is used in the following three ways:
 - on the login page
 - + to authenticate against, when synchronizing with the Directory Server
 - where the system expects to find the User Groups.
- 9. Enter all other required fields to configure the Directory Server
- 10.

| Settings | Description |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Security | Determines how the integration layer will authenticate. For Active Directory this should be set to Cleartext– Username + Password. Anonymous connections to Active Directory are rarely enabled. |
| Server Host | Enter the hostname or IP address of the Active Directory Server. On a Windows NT domain this will be the primary domain controller. |
| Server Port | The default Active Directory Server Port is 389. This is rarely changed. |
| Username | Used by the system to authenticate against the Active Directory Server when reading account information. The domain prefix/suffix will be appended, based on the default domain, when connecting to the Server. |

| Settings | Description |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Password | Enter the Password for the Username account. |
| Users Node | The component of the base domain name that refers to the location of the User Groups .For example, if the location of the User Groups is the following: |
| | ou=UserGroups, ou=MIS, dc=myoffice, dc=mycompany, dc=com (SeeLDAP/Active Directory Advanced Settings for information on Group configuration.) |
| | Groups must be in the default domain, in this case myoffice.mycompany.com. The Users Node only needs the location of the Groups within the default domain, so the Users Node in this example will be: ou=UserGroups, ou=MIS. |
| Group Admin Details | Group Admin DN: Specify the group admin DN. |
| | Example: cn=user, cn=users, dc=domain, dc=com |
| | Password: Specify the password of the DN. |
| | Group Node/Group based DN: If this field is not specified, then it considers the value specified in Users Node/Base DN. |
| | NOTE: The above options are enabled only when you select Import Groups check-box in the Groups section. |
| Locale | |
| Default Timezone | Select the default Timezone to be applied to all User accounts imported via Active Directory. |

11. Click Save.

Repeat the above process to add more than one authentication server for authorizing User access.

Test Button

The Test button creates a connection to the Active Directory Server, applying the configuration settings. If successful, it will attempt to determine how many Users are in each group and display a Results Screen.

NOTE: If the test fails, an error message will display the cause.

Sync Button

Sync

The Sync button runs the synchronization process to import all Users from the Server Directory. If new Active Directory Accounts have been created and those Users require immediate access to the system, a manual synchronization would be used.

Only one synchronization can run at a time. When multiple Users need access, create the accounts, then run a single manual synchronization.

A manual synchronization may take some time as it depends on the connection speed with the external service. The manual synchronization works best for small directories. Larger Active Directory implementations can take some time to propagate the changes, so account information may not be immediately available.

Importing Customers

Customer details can be imported using Active Directory by enabling the option, if required. When the system is setup to synchronize with Active Directory, move to the Setup>Privileges>Customer tab and enable the Include Customers option.

If there is a need to create Customers using Active Directory and the system's internal authentication capability, Mixed Mode authentication can also be enabled. After the option to Include Customers is set to Yes in the Customer Privilege tab, the Mixed Mode field is displayed. Set this option to Yes to allow Customers to be created directly in the system and using Active Directory.

Imported Account Usernames

Accounts imported from Active Directory use the UPN as the Username, as opposed to the NT style login. The domain component of the UPN is derived from the selected domain in the popup on the login page, which means Users need to enter their login name only to connect to the support application.

Login details are passed directly to the directory server for authentication and are not retained within the service management system.

5.9.3 LDAP Server Integration

Multiple types and sources of directory servers can be synchronized with the system at any one time. Among the several LDAP servers supported by the system, and which this section discusses, are the following:

- Open LDAP
- Netscape Directory Server
- Micro Focus eDirectory.

It should, however, be noted that LDAP does follow a standard and as such the settings detailed herein should also apply to other implementations.

Configuring LDAP Server Integration

To configure LDAP Server integration:

- 1. Select Setup>LDAP
- 2. Click New

The LDAP /Active Directory Server tab is displayed.

3. Enter the Server Name

(If the system is to synch with Zenworks, ensure the Server Name matches the User Source Name used by Zenworks.)

4. Select LDAP within the Type drop down list

| LDAP Setup | |
|------------|----------------------------------|
| Server | |
| Server | |
| Name | |
| Туре | LDAP Server |
| Settings | LDAP Server |
| Security | Active Directory ie + Password - |

- 5. Complete the Settings fields

| Fields | Description | | | | | |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| Security | Secure Socket Layering (SSL) encryption is provided for Active Directory and LDAP server integration. Details entered here determines how the integration layer authenticates. | | | | | |
| | User authentication can be with Secure Socket Layering (SSL) or Clear Text. Select Anonymous or User name and Password. | | | | | |
| | If Anonymous is selected, ensure anonymous access to the directory is available. | | | | | |
| Server Host | Enter the host name or IP Address of the LDAP Server. | | | | | |
| Server Port | This is the LDAP Server Port. The default is 389. | | | | | |

| Fields | Description |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| User name | The system authenticates the user name against the LDAP Server. Leave this blank for anonymous connections. |
| | Where a user name is provided, Netscape allows the internal users to connect as the account name, so using 'cn=Directory Manager' is acceptable. |
| | Open LDAP expects the fully qualified Domain Name for the user, regardless of access level, so at the very least 'cn=Manager,dc=example,dc=com'. |
| | For other accounts the user BaseDN is required. Users logging in need only enter their login name, it is assumed the login name will be unique across the entire directory. |
| Password | If a User account is specified in the User name field, enter the account password. |
| BaseDN | The Base Domain Name refers to the domain location of the User Groups. For example, assume that the location of the User Groups is the following: |
| | ou=UserGroups,ou=MIS,dc=myoffice,dc=mycompa ny,dc=com |
| | The above String would be the BaseDN. |
| Locale | |
| Default Timezone | Select the default Timezone to be applied to all User accounts imported using the authentication server. |

7. Enter all required fields to configure the Directory Server

| LDAP Setup | |
|------------------|-------------------------------------------------------------------|
| Server | Advanced |
| Server | |
| Name | epm.blr.novell.com |
| Туре | LDAP Server |
| Settings | |
| Security | Cleartext - Username + Password - |
| Server Host | 127.0.0.1 |
| Server Port | 389 |
| Username | Administrator |
| Password | ••••• |
| Base DN | ou=People,dc=MY-DOMAIN,dc=c (e.g. ou=Groups,DC=example,DC=com) |
| Locale | |
| Default Timezone | (GMT +5:30) New Delhi |
| Test | Sync Delete Cancel Save |

Test Button

Test

The Test button will create a connection to the LDAP Server using the configuration settings. If successful, it will attempt to determine how many Users are in the top level of each group and display a Results screen.

NOTE: If the test fails, an error message will display the cause.

Synch Button

Sync

The Synchronization button runs the synchronization process manually. It is most useful for the initial deployment, and when new directory server accounts have been created for Users who require immediate access to the system.

If using Certificates ensure the certificate details are entered in the Certificates tab before synchronizing.

Only one synchronization can run at a time. For multiple users needing access, create the accounts on the LDAP server then run a single manual synchronization.

A manual synchronization may take some time as it depends on the connection speed with the external service. The manual synchronization works best for small directories, as larger directories take more time to propagate changes.

Importing Customer Details

Customer details can be imported using LDAP by enabling the option, if required. When the system is setup to synchronize with LDAP, move to the Setup>Privileges>Customer tab and enable the Include Customers option.

If there is a need to create Customers using LDAP and the system's internal authentication capability, Mixed Mode authentication can also be enabled. After the option to Include Customers is set to Yes in the Customer Privilege tab, the Mixed Mode field is displayed. Set this option to Yes to allow Customers to be created directly in the system and using LDAP.

5.9.4 LDAP/Active Directory Advanced Settings

Before setting up the LDAP/ADS configuration within the system, the Advanced settings should be revised. The default setup assumes that the User Groups that the system uses to authenticate match what is on the server, and that the User information imported matches the attributes available on the server.

LDAP/Active Directory Advanced Options Set-up

To configure the Advanced options within the LDAP/Active Directoy Setup window:

1. Select Setup>Authentication

The LDAP /Active Directory Setup screen appears.

- 2. Click Edit
- 3. Move to the Advanced tab of the selected Authentication Server

| Active Directory | Advanced Setup | | |
|-------------------------------|-------------------|-------------------|----------------------------|
| Server | Advanced | | |
| | | | Revert to defaults |
| Update Schedule | | Attribute Mapping | |
| Interval | Weekly 💌 | First Name | Standard Custom |
| Commencement Time | Sun 🔻 @ 0:00 💌 | | givenName 💌 |
| User Groups | | Last Name | Standard Custom |
| Administrator Role | nsdAdministrators | | sn 💌 |
| Supervisor Role | nsdSupervisors | Primary Email | Standard Custom |
| Technician Role | nsdTechnicians | | mail 💌 |
| Partner Role | nsdPartners | Email Alias | Standard Custom |
| Manager Role | nsdManagers | | mail 💌 |
| | nsdFinance | Phone | Standard Custom |
| | nsdCustomers | | telephoneNumber |
| Settings | hodedocomero | Mobile | Standard Custom |
| Include Disable | Yes No | | mobile 💌 |

| | | Line Managers | |
| | | | Cancel Save |
| | | | |

4. Enter the relevant details for the fields, as required

5.

| Field | Description | | | | | |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|--|
| Revert to Defaults | Resets the installation defaults. | | | | | |
| Update Schedule | Sets a routine synchronization to update the system with current AD/LDAP accounts. Select the required Daily, Weekly or Monthly intervals and Commencement details. | | | | | |
| Commencement Time | Set the day of the week and time the system is to start automatically synchronizing with the directory server. | | | | | |
| User Groups | Provides imported Users Roles. (The system will look for these groups by default) | | | | | |
| | The User Group names can be customized, only requiring a unique name for each group. The group names on the Directory Server must be identical to the User Group names entered here. Customize or use the default User Group names as necessary. | | | | | |
| | Members of each group will be assigned the appropriate Role within the system. To assign multiple Roles to a User, make sure they are members of each of the required groups. | | | | | |
| | Users can have only one of the Supervisor, Technician or Partner Roles but they can also have any other Role or combination of Roles. | | | | | |
| Settings | Include Disable Accounts: Set to Yes if the system is to import disabled accounts details when synched with an LDAP/AD server. | | | | | |
| | Include Customers: Set to Yes if the system is to import Customer details when synched with an LDAP/AD server. | | | | | |
| | Default Date Style: Set this field as the default date format for imported users. | | | | | |
| | NOTE: Ensure that you set this field before importing LDAP users, and this will be applicable only for newly imported users. | | | | | |

| Field | Description |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Attribute Mapping | Maps attributes from the directory server to corresponding fields in the system. Native system fields are First Name, Last Name, Email (A unique Email Address must be included for a User account to be created), Phone, Mobile, Pager, Address, City, Zip and Country. |
| | NOTE: Mandatory User information for new and existing User accounts include the First Name, Last Name and Email address. If these details are not available, the application will not validate an existing User account and automatically reassign any open or active requests to another valid User. |
| | <i>Standard</i> :Next to each field is a drop-down menu containing the list of default fields specific to either LDAP or ActiveDirectory server type. For each native name, the default fields are selected. Use the default mapping or select the mapping attribute as required. |
| | Custom: Select the Custom option to manually enter an Attribute Field. |
| GUID | Global Unique Identifier |
| | For ADS select objectGUID |
| | For OpenLDAP select entryUUID |
| | For eDirectory select GUID. |
| LDAP User fields/ Mixed Mode User Fields | The LDAP User field headings will be replaced with any custom LDAP/ADS Accounts fields created by the Administrator in Setup>Custom Fields (See Custom Fields.), or Mixed Mode User Fields if the Mixed Mode option is enabled in the Server tab. |
| | Use the drop-down list to select the appropriate mapping to the matching directory server field or select Custom to manually enter a Field. |
| Customer Orgs | Organizational Unit relationships can also be mapped from the authentication server. By default this is not enabled. To activate Customer Organizational Unit mapping, select Yes for the Import Customer Organizational Units option and define where the Company and Department information is to be derived. |
| Line Managers | LDAP attribute that defines a Customer's line manager, which is used for processing approvals on Service and Change Requests. Only system users with the Customer Role can be assigned as Line Managers. |

6. Click Save.

Mapping Fields to the Matching Directory Server Field

The LDAP User field headings will be replaced with any custom LDAP/ADS fields created by the Administrator in Setup>Custom Fields. See Custom Fields. Use the drop-down list to select the appropriate mapping to the matching directory server field or select Custom to manually enter a Field.

| LDAP User field 1 | O Standard | Custom |
|-------------------|------------|----------------------------|
| | Groups | |
| LDAP User field 2 | Standard | Custom |
| | | |

User details are imported when synchronization with the Active Directory/LDAP server takes place. Imported fields cannot be modified through the service management tool directly, the appropriate authentication server console must be used.

Import Customer Org Units

Organizational Unit relationships can also be mapped from the authentication server. By default this is not enabled. To activate Customer Organizational Unit mapping, select Yes for the Import Customer Organizational Units option.

| Customer Orgs | 🖲 Yes 🔘 No | |
|---------------|-----------------|---|
| Company | Standard Custom | |
| | company | • |
| Department | Standard Custom | |
| | department | • |

NOTE: The details of the Org. Units are not populated upon this synch, only the Org. Unit names.

For the Org. Unit details to be assigned to Customer or User Information, create the Org. Unit in the Supervisor>User>Organizational Units tab and ensure the Org. Unit name is identical to what is stored in the authentication server. If the details are not identical, the system will create another Org. Unit.

5.10 PSS

• Section 5.10.1, "Password Self Service," on page 477

5.10.1 Password Self Service

The Password Self Service option is provided for organizations using Password Management tools such as NetIQ SSPR, PWM, or other similar tools to enable users to manage their passwords themselves without contacting service desk.

This is applicable when the system is using Directory Servers such as Active Directory or eDirectory for user authentication. It is not applicable when using internal authentication.

It should be noted that these tools provide a URL in different formats to redirect the end users to manage their passwords, so administrators are advised to check the documentation of their PSS tool for the URL and type of services to provide – such as reset forgotten password, change current password, setup of challenge response, new user registration, and so forth. Organizations might prefer to provide service to either reset a forgotten password or change a current password.

When configured, PSS allows customers and users to manage their passwords in their directory servers, thereby reducing requests to the service desk and increasing end user productivity.

To configure PSS:

1 Select Setup > PSS

| ম | <u>ी</u> User | | 🗟 Reports | | စို My Account | | ۞ Setup | | С СМ5 | | |
|---------|-----------------------|------------|--------------|--------------|----------------|----------|---------|-----|-------|---------|---------|
| Email C | ustom Fields | Privileges | Customize | Localization | Licenses | Database | LDAP | PSS | SSO | Reports | Billing |
| PSS S | Setup | | | | | | | | | | |

- 5 Click Save.
- 6 Log out to find the Password Self Service link on the main login screen.

By default, the system uses the display string **Password Self Service**. If you want to use your own display string or use a localized string, do the following:

- 1 Click Setup > Localization > Content,
- 2 Select UI Messages as the Category.
- 3 Select **PSS** as the message string.
- 4 Click Edit to change the display string.
- 5 Click Save after modifying the message string.

5.11 SSO

5.11.1 Single Sign On

Single sign-on (SSO) options are provided for organizations that use request header-based, single sign-on technologies such as JOSSO, Shibboleth or Site Minder. These work best with directory server technologies, because they keep the account details synchronized. It should be noted that some of these technologies rely on application server redirects to be implemented, so administrators are advised to check the documentation of their SSO provider for details on how to activate and use request header-based Single Sign On.

When configured, SSO allows Customers and Users who have logged in to their networks using their directory server authentication credentials to automatically access the service management application without re-entering their login details.

To configure SSO:

1. Select Setup > SSO.

| SSO Setup | | |
|----------------|--------|---------------|
| sso | Social | KeyShield SSO |
| Edit | | |
| Single Sign On | | |
| Active | Off On | |

- 2. Click Edit.
- 3. Toggle to On.

| SSO Setup | | | |
|----------------|--------|---------------|---|
| sso | Social | KeyShield SSO | |
| Single Sign On | | | 0 |
| Active | Off On | | |
| HTTP Headers | | | |
| Session ID | | | |
| Username | | | |
| Email | | | |
| | Can | icel Save | |

4. Complete all fields:

| Fields | Description |
|------------|----------------------------------------------------------------------------------------------------------------------------|
| Session ID | Enter the name of the HTTP Header that contains the SSO session id. All the Headers can be viewed by clicking 1. |
| Username | Enter the name of the HTTP Header that will contain the Login of the User attempting to access the support system. |
| Email | Enter the name of the HTTP Header that will contain the email address of the User attempting to access the support system. |

- 5. To view all Session Headers, click 🕕.
- 6. Click Save.

5.11.2 Keyshield SSO

The Keyshield SSO feature is now integrated into ZENworks Service Desk this feature provides a single sign-on mechanism, and works with other Micro Focus products such as Filr, GroupWise, and Vibe.

KeyShield SSO is a single sign-on that enable users to access their applications without authenticate to each one of them. When configured, Keyshield enables customers and users who have logged onto their networks using their directory server authentication credentials, to automatically access the service management application without re-entering their login details.

To configure KeyShield SSO:

- 1 Select Setup > Setup > SSO.
- 2 In the SSO page, click KeyShield SSO.

| SSO Setup | |
|-----------------------|----------------------|
| sso | Social KeyShield SSO |
| KeyShield SSO | |
| Enable KeyShield SSO | Off On |
| Settings | |
| KeyShield Server URL | |
| API Authorization Key | |
| | Cancel Save |

- **3** Toggle On, then specify the following settings:
 - KeyShield Server URL: The KeyShield server's IP address (https:// <ipaddress>:<port>).
 - API Authorization Key: The API key generated in the Keyshield server.
- 4 Click Save.

5.11.3 Social

The Social tab is available when the OpenID Consumer option is enabled within the Setup>Privileges>System tab. This functionality delegates the authentication of Customers and Users when accessing the system to OpenID Providers. Users and Customers with accounts with OpenID Providers recorded in the system can invoke the functionality by clicking the appropriate icon displayed on the system Log in page.

Within the Social tab, the OpenID Providers that are to be used to verify the online identity of Customers and Users accessing the system are configured. By default the system includes the details for Google and Yahoo, which can be enabled by opening the relevant link and selecting Yes.

Enabling Default Providers

To use the default OpenID Provider options of Google or Yahoo to authenticate Customer and User access:

1. Select Setup > SSO > Social tab

| <u>≜</u> Enabled |
|--------------------|
| |
| |
| 1 - 2 of 2 Results |
| |

- 2. Click the URL Name of the relevant Provider
- 3. Select Edit
- 4. Toggle the Enable option to Yes
- 5. Click Save.

The Open ID Provider icon will now be visible on the system Login page.

To remove the system default OpenID Provider list options, follow the above steps, but select the Delete button within the Details view of the OpenID Provider.

Defining an OpenID Provider

To enter the account details for an OpenID Provider:

- 1. Select Setup > SSO > Social tab
- 2. Click New

| cial Authentication | on | |
|---------------------|-------------|--|
| SSO | Social | |
| Details | | |
| Name | | |
| Enable | ⊖Yes ●No | |
| lcon | * | |
| URL | | |
| | Cancel Save | |

- 3. Complete the Name field
- 4. Select Yes to enable the Provider to authenticate Users and Customers

5. Click 12 to upload the OpenID's icon that will be displayed on the system Log in page

| lcon | Choose File no file selected | 😢 🙆 |
|------|------------------------------|-----|
| | 32 x 32 pixels | |

- Click Choose File to search for the image file The image must be 32x32 pixels.
- 7. Click ____ to upload
- 8. Define the URL details for the OpenID Provider
- 9. Click Save.

The icon for the OpenID Provider will now be active on the system Log in page.

5.12 Reports

5.12.1 Schedule Reports

Schedule Reports allow the Administrator to configure the system to automatically send reports via email to Supervisor, Technician, Finance, Partner and Manager Users on a regular basis. The content of the email is defined on a per Role basis with the reports drawn from the default system reports or those built using the system report builder.

Setting Up Scheduled Reports

To set up scheduled reports:

1. Select Setup>Reports

| Scheduled Reports | | |
|---------------------|--------------------|--------|
| Schedule | Customize | |
| Role <u>à</u> Schee | dule | Active |
| Finance | | |
| Manager | | |
| Partner | | |
| Supervisor | | |
| Technician | | |
| | 1 - 5 of 5 Results | |

2. Select the relevant Role link

The screen defaults to the Details screen.

 Click Yes within the Active field Scheduled reports are enabled for all Users of selected Role.

| email Description | |
|-------------------|---------------------------------------------------------------------------------------------------|
| Send | Define if the automated reports are to be sent Daily, Weekly or Monthly. |
| Time | Using the 24 hour clock, set what time of day the report is to be emailed to the User Role group. |
| Content | |
| Date Range | Set the number of previous days, weeks or months that the report is to be calculated over. |
| Page Size | Nominate A4, Legal or Letter as the page format size for the report. |
| Selected Reports | |
| 9 0 | Add or remove reports in this section. |

4. Complete the email details

Nominate the frequency and time of day the reports are to be sent.

5. Complete the Date Range for the emailed reports

The Date Range intervals include daily, weekly and monthly. Define the number and interval type for sending the reports.

- 6. Set the paper size
- 7. Click 😳 to add reports to the schedule

The screen defaults to the display Category and Name drop down lists.

8. Select the Report Category

The Name list is refined based on the Category selected. For example, if KPI is set as the Report Category the Names list includes all types of KPI summary reports included by default in the system.

| Scheduled Reports | |
|-------------------|------------------------------------------------|
| Schedule | Customize |
| Report | |
| Category | Service Level |
| Name | Service Level Organization Configuration |
| Customer | Finance |
| | Find Customer (Last Name) |
| | Cancel Add |

9. Define the report Name and any other required options

Based on the Report Name selected, the options to create a trend report or define the results by specific parameters (i.e., Customer Name, Item Type, etc) are displayed.

10. Click Add

Repeats steps 7 to 10 to associate all the required reports with the scheduled reports email.

11. Select Test, if required

| Schedul | ed Reports | |
|---------|------------|----------------------------------|
| Sc | hedule | Customize |
| | Report | |
| | Category | Service Level |
| | Name | Requests SLA Times by Customer 💌 |
| | Customer | |
| | | Find Customer (Last Name) |
| | | Cancel Add |

- 12. Search and select the User who is to receive the test report
- 13. Click Test

A test copy of the report is sent to the defined User with the test interval range based on *one* day, week or month, not the actual number defined in the Previous field for the scheduled reporting period.

14. Click Save.

Repeat the above process for all relevant User Roles.

5.12.2 Customize Reports

The Customize tab displays a list of sample customized reports that have been created within Pentaho and made available for publication within the Supervisor>Reports>Customize tab. These default customized reports can be deleted, if required. Alternatively, more reports can be imported for publication within the support system using the Customize tab.

For more information about creating customized reports using Pentaho, see Creating Custom Reports.

Importing Reports

Using the ZIP files exported from Pentaho, to import the customized reports:

- 1. Select Setup>Reports
- 2. Click Import

| Custom Reports | |
|---------------------------------------------------------------------|--------|
| Schedule Customize | |
| Welcome to the Import Wizard | |
| Select the ZIP file you wish to import: Browse No file selected. | |
| Cancel | Upload |

- 3. Select Choose File to search and select the Zip file to be imported
- 4. Click Upload

5. Click Import.

Deleting Reports

To remove custom reports from the system:

- 1. Select Setup>Reports
- 2. Check the report in the list to be removed

| Custom Reports | | |
|----------------|-------------------------------------|---|
| Schedule | Customize | |
| Import | Delete | |
| 🔄 Title | Description | ≣ |
| Users details | Users details 1 - 1 of 1 Results | |

3. Click Delete.

5.12.3 Creating Custom Reports

To provide Users with access to service management data that is meaningful to their organization, the reporting capability of the system has been extended through the integration with Pentaho Design Wizard. Pentaho allows Users to create customized reports relevant to their organizational requirements that are published in the Reports tab.

NOTE: The custom reports should be generated using Pentaho Report Designer 3.0.0.

Creating a Custom Report - Example

To create a report using Pentaho Report Design Wizard:

- 1. Start Pentaho Report Design Wizard
- 2. Enter a Title and Description for the report
- 3. Select a Template

For this example, LiveTime.xreportarc is selected. This template is available from system support and can be supplied on request.

| Pentaho Report Design Wizard | | | | | | 66 |

- 4. Click Next
- 5. Enter Database Connection information

Select the Connection Type: JNDI.

6. Click Add

The Add JNDI Connection page appears.

NOTE: It is important to note that the appropriate JDBC driver must to be added in order to connect to the database. To add the driver go to

< Design_Wizard_Home>\lib\jdbc .

7. Enter database connection details, click Test to confirm the connection

| 💿 Add JNDI Con | inection | × |
|----------------|-----------|---|
| JNDI Name | | |
| Driver | | |
| Connect String | | ~ |
| Username | | * |
| Password | | |
| | | |
| ŝ. | Test | |
| | Ok Cancel | |

- 8. Click OK
- 9. Select the Query Designer button to open the Query Designer window (ensure that the database is selected first)

Alternatively, enter a query in the text area provided.

NOTE: For a description of the system schema please contact Micro Focus Customer Center for a current Entity-Relationship Diagram.

10. Create a query as desired

11. Click Done when complete

The Query String will be displayed.

- 12. Click Next
- 13. Replace any variables within the template. For example, rename the Report Title, Page Headers and Footers

Select the Property to Map, then modify the property by selecting the Custom Value or Column options where relevant.

| Pentaho Report | Design Wizard | | | |

| | | | |

- 16. Click Next
- Set the formatting and group computations
 These include options such as SUM, AVG, MIN and MAX.
- 18. Select and update the display name for each field
- 19. Click Next
- 20. Configure the page layout The options include orientation, margins or add a watermark.

- 21. Click Next
- 22. Add to the report by configuring a chart or grand total
- 23. Modify column sizes or fonts
- 24. Click Publish.

Publishing a Report

For a newly created report to be available within the Reports tab of the service management application, it must be published.

To publish a Report:

- 1. Open a report within the Pentaho Report Design Wizard
- 2. Click the Publish button

The Publish Report to Server screen is displayed.

3. Select Publish To: Location

| Publish To: Server © Location Publish Information Name LiveTime-Report Publish Location C:/development/pentaho-solutions/samples/reporting Default Report Type pdf Server Iboss Deployment Settings Veb Application Name pentaho JBoss Deployment Location C:/development/pentaho-preconfiguredinstall/server/defauk/deploy | Publish Report to Server | |

| | | |
| | | ancel |

- 4. Enter a Name for the published report
- 5. Update the Publish Location to Desktop or on your local disk
- 6. Click OK

IMPORTANT

• Along with the published Pentaho files (.xml and .xaction), ZENworks Service Desk expects a .properties file.

Using Notepad create a .properties file.

In the .properties file, specify a title and a description as shown below:

```
title=<Report Title>
description=<Report description>
```

• The .properties file should be named the same as the .xml and .xaction files. For example:

```
basic-report.xml
```

```
basic-report.xaction
basic-report.properties
```

7. Locate the files and zip them into a single archive.

Customize

The Customized tab displays a list of sample customized reports that have been created within Pentaho and made available for publication within the Supervisor>Reports>Customize tab. These default customized reports can be deleted, if required. Alternatively, more reports can be imported for publication within the support system using the Customize tab.

Importing Reports

Using the ZIP files exported from Pentaho, to import the customized reports:

- 1. Select Setup>Reports
- 2. Click

| Import | |
|-----------------------------------------|--------|
| Custom Reports | |
| Schedule Customize | |
| Welcome to the Import Wizard | |
| Select the ZIP file you wish to import: | 1 |
| Browse No file selected. | |
| Cancel | Upload |

- 3. Select Choose File to search and select the Zip file to be imported
- 4. Click

Upload

| Schedule | ustomize | |
|----------------------------|-------------------|--------|
| Velcome to the Import Wiza | rd | |
| File: Users Details.zip | | 100 |
| Valid Contents: | | |
| File Name | File Size (bytes) | |
| Users details.properties | 48 | |
| Users details.xaction | 2283 | |
| Users details.xml | 6625 | |
| Users details.xaction | 2283 6625 | |
| | Cancel | Import |

Viewing the Imported Reports

After successfully importing the Pentaho reports, perform the following to view the reports:

- 1. Click Reports, and then Custom.
- 2. Select the report title that was specified in the.properties file, and then click Create.

Sample Reports

A number of sample reports are included with the system, which can be accessed by the system Administrator in Admin>Setup>Reports>Customize tab.

Deleting Reports

To remove custom reports from the system:

- 1. Select Setup>Reports
- 2. Check the report in the list to be removed

| Cu | stom Report | S | | |
|----------|-------------|--------|----------------------------------------------------------------------------------------------------------------------------------------|--|
| | Schedule | Custo | mize | |
| | Import | Delete | | |
| | Title | ≡ | Description | |

| | Sample 5 | | Group Summary | |
| | Sample 2 | | All Incidents raised by the selected Customer with the selected Status. | |
| | Sample 4 | | Team Escalation Layer Summary. Provide a Incident or Problem Team name in the box below. | |
| | Sample 3 | | Item ownership by Item Type. | |
| | Sample 1 | | All Incidents raised after the provided Date Parameter. | |
| | | | 1 - 6 of 6 Results | |
| | | | | |

3. Click Delete

NOTE: For more information about configuring Pentaho and customizing parameters, see the following Articles in the support Knowledge Base:

- Enhancing LiveTime Custom Reports
- Creating Custom Reports within LiveTime.

5.13 Billing

5.13.1 Billing

The Billing module allows Users to create Invoices, Purchase Orders and manage Customer support Contracts. Billing allows support organizations to charge Customers for support services provided, and manage Items purchased with Service Contracts.

When the Billing module is enabled by the system administrator, the Invoices and Purchase Orders sub-menu options are available within the application Finance tab. Purchase orders can simplify the tracking of where and when new Items are purchased or leased. This feature is not meant to replace an organization's original PO system, it is designed to easily link a specific PO number (and its associated vendor and date information) with an Item.

The Invoices section allows Customers to be billed for products (Items) or support services (Contracts) provided by the organization. An Invoice can be created when an Item and Service Contract is ordered by a Customer. Alternatively, Invoices can be created for Service Contracts alone, as the Item may already exist in the system.

Invoices can be generated through the following screens:

Within the Invoices section

- When a request is created against an out-of-contract Item
- When an Item, Customer or Organizational Unit is created, or edited to assign a new SLA.

The Billing options include:

- Purchase Orders
- Contracts
- Invoices.

| Billing | Description |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Purchase Orders | Allow Users to track Items from the moment an order is placed to its delivery and implementation. POs cover leased and purchased Items. |
| Contracts | Within Contracts, Users can manage Customer Service agreements over a specific time period. |
| Invoices | Allow Users to charge Customers for contracts. When Invoices are activated, Contracts are automatically enabled |
| Display SLA Prices | Enables SLA Price fields to be visible in the SLA Editor screen. This allows the Supervisor to allocate costs to SLAs and assists with the calculation of Break Even Point costs for Service Items. |
| | See: SLAs. |
| Email Notifications | (This option is visible when Contracts are enabled.) |
| | Enables the system to update Finance Users via automated emails, regarding Invoice and/or Contract related matters. |
| Global Settings | |
| Currency | Defines the currency that is to be automatically applied by the system for all financial transactions. |

NOTE: Invoices and Contracts will not work when Global Items are in use. If Billing is enabled after the application has been in use, a Supervisor will need to assign owners to Global Items before Billing can be activated.

5.13.2 Invoices

순 Home 🛛 🕏 Operations 👘 😥 Change 🗮 Configuration 👘 📀 Service 🧕 🤶 User 👘 🕲 Knowledge 👘 🗒 Reports 🔤 Finance

The Invoices sub-menu option is available within the Finance tab when the option has been enabled by the system administrator. Invoices allows support organizations to charge Customers for support services provided, and manage Items purchased with Service Contracts.

(For more information about enabling Billing, see: Setup>Billing within the Administrator Guide.)

An Invoice can be created when an Item and Service Contract is ordered by a Customer. Alternatively, Invoices can be created for Service Contracts alone, as the Item may already exist in the system.

Invoices can be generated by the system through the following screens:

- Within the Invoices section
- When an Incident is created against an out-of-contract Item
- When an Item, Customer or Organizational Unit is created, or edited to assign a new SLA.

The following sections are covered within Invoices:

- Invoice creation creating an invoice for a Service Contract or an Item with a Service Contract
- Invoice summary screen Summary tabs, emailing and editing an Invoice, and information about an Invoice Status
- Invoice payment and delivery processing an Invoice when payment is required.

5.13.3 Creating Invoices

Invoices can be created for Items and associated service Contracts, and for Items or Service Contracts only.

Creating an Invoice to purchase an Item and Service Contract

To create an Invoice:

- 1. Select Finance>Invoices
- 2. Click New

The Customer tab appears.

- 3. To assign a Customer to the Invoice:
 - a. Search for a Customer who already exists in the system

Enter any known information such as their First Name, Last Name, Email Address, Org. Unit or Username in the Find Customer fields. To view a list of all Customers in the database, leave all the fields blank.

| Invoice Editor | | | | | | |
|------------------|----------------------|----------|---------|----------------------|-----------|------|
| Customer | Items | Contract | Summary | | | |
| | | | | | | |
| Contact | | | | | | |

5.13.4 Invoice Summary

The Invoice Summary tab includes the invoiced Customer, delivery and order details. It allows Users to email the Invoice to relevant parties and displays the status of the Invoice. The summary screen also allows Finance Users to process an Invoice when payment is received.

The following fields are included with the Invoice Summary tab:

| Fields | Description |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| PO Number | Auto-generated or manually entered order identification number. |
| Order Date | Auto-generated or manually adjusted order date. |
| Invoice Date | Auto-generated or manually adjusted date for the invoice creation. |
| Due Date | The date the invoice is due. Auto-generated based on the Default Invoice Due value defined by the Administrator. |
| Entered By | The User who created the invoice. |
| Processed By | The User who processed the invoice. |
| Invoice Status | Displays what stage of the order process the invoice is in. |
| Delivery Status | Details the status of delivery for items on the invoice |
| Payment Status | Details if the invoice has been paid |
| Payment Date | Date the invoice was processed for payment. |
| Shipping Date | Manually entered date of shipping. |
| Tracking Number | Reference number manually entered to track the order. |
| Apply Terms | For the system terms and conditions to be included in the PDF Invoice and the Invoice emailed to the Customer, tick the Apply Terms option. |
| Notes | Enter any additional Invoice information within the Notes field. |
| Shipping, Discounts and Taxes | Before saving an Invoice, any shipping costs to be included in the grand Invoice total can be entered in the Shipping field. |
| Adjustment | The Adjustment field records Customer discounts and will be subtracted from the final order total. |

NOTE: A flat tax percentage can be added to taxable line Items included on the Invoice. This is a global property that is configured by the system Administrator, in Setup>Billing>Tax Rate, but can be edited if required.

Emailing an Invoice

Once an invoice is created, selecting the Email button will send a copy of the Invoice to:

- The Customer who placed the order
- The system Finance User

- The User who recorded the Invoice
- The Customer who will take delivery, if different to the person who placed the order.

If the system Administrator has enabled the Email Invoice functionality in the application Setup, the Invoice will be emailed automatically to the relevant parties when it is created.

Invoice Status

When an Invoice is first logged in the system it has a status of Pending. A pending Invoice can be edited. However, when an Invoice has been successfully delivered or processed, the Invoice Status moves to Active and it is no longer editable.

| Status | |
|-----------------|---------------------|
| Invoice Status | Pending |
| Delivery Status | Undelivered Process |
| Payment Status | Pending Unpaid |
| Payment Date | |
| Shipping Date | 01/07/16 12:39 |

An Invoice changes to a status of Cancelled when one of the following events occurs:

- Another Invoice is created to supersede the original Invoice; or
- The Invoice was created for a specific Incident and that Incident was deleted/cancelled either manually or due to the Incident Cancel Time, set by the system Administrator, being exceeded. See Setup>Billing within the Administrator Guide.

Editing an Invoice

To amend Invoice details or to include additional Line Items, edit or enter the information prior to selecting the Process hyperlink. This link is not available when the Invoice is in Edit mode, as all Invoice information must be locked down to ensure the application has control of the details of the Items and their delivery.

5.13.5 Invoice Payment & Delivery

Relative to the workings of your support organization, Item and/or Support Contract Invoices may or may not need to be paid before an Item can be delivered to your Customer or Support Contract used by your Customer.

To update the Shipping Date, open the Invoice in Edit mode when the Delivery Status is Undelivered and enter the relevant date within the Shipping Date field.

Processing an Invoice when Payment is Required

For organizations where the option of Payment Required is enabled by the Administrator, a User with Finance access is the only User who can update the Payment Status of an Invoice. To update the Payment Status, the Finance User selects the Payment Received hyperlink of an Invoice to change the status to Paid. Once payment has been made, any other User, such as a Supervisor, can process the Invoice.

Processing an Invoice when Payment is not Required

If the Payment Required option has not been enabled by the system Administrator, a Line Item can be activated in the support system by selecting the Delivery Status Process hyperlink. This means that Customer payment does not need to be received by the organization before the Customer Item is delivered or a support contract is activated in the system.

When the Process hyperlink is clicked, the Invoice Status is updated to Active, and the Delivery Status changes to Delivered. (If the invoice is related to a support contract, the request status is moved from Pending - No Contract to the Workflow default open State, such as Pending.)

| Status | | |
|-----------------|----------------|------------------|
| Invoice Status | Active | |
| Delivery Status | Delivered | |
| Payment Status | Pending Unpaid | Payment Received |
| Payment Date | | |
| Shipping Date | 07/29/10 14:01 | |

5.13.6 Service Level Agreements (SLAs)

| | 습 Home | 🌐 🛞 Operat | ions | [⁄ː] Change | | () Service | ी User | 🗐 Knowledge | 🔄 Reports | E Finance |
|------|---------|---------------------|-----------|--------------|-----------|------------|--------|-------------|-----------|-----------|
| SLAs | OLAs Un | erpinning Contracts | Workflows | Breach Codes | Contracts | | | | | |

Service Level Agreements (SLAs) are used by organizations to manage the levels of service expected of the IT and to ensure optimal maintenance of critical business systems and services. SLAs are documents that are negotiated between the Service Provider and Customer departments, to identify expectations and clarify responsibilities.

This tab is used to create and modify Service Level Agreements that provide request management capabilities.

SLAs include the following elements:

- Name
- Service Level Manager
- Priority Targets
- Automated Alert Notifications
- Pricing (if enabled in Admin>Setup>Billing)
- Blackout Periods
- Workflows.

Details

Creating a Service Level Agreement

To create a new Service Level Agreement:

- 1. Select Service >SLAs
- 2. Click New

The screen defaults to the Details tab of the SLA Editor screen.

| SLA Editor | | | |
|----------------------|-----------------------|-------------------------------------|-------------|
| Details | Targets Blackouts | Workflows | |
| Details | | Internal Costs | |
| Name | | Annual Cost | 0.00 |
| On Breach | cc Team Leader | Request Cost | 0.00 |
| Pause on Holiday | | Hourly Cost | 0.00 |
| Customer Timezone | | Customer Prices | |
| Timezone | (GMT +5:30) New Delhi | Annual Price | 0.00 |
| Requirements | | Request Price | 0.00 |
| Availability | 97.0 % Uptime | Hourly Price | 0.00 |
| Interval Measured in | Days | | |
| SLM | | | |
| Name | | Find Service Level Ma First Name | Email |
| Email | | First Name | Email |
| | | Last Name | Phone |
| | | | |
| | | | 0 |
| | | | Cancel Next |

3. Complete the fields, including any custom fields, as required:

| SLA Editor | | | |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Details | | | |
| Name* | The name to identify the SLA. | | |
| Review Date | Details are completed based on the Admin default settings but can be edited by the User. An Alert is sent based on the default days set in the Review SLA Alert field in Admin>Setup>Privileges>Requests. | | |

4.

| SLA Editor | |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| On Breach | Notification can be set to Carbon Copy (CC) an email to the Team Leader when the Warning or Escalation alert is sent to the Technician assigned to the request. It should be noted that the Service Level Manager is also notified when an SLA is breached. |
| Pause on Holiday | **This option is only displayed if the Observe Public Holidays option has been enabled within the Administrator>Setup>Privileges>User tab. |
| | Enable this option, if the SLA is to be adjusted on designated Public Holidays. The Public Holidays are defined within the Administrator>Setup>Public Holidays screen and associated with requests via the assigned Technician and their associated Country. |
| Customer Timezone | When enabled, SLA times displayed within the Technician request view uses the Customer timezone. |
| Timezone | This is visible when Customer Timezone is not set and all SLA dates are calculated based on the Timezone set within this field. This is especially applicable for User Work Hours, Blackouts, which also impacts the SLA Reports. |
| Requirements | |
| Availability* | Used to state the time an Item under the SLA is required to be online. The default value is set to 97%. |
| Interval Measured in | Defines the number of days over which the Availability requirement is calculated. |
| Priority | |
| Process Name | The field is displayed when Workflows have been assigned to the SLA. |
| | If multiple Workflows have been assigned for each Process, this field allows the User to assign a default Workflow for the SLA. When a request is created using the SLA, the default Workflow is assigned to the request. |
| SLM (Service Level Manager) | |
| Name | Use the Find Service Level Manager search option, |
| Email | to enter the contact details of the Manager who will monitor the performance of the SLA. |
| | This is also the User who is assigned responsibility for managing the performance of external support providers when a request moves into a Workflow State that is supported by an Underpinning Contract |

Internal Cost ^

| SLA Editor | |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Annual Cost ^ | The SLA cost is calculated on the basis of what is costs the service organization to provide the service agreement, as applied on a yearly basis per User. The figure is associated with Items and used to calculate the cost of supplying a Service. This figure can be used as the basis for setting the Annual Price. |
| | The figure entered should be on a Annual Cost per User basis. |
| Request Cost ^ | Indicates the cost applied on a Per Request basis. This figure can be used as a reference for setting the Incident Price. |
| Hourly Cost ^ | Indicates the cost applied on an Hourly basis. This figure can be used as a reference for setting the Hourly Price. |
| Customer Pricing ^ | |
| Annual Price ^ | This is the charge applied to the SLA on a yearly basis and paid by the customer consuming the Service associated with the SLA. (It should be greater than the SLA Cost, as it would include the cost of servicing the SLA plus a profit margin, if relevant.) The figure is associated with Items and used to calculate the price paid by the customer for consuming a Service. |
| | The figure entered should be on a Annual Price per User basis. |
| Request Price ^ | Indicates the price paid by the customer when the SLA is applied on a Per Request basis. |
| Hourly Price ^ | Indicates the price paid by the customer when the SLA is applied on an Hourly basis. |

* Denotes a mandatory field

^ Only applicable when SLA Prices are enabled in Setup>Billing

Targets

The Targets tab is used to configure the SLA's priority Response, Restoration and Resolution Times.

To modify a Priority:

- 1. Select Service > SLAs
- 2. Select an SLA
- 3. Select the Targets tab to display the following fields:

4. _____

SLA Editor

Targets

| SLA Editor | |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Targets | <i>Common</i> : Select Common if the SLA is to apply across Incidents, Requests, Problems and Change Management. |
| | <i>Per Process</i> : If the SLA is specific to a Process, select Per Process and choose a Process displayed in the drop-down list. |
| Interval | Define if the time is to be calculated in Hours or Minutes. |
| Service Time | |
| Priority | Urgent, High, Medium and Low. |
| Milestones | |
| Initial Response | The maximum time the Customer would wait from the point of request creation before receiving a Note update for a Technician. The Response trigger is stopped when a Note has been added to the request by the assigned Technician and an email is sent to the Customer. If the Response Time is reached, without a Note being added, the request will be escalated. |
| Restoration Time | The maximum time the Customer would wait from the time the request was created until a workaround or temporary fix has been implemented. The Restoration trigger stops by assigning the request a Workflow State that has to the SLA Restoration option set to Yes. By default, this Workflow State is Open - Restored. |
| Resolution Time | The taken time from the point of request creation until it the request is moved to a Workflow State with the SLA Resolution option set to Yes. Any of the default Workflow Exit States stop the Resolution Timer. |
| Notify Override | If the system is to override the default notification method set for a request when the Priority being edited is assigned to a request, check this option. |
| Notification Type | Set Email or SMS as the type of notification when the override action is applied to a Priority. |
| Alerts | |
| Reminder | Sends a reminder email to the Technician when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the SLA. Note, Alert intervals are not cumulative. |
| Warning | Sends a warning email to the Technician when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the SLA. |

| SLA Editor | |
|----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Escalation | Escalates the request to a higher escalation layer when the defined percentage of time elapses for a Response, Restoration or Resolution target that has not been met on a request. Can be set up to 200% of the SLA. It should be noted that the Service Level Manager is also notified when an SLA is breached. |
| Support | |
| 24 x 7 | Do not amend if the SLA is to apply 24 hours a day, 7 days a week. |
| Normal Support | Select if service hours are to be defined for the SLA. When checked, define the service hours by either selecting a template (Templates are configured by the Administrator in the Setup>Localization>Hours tab) or manually define the days and time by making selections within the drop-down lists. |

5. Click Edit, if not already in Edit mode

| | | | | | | | Cancel | Next |

- 6. Define if the SLA applies across all Processes or to a specific Process
- 7. Define if the SLA is to be calculated in minutes or hours
- 8. Select the Priority link to customize Milestones, Alerts and Support hours

| SLA Editor | |
|-------------------|----------------------------------------------------------------------------------------|
| Details | Targets Blackouts Workflows |
| Criticality | Support |
| Priority | High |
| Milestones | |
| Initial Response | 12 Hours |
| Restoration Time | 24 Hours |
| Resolution Time | 48 Hours |
| Notify Override | |
| Notification Type | None 🔻 |
| Alerts | |
| | Warning @ % Reminder Save Warning Escalation Cancel Save |

9. Modify the Milestone intervals for the Response Time, Restoration Time and Resolution Time, as required

NOTE: The time will be set in minutes or hours, as defined for the SLA.

Milestone intervals are not cumulative

For example, for the default Warranty SLA, the Priority of Urgent has the default Milestone times of 6, 12 and 24 hours. This means a User has 6 hours to send a response to a Customer before the Response time is breached, 12 hours from the point of request creation to meet the Restoration time, and 24 hours from the point of request creation to meet the Resolution time. It should be noted that requests may be moved to non-SLA timed States during these Milestone periods, so the 12 or 24 hours may not be consecutive hours.

10. Check the Notify Override option, if relevant

Set the type of notification, email or SMS, that is to be used to contact the User assigned to the request with this Priority.

11. Create one or multiple Reminder, Warning or Escalation Alerts, if relevant

NOTE: Enter the percentage of time to elapse for an Alert to be triggered for a Milestone. Selecting Warning as the Alert will cause a warning e-mail to be sent to the request's Technician when the specified percentage of a milestone has been reached.

Selecting Escalation will trigger a request escalation to the next support layer of the Team. The escalation system will also fire if the SLA threshold is breached.

It is recommended that reminders be sent at 50% of elapsed time and escalations at 75-80%

These figures are advisory only. The internal processes of your organization will dictate the appropriate values. The Reminder percentage must be less than the Warning or Escalation percentages.

Alerts can be set to 200% of the SLA time, which ensures notifications can be still be received against breached requests

If Alerts are not customized, the application will automatically escalate the request when the Priority milestone is breached

- 12. Click Save
- 13. Modify other Priorities as necessary.

Configuring Support Hours

After the Priority times and Alerts of an SLA have been configured, Support Hours can be defined. These can be set to 24 hours by 7 days a week (24 X 7), or manually adjusted to reflect the support operation open hours.

Under 24 X 7 mode, if the SLA's urgent Initial Response field is set to six hours, and an urgent request that uses the SLA is created at midnight in the assigned Technician's time zone, those six hours will expire by 6:00 AM. This is the option to use if a support operation is staffed 24 hours a day.

If a support operation is not open 24 hours a day, the request timers are not required to run when Technicians are not available. For instance, if the support hours are 9:00 AM to 5:00 PM and the SLA hours reflect this, the SLA timers of the urgent request created at midnight would not start ticking until 9:00 AM the following business day and would expire at 3:00 PM.

To define the SLA support hours:

- 1. Select Service > SLAs
- 2. Select an SLA
- 3. Click the Priority link

This will display the Details tab with Support Hours options of 24x7 and Normal

4. The default setting is 24 X 7, to amend the support hours select the Normal Support option

| SLA Editor | | | | | | | |

- 5. Select a template from the Apply Template drop-down options or customize Weekdays manually. Note that the SLA timers become inactive when the support desk is closed.
- 6. Click Save.

Blackouts

Blackouts are used as part of Change and Configuration Management to advise Users about the appropriate periods of time that an Item associated with an SLA should be scheduled to be taken offline if an Outage is needed. Within the system, when an Outage is being scheduled (Item>Details>Outages) the Blackout period is displayed, informing the User of the best time to schedule a Planned Outage.

A Blackout Period is based on an agreement between the Customer and the Service Desk regarding set times that the Customer has no service expectations. This can also be the preferred time for Item upgrades and maintenance as they will not affect service availability.

A Blackout Period is specified within an SLA. During this time the SLA is viewed as inactive and its measuring time is stopped. OLAs that underpin a Workflow State that apply an SLA with a Blackout Period, also adopt the Blackout Period.

Specifying an SLA Blackout

To specify an SLA Blackout:

- 1. Select Service >SLAs
- 2. Click an SLA hyperlink
- 3. Click Edit
- 4. Move to the Blackouts tab
- 5. Tick the Windows option

| SLA Editor | | | | | | |
|------------|---|---------|--------------|----------|----------|------|
| Details | 5 | Targets | Blackouts | Workf | flows | |
| Blackouts | | | | | | |

6. Click Remove.

Workflows

Workflows are associated with an SLA through the Workflows tab of the SLA Editor screen or within the Workflow itself. All SLAs assigned to the SLA are listed within this tab and Workflows can be added or removed within this tab, as required.

Assigning a Workflow

To assign a Workflow:

- 1. Select Service>SLAs
- 2. Click the relevant SLA link
- 3. Move to the Workflows tab
- 4. Click Edit
- 5. Select Add

The Available Workflow drop-down list will be displayed.

| SLA E | Editor | | |
|-------|------------------|---------------------------------------------------------|--------------------------------------------------|

| Avai | lable Workflows | • | Cancel Save |
| 🖾 Na | ame | Typical Change Workflow Standard Change Workflow | Description |
| St | tandard Change V | Service Request Workflow Problem Workflow | Configurable Standard Change Management workflow |
| | | Incident Workflow IWFlow | - 1 of 1 Results |
| | | Emergency Change Workflow Change Deployment Workflow | |

- 6. Select a Workflow
- 7. Click Save.

To remove a Workflow assignment, use the checkbox next to the relevant Workflow and click the Remove button.

Default Warranty SLA

The system includes a default SLA that does not include costs, called Warranty. The Warranty SLA can be used or edited as required.

Integration with Request Creation and the Billing System

The prices specified in the SLA provide the basis for fees charged for support on both a Per Request basis and on a subscription basis. The hourly rate is included for reporting purposes. Rather than an Item using an SLA, Items can be covered by maintenance contracts. A contract can cover a particular request, or exist as a subscription.

Maintenance Contracts form part of the request creation process. Requests can be entered into the system without a valid contract, but are flagged as unpaid, and are unable to be worked on until the invoice is processed. There is also a control (configured in the Billing Preferences) for the length of time an unpaid request can exist in the system.

See: Assigning an SLA to a Customer

See: Assigning an SLA to an Organizational Unit when Contracts are Disabled

Assigning a Default Workflow to an SLA

If more than one process Workflow is assigned to an SLA, it is required to select a default Workflow. This default Workflow will be the Workflow assigned to a request when the SLA assigned supports more than one Workflow.

To assign a Default Workflow:

- 1. Select an SLA from the Service > SLA tab
- 2. Click Edit

Note that the system automatically assigns a default Workflow to an SLA, as Workflows are being assigned.

3. Within the Priority Field, use the drop-down lists to update the relevant Incident, Problem, Change and Service Request default Workflows

| Priority | | |
|----------|-------------------------------------------------------|---|
| Request | Service Request Workflow | - |
| Change | Standard Change Workflow | - |
| SLM | Emergency Change Workflow Standard Change Workflow | |

4. Click Save to apply the change.

5.13.7 Outages

An Outage is when an Item Status is unavailable due to expected or unexpected events. For example, the Item may be out for repair or faulty. To move an Item into an unavailable State, and therefore list it as inactive, the Item Status selected for the Active State option within the Item Category Lifecycle must be set to No, and the Offline State option set to Yes.

Planned Outages

Planned Outages are used to manage Items' proposed unavailability. This is useful for informing Customers and Users about planned changes to infrastructure that may cause an Item to be taken offline or out of service.

If an Item has an SLA with a specified Blackout Period, ideally Outages should be planned to fall within this time. The Blackout Period is an agreement between the Customer and the service provider regarding a period of time when the Customer has no service expectations. This can also be the preferred time for Item upgrades and maintenance without affecting service availability. To access the Blackout Period details for an SLA associated with an Item, create the Planned Outage within the Outages tab of the Item Information screen.

Creating a Planned Outage

To create an Outage:

- 1. Select Configuration > Outages
- 2. Click New

| Planned Outages | |
|-----------------|-------------|
| Details | |
| Interval | One Time |
| Start Date | |
| End Date | |
| Notification | None 💌 |
| Reason | |
| | |
| | |

| | Cancel Save |

| Planned Outages | |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Details | Description |
| Interval | Select One Time if the Outage is a one off, or set regular outages based on a weekly or monthly basis. |
| Start Date | Select the Start Date within the calendar, and modify the Time accordingly inside the calendar pop-up. |
| End Date | Select the End Date within the calendar, and modi the Time accordingly inside the calendar pop-up. |
| Notification | Select Email or SMS Notification about the Outag is to be sent to the Primary Contact of the Org. Un or All Customers/Owners associated with the Item |
| Reminder | This option is displayed when a Notification is set for the Outage. |
| | If a Reminder notification is to be applied to the Outage, check the box and define the period of tim prior to the Planned Outage period that the reminder is to be issued. |
| Reason | Enter a description that details why a Planned Outage is being scheduled. |

4. Define the Interval for the Outage

The options of One Time, Weekly and Monthly are available.

- 5. Set the Outage Start and End dates
- 6. Set the Notification method and recipients

These are applied when the Outage is saved.

7. Tick the Reminder Email field

If a reminder is to be emailed to defined recipients prior to the Outage time. Define the length of time before the Outage occurs that the reminder is to be sent.

| Notification | Email 💌 | Primary Contacts |
|--------------|----------|------------------|
| Reminder | 24 hours | ▼ before outage. |

- 8. Enter the Reason for the Outage
- 9. Click Save

The add Items option is displayed.

| Items | • | 9 | | | | |
|-------|---|----------------|--------|--------------------|--------|---|
| | ⊠ | ltem Number | 🛓 Туре | Identifier | Status | ■ |
| | | | | 0 - 0 of 0 Results | | |

10. Click 🔂

The Find Item/Item Type field is displayed.

- 11. Enter the known Item Number or Type and click 🔍
- 12. Click the Item Number hyperlink to add the Item to the Outage

| Planned Outages | |
|-----------------|-------------|
| Item | 0 |
| Item Number | 1000010 |
| Item Type | lphone 6 |
| Offline Status | Offline 💌 |
| Online Status | Available 💌 |
| | Cancel Save |

13. Define the Offline Status and Online Status for the Item

These are the States the Item will be automatically assigned in the CMDB when the Planned Outage commences and ends.

14. Click Save

Repeat Steps 9 to 12 to add more than one Item to the Outage. Click to remove Item details from the Outage.

15. Click Save and Done.

The Outage details are visible in the Planned Outage page, if the Criticality of the Item is equal to or greater than the Minimum Criticality set by the Administrator within the Setup>Privileges>System tab.

Viewing Outages

Planned Outages can be viewed from the Login Page and the Customer Portal, if the Administrator has toggled the Setup>Privileges>System Outages Page option to Yes. This enables the Planned and Unplanned Outage links in the Customer Portal and Login Page.

Customer Portal View

In the Customer Portal the Planned Outages information is accessible in the side bar menu of the Items and Services tab.

| Menu | | |

Planned Outage Page Options

· Search for Outages based on the Item Type

This functionality is enabled by the Administrator in Setup>Privileges>System Search Outages.

 Within the Outage Details window, click on the Item Number link to show the Item Relationship Map

To enable this feature, the Show Affected Relationships option must be activated by the Administrator in Setup>Privileges>System Outages.

• To return to the Planned Outage list, click the Done.

5.13.8 Purchase Orders

Purchase Orders can simplify the tracking of where and when new Items are purchased or leased. This feature is not meant to replace an organization's original PO system, it is designed to easily link a specific PO number (and its associated vendor and date information) with an Item.

Enabling Purchase Orders

To enable Purchase Orders:

- 1. Select Setup>Billing
- 2. Set the option Enable Purchase Orders to Yes

| Billing | |
|-----------------------------------|----------------------|
| Setup | Contracts |
| Billing Module | |
| Enable Purchase Orders | Yes No |
| Enable Contracts | Yes No |
| Enable Invoices | Yes No |
| Display SLA Prices | Yes No |
| Tax Rate (Percentage) | |
| Email Notifications | Enabled Disabled |
| Purchase Order Company Details | |
| Details | |
| | łı. |
| Global Settings | |
| Currency | United States Dollar |
| | Save |

3. Set the default tax rate

The percentage amount entered here is applied by default to all POs.

- 4. Enter the Company Details to be used on the PO
- 5. In Global Settings, select the preferred currency
- 6. Click Save.

NOTE: A logo can be applied to system generated POs by adding the graphic within the Setup>Customize tab. (This option is only displayed when the Purchase Orders functionality is enabled within the Setup>Billing tab.)

The Purchase Order sub-menu option is made available within the Finance tab for Finance, Supervisor and Technician Users, when enabled.

5.13.9 Contracts

A Contract is made up of a Service Level Agreement (SLA) and a Service Delivery Period (start and end time). They can be used to manage an entitlement to service from a start date, through to an end date.

Contracts and Invoices are used together when the Service Desk needs to charge its Customers for any support provided. Billing within the system is on a per Contract basis, and is enabled automatically when Invoices are activated.

Contracts can be created for different elements to suit organizational needs. Contracts can cover the individual elements:

- Items
- Customers
- Organizational Units
- Requests.

Pending Contracts are contracts that have a start date set in the future. They automatically become active on the contract start date or can be enabled manually.

Enabling Contracts

To enable a Contract:

- 1. Select Setup>Billing
- 2. Click Yes to enable Contracts

A Contracts tab will be visible.

| Billing |
|--------------------------------------|
| Setup Contracts |
| Billing Module |
| Enable Purchase Orders Yes No |
| Enable Contracts Yes No |
| Enable Invoices Yes No |
| Display SLA Prices Yes No |
| Email Notifications Enabled Disabled |
| Global Settings |
| Currency United States Dollar |
| Save |

3. Define the Email Notifications option for Finance Users

When enabled, automated emails are sent to Finance Users regarding matters relating to POs, Invoices and/or Contracts.

4. Set the Currency for all financial transactions managed by the system

5. Move to the Contracts tab to define parameters for

| Billing | |
|---------------------------|--------------------------------|

Description

6.

Options

| Subscription | |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Contract Renewal Time | The system can automatically send a Contract Renewal Invoice before a contract expires. Enter the number of days prior to the contract expiration date for the system to send the renewal invoice. |
| | For Contracts not to be automatically created, leave this field blank. |
| | (The information for the invoice can be configured in the InvoiceSummary link within the Setup>Email>Templates>Email Summary Templates filter screen. This template is sent with the InvoicePrefix email that can be edited in Setup>Email>Templates>Full Email Templates list.) |
| Default Contract Duration | The system sets the default contract renewal period to 12 months, adjust or delete the entry as required. |
| Time | |
| Low Time Alert | The system can automatically create an alert within the Customer Portal for customers that have Time- based contracts (i.e., purchased a quantity of support hours.) The Alert can be sent based on the percentage of hours that have been used. |
| Low Time Email | The system can automatically send an email to a Customer that is getting close to using all their support hours in their Time-based contracts. The Email can be sent based on the percentage of hours that have been used. |
| | The Email content is set in the ContractTimeLow option of Setup>Email>Templates. |

| Options | Description |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Expiration | |
| Time Expired | When a Customer's contract is expired when a User is working on a request, this option specifies if the User can Complete the request although the Contract has expired and if the system will lock out the User until the Customer has purchased additional time. |
| | When Complete Request is selected, the following options are displayed: |
| | Rollover - means the time used to resolve the issue will be subtracted from the Customer's renewed contract. |
| | Ignore - means the time used to resolve the issue, although the Customer contract has expired, is not allocated to a future contract. |
| | (The subject line and content for the automated emails sent on contract expiration is configured in the ContractTimeElapsed and ContractTimeElapsed of Setup>Email>Templates.) |

7. Enter the Contract Renewal Time, if required

For contracts not to be automatically created, leave this field blank.

- 8. Set Notifications and Thresholds
- 9. Set Time Expired option

| Expiration | | | |
|--------------|----------|---------|---------------|
| Time Expired | Complete | Request | Purchase Time |
| Overtime | Rollover | Ignore |) |

10. Click Save.

5.13.10 Invoices

Invoices are used for the billing of Contracts and can also be used for Purchase Orders. When Invoices are enabled, Contracts are enabled automatically. Invoices can be used to maintain the purchasing of Items as well as Contracts for these and existing Items.

Enabling Contracts and Invoices

When an Invoice is created, a Contract is automatically generated.

To enable Invoices:

- 1. Select Setup>Billing
- 2. Click Yes to enable Invoices

When an Invoice is enabled, the following options become

| etup | | | |

| | Enter the Company details to be displayed on Purchase Orders. |
| Currency | Select the currency for all financial transactions within the system. |

*Denotes mandatory field.

- 1. Enable the Payment Required and Email Notification options, if necessary
- 2. Complete all the necessary fields
- 3. Select preferred currency
- 4. Click Save.

5.14 AMIE

The Asset Management Import Engine (AMIE) integrates with the following Inventory Management Products:

- Absolute Manage 6.0
- Centennial Discovery 2005, 9
- Express Software Manager 9.0, 9.5

- HP Universal CMDB 8.0
- LANDesk 8.5, 9.0, 9.0 (Hardware)
- LANrev 5.1
- LiveTime Discovery 2005, 2007
- LOGINventory 4.3
- Manage Engine Desktop Central 7.0
- Microsoft SMS Version 2003 SP1
- Microsoft SCCM 2007
- Spiceworks 4.0, 5.0
- ZENworks Asset Management 6.5+
- ZENworks Configuration Management 11.1, 11.1 (Hardware).

This section includes the following:

- Section 5.14.1, "AMIE Mappings for Servers," on page 533
- Section 5.14.2, "AMIE Customized Mapping," on page 548
- Section 5.14.3, "Managing Items using Database Mapping (AMIE)," on page 563
- Section 5.14.4, "Importing Items using a .CSV File," on page 570
- Section 5.14.5, "Downloading an Item .CSV Template," on page 578
- Section 5.14.6, "Financial Management," on page 586
- Section 5.14.7, "Service Portfolio Management," on page 586
- Section 5.14.8, "Financial Management Applied," on page 591

5.14.1 AMIE Mappings for Servers

The default AMIE mappings for each server type are as follows:

Absolute Manage 6.0

| ITEM CATEGORY | Hardware |
|----------------|-----------------------------------|
| FIELD1 = "CPU" | |
| FIELD | "field1" |

5.14.2 AMIE Customized Mapping

The customized mapping functionality provides the Administrator with greater control over the Item Types and Categories information accessed during the Item import process. It allows the Administrator to customize queries by defining parameters for importing Items.

IMPORTANT: As a prerequisite the Administrator should have knowledge of HQL and schema of the source database.

Export Configuration

Prior to importing Items, to define the parameters of the Items to be imported, the Item parameters must be exported to a file. To export the parameters file:

- 1. Log in as an Administrator
- 2. Select Setup > Item Import > Customize

| AMIE | | | | |
|------|-----------|----------------------|---------|---|
| | Setup | Import Cust | stomize | _ |
| | Mapping | | | _ |
| | Operation | Export Configuration | | |
| | Server | | | |
| | Туре | Absolute Manage v6.0 | • | |
| | | | Export | |

- 3. From the Mapping Operation drop-down list, select Export Configuration
- 4. Select the Server Type for the configuration export
- 5. Click Export.

An .xml file is produced.

Customizing the XML File

To customize the Item import, the above exported configuration file will need to be modified. To modify the file:

- 1. In the text editor of your choice, open the XML file
- 2. Modify the properties as required.

The example below explains how the ZENworks Configuration Management 11.1+ (ZENworksCM 11.1.xml) configuration can be customized.

<IMPORT_DEFN> Element

The first line within the XML file displays the following fields:

```
<IMPORT_DEFN SERVER="ZENworks Configuration Management" VERSION="11.1+"
AUTHOR="Micro Focus">
```

They identify an entry for an Asset Management Server type. By modifying these fields, we can effectively create another configuration.

<IMPORT_DEFN SERVER="ZENworks Configuration Management" VERSION="11.1+" AUTHOR="Bob">

This newly configured name will be the Server Type listed as an option when setting up AMIE.

| Attributes | | | |
|------------|----------------|---------------------------------------|--|
| Name | Туре | Description | |
| SERVER | String | Name of Asset Management Server | |
| VERSION | String | Version of Asset Management Server | |
| AUTHOR | String | Author of the XML | |
| | Child Elements | | |
| Name | Occurrence | Description | |
| CONDITIONS | [01] | | |
| ITEM | [1*] | | |
| SCHEMA | [01] | | |

<CONDITIONS> Element

To support multiple versions of AMIE source with a single XML driver:

<CONDITIONS>

<QUERY NAME="versionQuery">SELECT zDevice FROM com.livetime.assetimport.ZDEVICE zDevice WHERE zDevice.PROPAGENTVERSION = (SELECT MAX(zDevice1.PROPAGENTVERSION) FROM com.livetime.assetimport.ZDEVICE zDevice1) </QUERY>

<CONDITION NAME="version113" QUERYVALUE="versionQuery.PROPAGENTVERSION" CONDVALUE="11.3" VALUETYPE="NUMERIC" COND="EGREATER" TYPE="LOOKUP" />

<CONDITION NAME="version112" QUERYVALUE="versionQuery.PROPAGENTVERSION" CONDVALUE="11.3" VALUETYPE="NUMERIC" COND="LESSER" TYPE="LOOKUP" />

</CONDITIONS>

| Child Elements | | | |
|----------------|------------|-------------|--|
| Name | Occurrence | Description | |
| QUERY | [0*] | | |
| CONDITION | [0*] | | |

<QUERY> Element

Define the 'Query' property to locate the table data.

For example, the query below will retrieve the ZENworks version data. The Query Name (versionQuery) is used to reference the property field as described later.

<QUERY NAME="versionQuery">SELECT zDevice FROM com.livetime.assetimport.ZDEVICE zDevice WHERE zDevice.PROPAGENTVERSION = (SELECT MAX(zDevice1.PROPAGENTVERSION) FROM com.livetime.assetimport.ZDEVICE zDevice1) </QUERY>

| Attributes | | |
|------------|--------|-------------|
| Name | Туре | Description |
| NAME | String | |
| CONDITION | String | |

<CONDITION> Element

Get the actual condition value from the <QUERY> written for the <CONDITIONS>

<CONDITION NAME="version113" QUERYVALUE="versionQuery.PROPAGENTVERSION"
CONDVALUE="11.3" VALUETYPE="NUMERIC" COND="EGREATER" TYPE="LOOKUP" />

| Attributes | | | |
|------------|--------------------|-----------------------------------------------------------------------------------------------------------------|--|
| Name | Туре | Description | |
| Name | String | Name of condition, to be used later in different elements. | |
| QUERYVALUE | String | Value as returned from the query. | |
| CONDVALUE | String | Condition value to be compared using condition defined with 'COND' with value returned from the query. | |
| VALUETYPE | ConditionValueType | Valid value types are; NUMERIC and STRING | |
| COND | ConditionType | GValid value types are; REATER, LESSER, EGREATER, ELESSER, and EQUAL | |
| TYPE | LookupType | "LOOKUP" - retrieves the data from the VALUE attribute as specified using the query.property notation. | |
| | | "QUOTED" - treats the VALUE attribute as a hard-coded value. | |

<ITEM> Element

The configuration mapping file is divided into "blocks" of Item Categories. In each block, we define a number of instructions to execute during AMIE's import process.

Example1:

<ITEM CATEGORY="Hardware" ID_KEY_FORMAT="NC_Workstation.ZenWorksAgentId">

Example 2:

Defining the block based upon the condition retrieved from <CONDITION> Element

```
<ITEM CATEGORY="Software" ID_KEY_FORMAT="NC_SoftwareComp.ComponentOID"
CONDITION="version113">".
```

"ITEM CATEGORY" instructs AMIE to import all items within the defined XML block, as generic "Hardware". If you want to be more specific about import for Hardware, you can break down into subcategories. For example, "Computer", "Printer", and "Network Peripheral".

Assuming the selected Asset Management Server supports the inventory control of these individual categories, defining an XML block for each category would allow the Administrator to import each Hardware Item as a "Computer, "Printer" or "Network Peripheral".

| Attributes | | |
|---------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name | Туре | Description |
| CATEGORY | String | Specifies the category of the Items getting imported. This category must exist in Service Desk prior to import. |
| DEFAULT_STATE | String | Default state of item to be imported. Refer to the Item life-cycle in Service Desk. |
| SCHEMA | String | |
| ID_KEY_FORMAT | String | |
| CONDITION | String | To illustrate the format of the primary key field for this category in the Asset Management database. In the example, "NC_Workstation.ZenWorksAge ntId" says that the "ZenWorksAgentId" column of the "NC_Workstation" table will contain the primary key for hardware. |

| Child Elements | | | |
|----------------|------------|-------------|--|
| Name | Occurrence | Description | |
| ASSET_ID_LIST | [01] | | |
| RELATIONSHIP | [0*] | | |
| QUERY | [0*] | | |
| OWNERSHIP | [01] | | |
| ITEM_TEAMS | [01] | | |
| ITEM_TYPE | | | |
| ITEM_PROPERTY | [0*] | | |

<asset_ID_LIST> Element

To get initial list of primary key of the assets to be imported. <QUERY> element will be called for each retrieved entries from this element and PARAM_NAME will be used in <QUERY> element while defining the query conditions.

For example,

<ASSET_ID_LIST PARAM_NAME="ASSETID" HEX_KEY="TRUE">
<SELECT>SELECT ncWorkstation.ZDEVICE.PROPZUID</SELECT>

<FROM>FROM com.livetime.assetimport.NCWORKSTATION ncWorkstation</FROM>

<WHERE>ncWorkstation.PROPMACHINENAME != 'Lost and Found' and ncWorkstation.PROPISDELETED is null</WHERE>

<SORT1 ASCENDING="true">PROPWORKSTATIONOID</SORT1>

<ALIAS>ncWorkstation</ALIAS>

| Attributes | | |
|------------|--------|-------------------------------------------------------------------------------------------------------------------|
| Name | Туре | Description |
| PARAM_NAME | String | A name for the primary key. This will be used in the query written under query element. |
| HEX_KEY | String | Specifies whether primary key is of Hexadecimal format. Valid values are 'TRUE' and 'FALSE' |
| CONDITION | String | Whether the query has to be executed on certain condition as defined from the Condition element earlier. |

| Child Occurrence | | |
|------------------|------------|-------------------------------------|
| Name | Occurrence | Description |
| SELECT | | "SELECT" clause of the query |
| FROM | | "FROM" clause of the query |
| WHERE | [01] | "WHERE" clause of the query |
| SORT1 | [01] | Sort based on column |
| SORT2 | [01] | Sort based on column |
| SORT3 | [01] | Sort based on column |
| ALIAS | | "ALIAS" if used for the FROM clause |
| SQLCOUNT | [01] | SQL query for count |

<Sort1>,<Sort2>,<Sort3> Element

| Attributes | | |
|------------|---------|----------------|
| Name | Туре | Description |
| ASCENDING | boolean | 'true/'f'alse' |

<RELATIONSHIP> Element

When defining multiple Item Category types to import, for example Hardware and Software, an Administrator can specify how they are related. Configuring these properties will allow Items to be imported with predefined relationships.

IMPORTANT: Ensure that only children element should contain the relationship information as relationships are defined from the bottom to top.

For example, Software to Hardware Relationship block

```
<RELATIONSHIP RELATED_TO="Hardware" TO="is a parent of" NAME="Parent of / Child of
(Inherit Owner)" FROM="is a child of" CLASS="1000" INHERIT OWNERSHIP="1">
```

<NATIVE_ID_QUERY>SELECT software.NCWORKSTATION.ZDEVICE.PROPZUID FROM com.livetime.assetimport.NCSOFTWARECOMP software WHERE software.PROPCOMPONENTOID = :SW ASSETID</NATIVE_ID_QUERY>

</RELATIONSHIP>

This "Parent of/Child of" relationship already exists as one of the factory supplied relationship types. However any newly defined relationships can be mapped and created as part of the import process.

| Attributes | | |
|-------------------|--------|-----------------------------------------------------------------------------------------------------------------------------|
| Name | Туре | Description |
| RELATED_TO | String | The Item Category another Item Category can relate to. For example "Software" is to be related to "Hardware". |
| NAME | String | The name of the relationship. |
| FROM | String | A label describing the relationship from the child to the parent. For example: [Software] is a child of [Hardware] |
| CLASS | String | 1000=Hierarchical-based relationship. |
| | | 2000=Connection-based relationship. |
| INHERIT_OWNERSHIP | 0 or 1 | 0=No (Relationship does not inherit parent ownership data.) |
| | | 1=Yes (Propagates ownership data (customer and organizational unit) from each parent Item to all of its children.) |

| Child Elements | | | |
|-----------------|------------|-------------|--|
| Name | Occurrence | Description | |
| NATIVE_ID_QUERY | String | | |

<QUERY> Element

Define the 'Query' property to locate the table data.

For example, the query below will retrieve the data for Hardware. The Query Name is used to reference the property field in the child elements.

Example 1:

```
<QUERY NAME="wsQuery">SELECT ncWorkstation FROM
com.livetime.assetimport.NCWORKSTATION ncWorkstation WHERE
ncWorkstation.ZDEVICE.PROPZUID = :ASSETID</QUERY>
```

Example 2:

<QUERY NAME="query1" CONDITION="version113"> SELECT ncProduct FROM com.livetime.assetimport.NCWORKSTATION ncWorkstation, com.livetime.assetimport.NCSYSTEMCOMP ncComponent, com.livetime.assetimport.NCPRODUCT ncProduct WHERE ncWorkstation.ZDEVICE.PROPZUID = :ASSETID and ncWorkstation = ncComponent.NCWORKSTATION and ncComponent.NCPRODUCTByProductoid = ncProduct and ncComponent.PROPPRODUCTTYPE = 22 and ncComponent.PROPISDELETED is null and ncProduct.PROPISDELETED is null</QUERY>

| | Attributes | |
|-----------|------------|-------------|
| NAME | Туре | Description |
| CONDITION | String | |

<OWNERSHIP> Element

Optional element to define the ownership of the assets.

For example,

<OWNERSHIP>

```
<CUSTOMER FIELD="userName" VALUE="wsQuery.PROPLOGINNAME" TYPE="LOOKUP" />
```

```
<ORG UNIT FIELD="displayString" VALUE="wsQuery.PROPDEPT" TYPE="LOOKUP" />
```

</OWNERSHIP>

| Child Elements | | | |
|----------------|------------|-------------|--|
| Name | Occurrence | Description | |
| CUSTOMER | [01] | | |
| | [01] | | |

<CUSTOMER> / <ORG_UNIT> Element

| Attributes | | |
|------------|------------|----------------|
| Name | Туре | Description |
| FIELD | String | |
| VALUE | String | |
| TYPE | LookupType | LOOKUP, QUOTED |

<ITEM_TEAMS> Element

Optional element to define field to define teams for the imported assets. Team can be assigned by either Team Name or Team ID as defined in Service desk.

| Child Elements | | | |
|----------------|------------|-------------|--|
| Name | Occurrence | Description | |
| INCIDENT_TEAM | [01] | | |
| REQUEST_TEAM | [01] | | |
| PROBLEM_TEAM | [01] | | |
| CHANGE_TEAM | [01] | | |
| CHANGE_TEAM | [01] | | |

<INCIDENT_TEAM> / < REQUEST_TEAM> / < PROBLEM_TEAM> / <CHANGE_TEAM> Element

Optional element to define field to define teams for the imported assets. Team can be assigned by either Team Name or Team ID as defined in Service desk.

| Child Elements | | | |
|-----------------------------|--------|--|--|
| Name Occurrence Description | | | |
| TEAM_NAME | String | | |
| TEAM_ID | String | | |

<ITEM_TYPE> Element

Defines asset's item type and manufacturer. Based upon the value existing/new item type and manufacturer will be used/created.

For Example:

<ITEM_TYPE>

<MANUFACTURER>

<MANUFACTURER_PROPERTY FIELD="fullName" VALUE="query1.PROPMANUFACTURER"
TYPE="LOOKUP" />

```
<MANUFACTURER_PROPERTY FIELD="name" VALUE="query1.PROPMANUFACTURER"
TYPE="LOOKUP" />
```

</MANUFACTURER>

```
<ITEM_TYPE_PROPERTY FIELD="itemTypeName" VALUE="query1.PROPPRODUCT"
TYPE="LOOKUP" />
```

</ITEM TYPE>

| Child Elements | | | |
|--------------------|------------|-------------|--|
| Name | Occurrence | Description | |
| MANUFACTURER | | | |
| ITEM_TYPE_PROPERTY | [1*] | | |
| EXCLUSIONS | [01] | | |

<MANUFACTURER> Element

| Child Elements | | | |
|-----------------------|------------|-------------|--|
| Name | Occurrence | Description | |
| MANUFACTURER_PROPERTY | [1*] | | |

<MANUFACTURER_PROPERTY> Element

| Attributes | | |
|------------|------------|----------------|
| Name | Туре | Description |
| FIELD | String | |
| VALUE | String | |
| TYPE | LookupType | LOOKUP, QUOTED |

<ITEM_TYPE_PROPERTY> Element

| Attributes | | |
|------------|------------|----------------|
| Name | Туре | Description |
| FIELD | String | |
| VALUE | String | |
| TYPE | LookupType | LOOKUP, QUOTED |

<EXCLUSIONS> Element

| Child Elements | | | |
|----------------|------------|-------------|--|
| Name | Occurrence | Description | |
| CONTAINS | [0*] | String | |
| ABSOLUTE | [0*] | String | |

<ITEM_PROPERTY> Element

Define the 'Item Property' to extract column data for the above Query.

Each of these entries maps an Item property, from the Asset Management Server to the service management system. For example, the value in the SerialNumber field of the Asset Management Server will be mapped to the Serial Number (field10) field of the service desk database.

| Attributes | | |
|--------------|--------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name | Туре | Description |
| FIELD | String | This is the name of the field that exists in the system database. The field "field10" for the "Hardware" Item Category maps to the "Serial Number" field. |
| | | For a current Entity- Relationship Diagram that includes these database fields, please contact your local support contact. |
| VALUE_PREFIX | String | This will prefix the actual value returned from the Asset Management Server database. |

| Attributes | | |
|--------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name | Туре | Description |
| VALUE | String | This value can either be a hard- coded value, or a value the Administrator wants to import from the Asset Management Server database (see: TYPE attribute below) |
| | | For the latter, we define a string using the query.property notation, which will reference the actual value in the database. |
| | | In our example, our VALUE attribute is "wsQuery.PROPSERIALNUMBER ". |
| | | "wsQuery" - the query name where our results are contained, the "Hardware" table. |
| | | "PROPSERIALNUMBER" - the property name, where the actual cpu value is stored, the "SIZE" column. |
| | | In most cases, the property name is identical to the database column name, with the first letter capitalized followed by lower-case. Property names are always pre-appended with the word "prop", to ensure uniqueness in the import process. |
| | | Take this into consideration when defining custom properties. |
| VALUE_SUFFIX | String | This will suffix the actual value returned from the Asset Management Server database. |
| ТҮРЕ | LookupType | "LOOKUP" - retrieves the data from the VALUE attribute as specified using the query.property notation. |
| | | "QUOTED" - treats the VALUE attribute as a hard-coded value. |

<ITEM_PROPERTY FIELD="field10" VALUE_PREFIX="" VALUE="wsQuery.PROPSERIALNUMBER"
VALUE_SUFFIX="" TYPE="LOOKUP"/>

<SCHEMA> Element

Choose either <DROP> or <INCLUDE> to exclude unnecessary or to include only required.

Example 1: Using <DROP> to exclude unnecessary tables.

```
<SCHEMA>
```

Child Elements Name Occurrence Description DROP INCLUDE

<DROP>/<INCLUDE> Element

| | Child Elements | | |
|----------------------|----------------|-------------|--|
| Name | Occurrence | Description | |
| RELATIONSHIP_MAPPING | [0*] | | |
| MAPPING_FILE | [0*] | | |

<RELATIONSHIP_MAPPING>

| | Attributes | | |
|------|------------|-------------|--|
| Name | Туре | Description | |
| NAME | String | | |

<MAPPING_FILE>Element

| Attributes | | | |
|------------|--------|-------------|--|
| Name | Туре | Description | |
| NAME | String | | |

Upload / Edit the XML Configuration

Once the XML has been customized it needs to be imported back into the system to enable the application to import Items using the new specifications.

To import the XML:

- 1. Log in as an Administrator
- 2. Select Setup > Item Import > Customize
- 3. From the Mapping Operation drop-down list, select Upload/Edit Configuration

| AMIE | |
|-----------|---------------------------|
| Setup | Import Customize |
| New | |
| Mapping | |
| Operation | Upload/Edit Configuration |
| Server | |
| Туре | [New Configuration] |
| | |

- 4. Select [New Configuration] in the Type list
- 5. Click New
- 6. Select Choose File
- 7. Search and upload the XML file

| AMIE | |
|---------------------|---------------------------|
| Setup | Import Customize |
| Mapping | |
| Operation | Upload/Edit Configuration |
| Server | |
| | [New Configuration] |
| Configuration | |
| Mapping File | Browse user_details.xml |
| Connection Defaults | |
| Database Type | Ingres |
| Database Name | |
| Username | |
| Password | |
| Schema | |
| Catalog | |
| | Cancel Import |

8. Enter Connection Default values for the database type, name, username, password, schema and catalog, if necessary

These will be the pre-set values when selecting and mapping the new Server Type.

9. Click Import button to import the XML file

When the import is complete, the new configuration file will appear as a new Server Type.

- 10. The Server Connection Details can be modified or updated by clicking Edit and making the required changes
- 11. Click Save.

Using the customized Server Type

Once a new Server configuration has been imported into the system, it can be selected as an option when configuring AMIE in the Setup tab.

To use the new Server Type:

- 1. Log in as an Administrator
- 2. Select Setup > Item Import > Setup
- 3. Select the System Type as Database Mapping (AMIE)
- 4. From the Server Type list select the customized server

| AMIE | |

| Default Customer | Unassigned (Import Items as Global) System User Selected Customer: |

- 5. Configure the database connect, ownership and synchronization period
- 6. Click Test to confirm the connection then Save when complete.

For more information on importing Items via AMIE, see: Importing Items Using Database Mapping.

5.14.3 Managing Items using Database Mapping (AMIE)

Within the CMDB Import screen multiple asset management datasources can be synchronized with the service management system. When one or more applications are configured within AMIE, a list is displayed within the AMIE Setup tab.

| Setup | Import | Custom | lize | |
|---------------------------------------------------------------------|--------|---------------|------------|----------------|
| New | Delete | | | |
| Server | | | Identifier | Last Updated |
| ZENworks Configuration Management v11.1 (LiveTime Software Inc.) | | | Blue | 04/16/12 15:52 |
| ZENworks Configuration LiveTime Software Inc. | | lardware | Green | |
| | 4 | 2 of 2 Result | | |

Importing Items Using Database Mapping

To import Items using Database Mapping, the following configuration steps need to be completed:

- 1. Select Setup>AMIE
- 2. Click New

The Server, Database, Ownership and Synchronization fields appear.

| AMIE | |
|-----------------------|-------------------------------------|
| Setup | Import Customize |
| Server | |
| Туре | ZENworks Asset Management v6.5+ |
| Identifier | |
| Database | |
| Туре | SQLServer 💌 |
| Host | |
| Port | 1433 |
| Name | ZENworks |
| Username | NCSystem |
| Password | ••••• |
| Schema | dbo |
| Catalog | ZENworks |
| Ownership | |
| Default Customer | Onassigned (Import Items as Global) |
| | System User |
| | Selected Customer: |
| Ignore Domain Info | |
| Synchronization | |
| Auto Create New Items | Yes No |
| Frequency | Never 💌 |
| | Test Cancel Save |
| | |

| Configuration | |
|---------------|-----------------------------------------------------------------------------------------------------|
| System Type | Define the system type as Database Mapping. |
| Identifier | An identifying label that is used in List Views to inform Users regarding the Source of an Item. |
| Server | |
| Туре | Select the Type of inventory management product. |
| Database | |
| Туре | Select the Database Type. |
| Host | Enter the Host name or IP Address. |
| | |

| Enter the Port Number for the database server. |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Enter the Database name. |
| Complete User name details. |
| Complete Password details. |
| Enter the Schema type. |
| Enter the Catalog name. Typically this would be the name of the Database. |
| |
| Select this option if technicians are to be notified of generated change requests. |
| |
| Select this option if Items are to be globally owned. |
| Select this option to assign imported Items to the System User. |
| Select this option to assign imported Items to a specific Customer. |
| Tick this field if the system is to disregard domain details attached to the User Name inside the AMIE source when assigning an owner. |
| |
| This option is only visible when a single AMIE source is defined within AMIE. When enabled, Items are automatically created upon synchronization, relative to the Control CMS via RFC setting within the Setup>Privileges>Requests tab. |
| If disabled, a snapshot of imported asset information is listed within the Super>Configuration>AMIE Snapshots tab. |
| Choose a synchronization interval. This can be left as Never if the database will be synchronized manually. |
| NOTE: Synchronization times will vary depending on the connection speed with the external service and the database size. |
| |

3. Click Test, to initiate a connection and test the setup

If a connection is not made, a system message will advise which part of the configuration was not successful.

- 4. Click Save
- 5. To execute the import, click the Import button
- 6. After the import is complete, an Alert appears providing results of the import.

Click on the Publish link to read the Alert details.

| Alerts | ; | | | |
|--------|----------------|-------------------|--------------------|---|
| Dis | miss | RSS Feed | | |
| | Publish | ₹ Severity | ≣ Title | ≣ |
| 🔳 🔺 | 01/06/16 16:25 | Warning | Alert1 | |
| | | | 1 - 1 of 1 Results | |

AMIE Import Alert

Alerts are generated for the Admin User after the AMIE synch is completed. The import alert summary displays:

- the details of the system that the synchronization was run against, as it is possible to import from multiple sources.
- the number of assets found in the datasource.
- the number of assets automatically created if a single datasource is configured in AMIE and the auto-create option is enabled; or if the Auto-Create option is disabled and Items already exists in the system, the number of Items that were updated.
- the number of AMIE Snapshots successfully imported, with a breakdown of new Items added and number of Items updated.

Delete Options and AMIE

The options to delete AMIE configurations can be achieved through the List View on the AMIE Setup tab, or by clicking on the a hyperlink within the Server column within the List View, which displays the expanded Setup view for the specific asset management tool.

The Delete button clicked in the AMIE>Setup tab>List View results in Global level "delete" flags being applied to all AMIE-managed Items stored in the system, however it retains the server details configured in AMIE and their associated snapshots.

The imported Items that are deleted are not completely removed from the database but are flagged as not available. By not erasing the Items completely, the historical data is maintained and allows these Items to be re-enabled in the future. It should be noted that the Item Types associated with the deleted imported Items are not disabled in the application.

The Delete button selected within the expanded Setup tab view for the specific asset management datasource, results in Configuration level deletion of the configured server and any related AMIE snapshots.

NOTE: The application must be restarted after the performance of either deletion operation, to allow the changes to take effect and prevent unpredictable behavior of the system.

| Setup Import Customize Edit Edit Server ZENworks Configuration Management v11.1 (LiveT Identifier Blue Database Type SQLServer Host 10.0.1.166 Port 1433 | ime Software Inc.) | |

To delete the server configuration within AMIE and related snapshots:

- 1. Select Setup>AMIE>Setup
- 2. Select the Server link option within the AMIE list view

The expanded Setup screen is displayed with the Delete button.

3. Select the Delete button

A pop-up message is displayed asking your to confirm the deletion action.

4. Click OK.

A warning message is displayed informing you to restart the application server to complete the deletion process.

Re-enabling Deleted Items

To re-enable Deleted Items, initiate an Item search on deleted Items within the Configuration>Items screen of the Supervisor view.

Within the Supervisor view to search for a deleted Item:

- 1. Select Configuration>Items
- 2. Click the Search button

A simple search page will be displayed

| arch Items | | | |
|-------------------------|------------------------|---|--|
| Global Options | Attributes O Full Text | | |
| Item No. | | | |
| Team | | • | |
| Description | | | |
| Notes | | | |

| User Name | | | |
| Org. Unit | | | |
| urchase Order Option | | | |
| rchase Order No | | | |
| Type Options | | | |
| Item Category | | - | |
| Item Type | | | |
| Status | All | | |
| | Active | | |
| | Inactive | | |

- 3. Enter a search term
- 4. Select the Deleted Item Only option
- 5. Click Search

A list of Items is displayed.

- 6. For the Item to be re-enabled, select the Item ID#
- 7. Click Enable

NOTE: Service desk now uses service name of the Oracle database configured with ZENworks. While using the Oracle database, if you are unable to connect to ZENworks, see ZENworks Core Admin for the service name.

5.14.4 Importing Items using a .CSV File

To import Items using a .CSV file, a .CSV template, containing all available fields, can be downloaded and populated. The service management system uses a field mapping Wizard to match fields in the template to those in the system. To download the template go to Setup > Item Import > Import. See Downloading an Item .CSV Template for more information on configuring the .CSV file.

Before Importing a CSV File

For an Item to be successfully imported, the following fields must be mapped:

- Team/s
- Status.

The Teams within the .CSV file must be created in the system before they can be associated with an Item as part of a .CSV import. Teams are created by a Supervisor under the User>Teams tab.

Items are imported based on Category (i.e. Hardware, Software, etc.), which must be configured by the Supervisor within the Configuration>Categories tab before conducting a .CSV import. The Categories configuration defines the Details recorded in the Item to be imported into the system. The Administrator must create separate .CSV files based on the Categories configured, that are then individually uploaded into the application.

For Items imported with owners, the Username in the .CSV file must match the Username within the support system. If the owner does not exist in the system, the imported Item will become a Global Item.

NOTE: If relationships are to be created between Items upon import, Parent Items should be imported first. If the system generated Item Number is to be used for the Parent Item, it needs to be included in the Parent Item Number field of the Related Items when they are imported.

Importing Items

To import a CSV File using the Import Wizard:

- 1. Select Setup>AMIE
- 2. Select the Import tab

To access a template that illustrates the fields the application maps and the data types (see below), click the Download Template link on the Item Import Wizard screen within the Setup>AMIE>Import tab.

The following fields should be visible:

Item Number(Unique char 64),Item Type(char 128),Manufacturer(char 128),Incident Team(char 64),Problem Team(char 64),Change Team(char 64),Request Team(char 64), Company(char 128),Department(char 128),Room(char 64),Username (char 64),Status(char 128),Criticality(char 64)Purchase Date(datetime),Cost(decimal),Field1(char 256),Field2(char 256),Field3(char 256),Field4(char 256),Field5(char 256),Field6(char 256),Field7(char 256),Field8(char 256),Field9(char 256),Field10(char 256),Field11(char 256),Field12(char 256),Field13(char 256),Field14(char 256),Field15(char 256),Field16(char 256),Field17(char 256),Field13(char 256),Field19(char 256),Field15(char 256),Field16(char 256),Field17(char 256),Field18(char 256),Field19(char 256),Field20(char 256),Field16(char 256),Field17(char 256),Field18(char 256),Field19(char 256),Field20(char 256),Notes(CLOB),Relationship Name(char 256),Parent Item Number(char 64)

The char ### designation in parentheses after each field name signifies what type of data the import utility expects to see in each field. For instance:

- Item Type (char 128) means that the first name field cannot exceed 128 characters.
- · Fields marked as Unique must be unique in the system.
- Note the Room details MUST be in the following format: COMPANY-DEPARTMENT;Room

When creating a .CSV file for a Category, to determine the Field number of a configured Custom Field, within the Category tab of an Item Category select the System defined Ordering option. The field labels will then be listed in sequential order from one to twenty.

3. To import, select the Item Category

The drop-down list consists of all Categories created by the Supervisor in Configuration>Categories.

4. Enter the file location, or use the Browse button

5. Select Upload

The Field Mapping Wizard appears. Fields that can be mapped to the CSV file are available in the drop-down list.

6. Review and map the fields within the .CSV

Field Mapping Wizard General

| Field Mapping Wizard | |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------|
| Item Number | Unique Item number of the Configuration Item, this can be generated by the system or defined in the .CSV file. |
| Username | Customer owning the Configuration Item, imported by entering their user name. |
| Item Type II | Item Type of the Configuration Item. |
| Manufacturer I | Sets the manufacturer details of the Item. |
| Incident Team I | Incident Team assigned to the Configuration Item. |
| Problem Team I | Problem Team assigned to the Configuration Item. |
| Change Team I | Change Team assigned to the Configuration Item. |
| Request Team I | Request Team assigned to the Configuration Item |
| Criticality | Sets the default Criticality (i.e, critical, high, moderate, low, very low) for the Item. Optional. |
| Status I | Default Configuration Item Status. |
| Company I | Company owning the Configuration Item. |
| Department I | Department owning the Configuration Item. |
| Room I | The location of the Item. The .csv file data format to import this information MUST be: |
| | COMPANY-DEPARTMENT;Room |
| Service Level | Configuration Item assigned SLA. |
| Date Format | Displays the date format required for the contract details to be imported successfully. |
| Contract Start Date | Sets the start date of a contract associated with an Item. |
| Contract End Date | Sets the end date of a contract associated with an Item. |
| Purchase Date | Date the Item was purchased. |
| Cost | The cost of the Item. |
| Monthly Cost | Sets the monthly Service Cost on per month basis for the Item. |
| Notes | Free text to add notes to the Item. Optional. |
| Details | |
| Fields 1 to 20 | Custom fields created for the Category are displayed and can be mapped to the Item based on information included in the .CSV file. |
| Relationships | |
| Relationship Name | Defines the description of the relationship between the Item set in the following field. |

| Field Mapping Wizard | |
|----------------------|--------------------------------------------------------------------------|
| Parent Item Number | Identifies the Item with which an Item is related using the Item Number. |
| Options | |
| Ignore First Line | Option to ignore first row upon import. |
| Verbose Errors | Detailed description of any errors that occur during the import process. |

I = Information that needs to exist in the system before the import

I = Fields that are mandatory

NOTE: If relationships are to be created between Items upon import, Parent Items should be imported first. If the system generated Item Number is to be used for the Parent Item, it needs to be included in the Parent Item Number field of the Related Items when they are imported.

| Relationships | | Fields that do not contain matching system records automatically create new records. |
|--------------------|-----------------------------------|--------------------------------------------------------------------------------------|
| Relationship Name | [60] Relationship Name (char 256) | |
| Parent Item Number | [61] Parent Item Number (char 64) | |
| | | Cancel Import |

- 1. Select the Ignore First Line checkbox if the first line of the imported CSV file has field headings Leave the checkbox clear if the CSV file begins with usable data.
- 2. Click Verbose Errors to record a detailed description of any errors that occur during the import Leaving the box unchecked will return a summarized error report.
- 3. Select Import to bring into the system the mapped field data

The Item Import screen displays the results of the import.

4. Select Done.

Configuring Items after the Import

During the Item Import, elements that do not exist in the database are created. These are the fields marked with a blue line within the Field Mapping Wizard:

- Item Type
- Warranty
- Organizational Units.

After an import, all Item Types that have been created will need to be further configured.

To complete Item Type configuration:

- 1. Log in to the Supervisor Portal
- 2. Select Configuration>Types

3. In the Item Types screen, click on the newly created Item

The Type Information screen appears.

- 4. Complete the following fields:

| Item Type | |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name | Name of the Item Type. |
| Manufacturer | The manufacturer of the Item Type. New manufacturers can be created and existing manufacturers can be edited and deleted by using the Edit and New buttons that appear beside the drop-down menu of manufacturers. |
| Item Category | This signifies the type of Item. (Hardware, Software or Service are the default Types, but Users with the Supervisor Role can create more if required). |
| Identifier | The drop-down list that appears is drawn from the fields defined for the Item Category selected. Although this information is not required, the Identifier is used to differentiate similar Items that may be in use throughout an organization. For example, if an organization uses the same printers for all departments, an Item Category field of "Location" could be configured for the Item Details and this could also be used as a secondary Identifier for Printer Item. |
| Criticality | Rates the degree of importance of an Item Type within an organization, which can be adjusted on a per Item basis. The 'Impact' of a Request is initially pulled from the Criticality of the Item, but can be adjusted within the request Information screen if required. Requests logged through the Customer Portal, use the Criticality of the Item to set the Priority of the request. |
| | The Incident Analyzer, if enabled by the Administrator in Setup>CMS>Incident Analyzer, ca apply the Criticality to automatically detect Problems. |
| | The minimum Criticality level can also be used to determine the off-line Items that appear on Outage pages, if the Outages pages are enabled by the Administrator in Setup>Privileges>System. |
| Icon | When the Type details are saved, the Icon selected for the Item Category will be displayed. To customize the icon for the specific Item Type, selec |
| | the Icon to access the Upload Upload or |
| | Cancel Cancel options. |
| Unit Price | The per-unit price of the Item Type. |
| Instance Total | Number of instances owned by the organization. |

| Item Type | |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Assigned | Number of instances assigned to Customers as Items. |
| Hidden | Select 'On' to ensure Customers cannot view this Item Type within the list in the Customer Portal. If all Item Types use this selection, the Item Type list will be completely removed from the Portal. |
| | Items created using Item Types with Hidden enabled, will not allow Customers to generate requests against them in the Customer Portal, nor will they be able to view or receive updates about requests logged by the User against Items with this functionality enabled. |
| Creation | Enabling this option gives Customers using the portal the ability to create new Items using this Item Type (if they have been granted the ability to create Items by the Administrator in Setup>Privileges>Customer>Create Item. (This option is not displayed when the Hidden option is enabled.) |
| Ignore Share | Enabling this option overrides the system level option for sharing requests raised against Items of this Type. Requests raised against Items of this Type will not appear in the customer portal when viewing shared requests is enabled. |
| Add Forum Topic | Create a forum topic using the Item Type Name. This option is only displayed when a new Type is being created. |
| Incident Default | The Team of Technicians assigned to support Incidents received related to the Item Type. See: Teams |
| Problem Default | The Team of Technicians assigned to support Problems received related to the Item Type. See: Teams |
| Change Default | The Team of Technicians assigned to support Change Requests received related to the Item Type. See: Teams |
| Request Default | The Team of Technicians assigned to support Service Requests received related to the Item Type. See: Teams |
| Service Level Default | The default service level for the Item Type. When Billing is enabled, service levels without a cost are listed as an option. The service level with an associated cost can be applied when the Item created, this ensures Item contract payment is processed. |

| Item Type | |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Support Levels | All Service Level Agreements assigned to the Item Type, which will be displayed as options when a request is created applying Item that uses this Type template. SLAs listed here, are used within the Costs tab of Service Types to forecast break even points on the Service relative to the number of Users. |
| Find SLA (Name) | To assign multiple SLAs use this option. Click Search to view all SLAs or refine the search by entering a specific name. Select the SLA hyperlink to assign the SLA to the Type Information. Click Cancel to clear the search field. |

- 6. Enter the Unit Price for the Item Type. This is an optional field that is used for asset management See Finance Role.
- 7. Set the Customer options
- 8. Assign the default support Teams
- 9. Assign one or multiple SLAs, as required
- 10. Click Save
- 11. Move to the Classification tab to create problem classification for this Item Type. Click on the Item Type name to continue configuration.

Assigning multiple Companies and Departments to an Item

The .CSV file import facility can also be used to assign more than one Company and Department to an Item, if required. To assign multiple companies within the Company column of the .CSV file, enter the company names separated by a semi-colon (;) If the Company or Companies do not exist in the system, or have been deleted, a new Company will be created.

When importing multiple Departments related to the multiple Companies, the Department related to the Company must be listed in the same order as the Companies and separated by a semi-colon. For example:

Company Field: comp1;comp2

Department Field: dept1:depart2 or ;dept2 or dept1;

Any departments that do not exist in the database or have been deleted, will be created as a result of the .CSV import.

To assign rooms to one of the locations of this multiple Company/Department assignment, the full details of the Company and Department must be entered into the column followed by a semi-colon and the Room number. An example of the Room import format is:

Company Field:CompName1;CompName2

Department Field:Dept1;Dept2

Room Field: CompName1 - Dept1;Room1

Updating Item Information via .CSV

To easily update multiple Items that already exist within system, information can be imported using a .CSV file. For the update to be successful, the Item number in the .CSV file must match the Item number in the system.

Follow the above *Importing Items* procedure and ensure the Item Number field is mapped correctly. If an Item Number is not included in the .CSV file, a new Item will be created.

5.14.5 Downloading an Item .CSV Template

To download and populate the CSV Template for the CMDB Item Import process:

- 1. Select Setup>AMIE
- 2. Select the Import tab

| AMIE | | |
|----------------------------------------------------------------------------------------------------------------------------|--|--|
| Setup Import Customize | | |
| Welcome to the Import Wizard | | |
| 1. Download the CSV item template and complete. (Required fields: 'Item Type', 'Status' & 'Team'). Download Template | | |
| 2. Select the Category you wish to import: | | |
| Audio Visual | | |
| BYOD Devices to import: | | |
| BYOD DevicesCopy32 | | |
| Documentation Hardware | | |
| Mobile Devices | | |
| Network Infrastructure | | |
| Peripherals Upload | | |
| Printers & Scanners Service | | |
| Software | | |
| ZENworks Bundle | | |

To view a template that illustrates the fields the application is looking for and the data types (see below), click the Download Template link on the Item Import Wizard screen within Import tab of Item Import in the Setup tab.

The following fields should be visible:

Item Number(Unique char 64),Item Type(char 128),Manufacturer(char 128),Incident Team(char 64),Problem Team(char 64),Change Team(char 64),Request Team(char 64), Company(char 128),Department(char 128),Room(char 64),Username (char 64),Status(char 128),Criticality(char 64)Purchase Date(datetime),Cost(decimal),Field1(char 256),Field2(char 256),Field3(char 256),Field4(char 256),Field5(char 256),Field6(char 256),Field7(char 256),Field8(char

256),Field9(char 256), Field10(char 256),Field11(char 256),Field12(char 256),Field13(char 256),Field14(char 256),Field15(char 256),Field16(char 256),Field17(char 256),Field18(char 256),Field19(char 256),Field20(char 256),Notes(CLOB),Relationship Name(char 256),Parent Item Number(char 64)

The char ### designation in parentheses after each field name signifies what type

of data the import utility expects to see in each field. For instance:

- a. Item Type (char 128) means that the first name field cannot exceed 128 characters.
- b. Fields marked as Unique must be unique in the system.
- c. Note the Room details MUST be in the following format: COMPANY-DEPARTMENT;Room
- 3. To import, select the Item Category

The drop-down list consists of all Categories created by the Supervisor in Configuration>Categories.

- 4. Enter the file location, or use the Browse button
- 5. Select Upload

The Field Mapping Wizard appears. Fields that can be mapped to the CSV file are available in the drop-down list.

6. Review and map the fields within the .CSV

| Field Mapping Wizard | |
|----------------------|----------------------------------------------------------------------------------------------------------------|
| General | |
| Item Number | Unique Item number of the Configuration Item, this can be generated by the system or defined in the .CSV file. |
| Username | Customer owning the Configuration Item, imported by entering their user name. |

Field Mapping Wizard

| Field Mapping Wizard | |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| Item Type II | Item Type of the Configuration Item. |
| Manufacturer I | Sets the manufacturer details of the Item. |
| Incident Team I | Incident Team assigned to the Configuration Item. |
| Problem Team I | Problem Team assigned to the Configuration Item. |
| Change Team I | Change Team assigned to the Configuration Item. |
| Request Team I | Request Team assigned to the Configuration Item |
| Criticality | Sets the default Criticality (i.e, critical, high, moderate, low, very low) for the Item. Optional. |
| Status I | Default Configuration Item Status. |
| Company I | Company owning the Configuration Item. |
| Department I | Department owning the Configuration Item. |
| Room I | The location of the Item. The .csv file data format to import this information MUST be: |
| | COMPANY-DEPARTMENT;Room |
| Service Level | Configuration Item assigned SLA. |
| Date Format | Displays the date format required for the contract details to be imported successfully. |
| Contract Start Date | Sets the start date of a contract associated with an Item. |
| Contract End Date | Sets the end date of a contract associated with an Item. |
| Purchase Date | Date the Item was purchased. |
| Cost | The cost of the Item. |
| Monthly Cost | Sets the monthly Service Cost on per month basis for the Item. |
| Notes | Free text to add notes to the Item. Optional. |
| Details | |
| Fields 1 to 20 | Custom fields created for the Category are displayed and can be mapped to the Item based on information included in the .CSV file. |
| Relationships | |
| Relationship Name | Defines the description of the relationship between the Item set in the following field. |
| Parent Item Number | Identifies the Item with which an Item is related using the Item Number. |
| Options | |
| Ignore First Line | Option to ignore first row upon import. |

Field Mapping Wizard

Verbose Errors

Detailed description of any errors that occur during the import process.

I = Information that needs to exist in the system before the import

I = Fields that are mandatory

NOTE: If relationships are to be created between Items upon import, Parent Items should be imported first. If the system generated Item Number is to be used for the Parent Item, it needs to be included in the Parent Item Number field of the Related Items when they are imported.

| Relationships | | Fields that do not contain matching system records automatically create new records. |
|--------------------|-----------------------------------|-----------------------------------------------------------------------------------------|
| Relationship Name | [60] Relationship Name (char 256) | |
| Parent Item Number | [61] Parent Item Number (char 64) | |
| | | Cancel Import |

- 1. Select the Ignore First Line checkbox if the first line of the imported CSV file has field headings. Leave the checkbox clear if the CSV file begins with usable data.
- 2. Click in Verbose Errors for detailed descriptions of any errors that may occur during the import Leaving the box unchecked will return abbreviated errors.
- Select Import to bring into the system the mapped field data The Item Import screen displays the results of the import.
- 4. Select Done.

Configuring Items after the Import

During the Item Import, elements that do not exist in the database are created. These are the fields marked with a blue line within the Field Mapping Wizard:

- Item Type
- Warranty
- Organizational Units.

After an import, all Item Types that have been created will need to be further configured.

To complete Item Type configuration:

- 1. Log in to the Supervisor Portal
- 2. Select Configuration>Types
- In the Item Types screen, click on the newly created Item The Type Information screen appears.
- 4. Complete the following fields:

5. _____

| Item Type | |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name | Name of the Item Type. |
| Manufacturer | The manufacturer of the Item Type. New manufacturers can be created and existing manufacturers can be edited and deleted by using the Edit and New buttons that appear beside the drop-down menu of manufacturers. |
| Item Category | This signifies the type of Item. (Hardware, Software or Service are the default Types, but Users with the Supervisor Role can create more if required). |
| Identifier | The drop-down list that appears is drawn from the fields defined for the Item Category selected. Although this information is not required, the Identifier is used to differentiate similar Items that may be in use throughout an organization. For example, if an organization uses the same printers for all departments, an Item Category field of "Location" could be configured for the Item Details and this could also be used as a secondary Identifier for Printer Item. |
| Criticality | Rates the degree of importance of an Item Type within an organization, which can be adjusted on a per Item basis. The 'Impact' of a Request is initially pulled from the Criticality of the Item, but can be adjusted within the request Information screen if required. Requests logged through the Customer Portal, use the Criticality of the Item to set the Priority of the request. |
| | The Incident Analyzer, if enabled by the Administrator in Setup>CMS>Incident Analyzer, can apply the Criticality to automatically detect Problems. |
| | The minimum Criticality level can also be used to determine the off-line Items that appear on Outages pages, if the Outages pages are enabled by the Administrator in Setup>Privileges>System. |
| Icon | When the Type details are saved, the Icon selected for the Item Category will be displayed. To customize the icon for the specific Item Type, select |
| | the Icon to access the Upload Upload or |
| | Cancel Cancel options. |
| Unit Price | The per-unit price of the Item Type. |
| Instance Total | Number of instances owned by the organization. |
| Assigned | Number of instances assigned to Customers as Items. |

| Item Type | |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hidden | Select 'On' to ensure Customers cannot view this Item Type within the list in the Customer Portal. If all Item Types use this selection, the Item Type list will be completely removed from the Portal. |
| | Items created using Item Types with Hidden enabled, will not allow Customers to generate requests against them in the Customer Portal, nor will they be able to view or receive updates about requests logged by the User against Items with this functionality enabled. |
| Creation | Enabling this option gives Customers using the portal the ability to create new Items using this Item Type (if they have been granted the ability to create Items by the Administrator in Setup>Privileges>Customer>Create Item. (This option is not displayed when the Hidden option is enabled.) |
| Ignore Share | Enabling this option overrides the system level option for sharing requests raised against Items of this Type. Requests raised against Items of this Type will not appear in the customer portal when viewing shared requests is enabled. |
| Add Forum Topic | Create a forum topic using the Item Type Name. This option is only displayed when a new Type is being created. |
| Incident Default | The Team of Technicians assigned to support Incidents received related to the Item Type. See: Teams |
| Problem Default | The Team of Technicians assigned to support Problems received related to the Item Type. See: Teams |
| Change Default | The Team of Technicians assigned to support Change Requests received related to the Item Type. See: Teams |
| Request Default | The Team of Technicians assigned to support Service Requests received related to the Item Type. See: Teams |
| Service Level Default | The default service level for the Item Type. When Billing is enabled, service levels without a cost are listed as an option. The service level with an associated cost can be applied when the Item created, this ensures Item contract payment is processed. |
| Support Levels | All Service Level Agreements assigned to the Item Type, which will be displayed as options when a request is created applying Item that uses this Type template. SLAs listed here, are used within the Costs tab of Service Types to forecast break even points on the Service relative to the number of Users. |

Item Type

 Find SLA (Name)
 To assign multiple SLAs use this option. Click

 Search
 to view all SLAs or refine

 the search by entering a specific name. Select the
 SLA hyperlink to assign the SLA to the Type

 Information. Click
 Cancel

 to clear the
 search field.

- 6. Enter the Unit Price for the Item Type. This is an optional field that is used for asset management See Finance Role.
- 7. Set the Customer options
- 8. Assign the default support Teams
- 9. Assign one or multiple SLAs, as required
- 10. Click Save
- 11. Move to the Classification tab to create problem classification for this Item Type.

Click on the Item Type name to continue configuration.

Assigning multiple Companies and Departments to an Item

The .CSV file import facility can also be used to assign more than one Company and Department to an Item, if required. To assign multiple companies within the Company column of the .CSV file, enter the company names separated by a semi-colon (;) If the Company or Companies do not exist in the system, or have been deleted, a new Company will be created.

When importing multiple Departments related to the multiple Companies, the Department related to the Company must be listed in the same order as the Companies and separated by a semi-colon. For example:

Company Field: comp1;comp2

Department Field: dept1:depart2 or ;dept2 or dept1;

Any departments that do not exist in the database or have been deleted, will be created as a result of the .CSV import.

To assign rooms to one of the locations of this multiple Company/Department assignment, the full details of the Company and Department must be entered into the column followed by a semi-colon and the Room number. An example of the Room import format is:

Company Field:CompName1;CompName2

Department Field:Dept1;Dept2

Room Field: CompName1 - Dept1;Room1

Updating Item Information via .CSV

To easily update multiple Items that already exist within system, information can be imported using a .CSV file. For the update to be successful, the Item number in the .CSV file must match the Item number in the system.

Follow the above *Importing Items* procedure and ensure the Item Number field is mapped correctly. If an Item Number is not included in the .CSV file, a new Item will be created.

5.14.6 Financial Management

Financial Management quantifies, in financial terms, the value of IT services for the business and IT department. This includes measuring the value of the underpinning infrastructure that provides the services and qualifying operational forecasts. Applying a services approach to IT, financial management helps identify, document and agree on the value of services being provisioned by IT, and provides service demand modeling and management.

With a goal to ensure funding for the delivery and consumption of services, Financial Management focuses on the demand and supply requirements based on business strategy, capacity inputs and forecasting use. As a transitional role between an organization's corporate finances and service management, Financial Management calculates and assigns a monetary value to a Service and service components to allow costs to be spread across the organization.

The monetary value is derived by calculating the operating and capital costs, which include the investments made in hardware and software license costs, annual maintenance fees for hardware and software and personnel resources used to support and maintain the services, across the number of Users.

Tightly integrated throughout the application, Financial Management derives hierarchical costs from within the CMDB and considers Org Units as Cost Centers, while extending functionality built into the Service Item costs calculator. Used as a forecasting tool, it provides the service organization with information about pricing a service, by detailing the contributing cost factors and applying concepts such as cost splitting across services that leverage common infrastructure. Stored in the CMDB, the central repository, organizations can generate their own reports and all data is broken down by cost center, ready to be reassembled in real time for the User interface to assist with business planning and the budgeting processes.

Financial Management is not a standalone process in this service management application, but a component of Service Portfolio Management and the Service Catalog, with direct access being found within the Service Item Costs tab of any Service Category Item.

To access this functionality, Users must be assigned the Finance Role, in the Information tab of their User information screen. For detailed information about using Financial Management, refer to Financial Management Applied.

5.14.7 Service Portfolio Management

The Service Portfolio details the commitments and investments made by a Service Provider to its customers and within the markets they service. It contains current contractual obligations, services under development and continuing service improvement programs.

The Portfolio represents all engaged resources and resources being released during the different phases of the Service Lifecycle. It includes the Service Pipeline that consists of services under development and the Service Catalog, which includes customer visible active services that have the potential to recover costs or earn profits for the Services provided.

Service Portfolio Management is a dynamic and ongoing process that covers the following stages in work practices:

- · Define list services, confirm business cases and verify portfolio data
- Analyze maximize portfolio value, set priorities
- Approve finalize portfolio proposal, authorize services and resources
- Charter communicate decision and allocate resources.

The service management system includes ITIL certified Service Portfolio Management, with Service Pipeline and Service Catalog functionality, as part of the base product. Combining the Service Item Lifecycle stored in the embedded CMDB, with assigned Service Level Agreements and service Teams, the system enables organizations to manage their Service Offerings from strategy to design through to transition, operation and retirement.

Service Portfolio Management in the system allows organizations to create Service Categories that include business-related attributes, such as business processes supported, business owners and business users. This ensures organizations record all relevant information against the Service.

Organizations can further optimize their Service Portfolio Management by tracking and reporting on Service Offering and Service Component usage, Service Level performance and costs. This includes the functionality to calculate break-even points (B.E.P.) for offering a service, which allows support organizations to charge the appropriate cost for offering the service to their internal or external customers. This is achieved by recording of financial attributes against services, including service cost, service charges and service revenue.

The service management system SPM capability also allows organizations to easily record the technical aspects of services such as applications used, IT Owners, supporting services, dependent services, SLAs and OLAs, Contracts and Agreements by defining Relationship Maps.

Working with SPM

Using the SPM functionality, organizations can create and publish all Service Offerings throughout the Service Lifecycle, which include the phases of:

- 1. Services under development, that are being considered but are not yet released (Service Pipeline)
- 2. Services in production/operation, that would be included in the Service Catalog
- 3. Retired/discontinued Service Offerings.

Service Items are recorded against the different stages of the Lifecycle and easily accessed through the filter views, available within the Configuration>Items screen:

| Filter | Relationship |
|------------------|-----------------------------------------------------------------------------------------------------------------------------|
| All Items | All Items stored within the CMDB, regardless of the assigned Lifecycle State. |
| Hardware Catalog | All Items that use the Hardware Category Template stored within the CMDB, regardless of the assigned Lifecycle State. |
| Service Catalog | All Items that use the Service Category Template stored within the CMDB that are in an active Lifecycle State. |

| Filter | Relationship |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------|
| Service Pipeline | All Items that use the Service Category Template stored within the CMDB that are assigned a Pre- production Lifecycle State. |
| Service Portfolio | All Items that use the Service Category Template stored within the CMDB, regardless of the assigned Lifecycle State. |
| Software Catalog | All Items that use the Software Category Template stored within the CMDB, regardless of the assigned Lifecycle State. |

Consistent with the Lifecycle model used for all Configuration Items (CIs) throughout the application, Service CIs are created using the Service Category template, with a series of Lifecycle States customized to represent the different phases a CI can transition through (i.e., inception, design, implementation, operation or retirement phases).

Within each State of the Service Lifecycle, the relevant Users included in the Service Portfolio Team can be assigned, allowing them to manage Service Item information when the Item is allocated the State.

Using the SPM Functionality

The following outlines how the SPM Team define, analyze, authorize and charter a Service Offering in the system. This is achieved as a Supervisor User with Configuration and Service Level Management privileges enabled.

To begin:

1. Create the Service Portfolio Team in the Service > Teams tab, and assign all the relevant Users

Then within the Group tab, create the work and management groups associated with the Service Lifecycle and assign the relevant Users. (See: SPM Teams.)

2. Within the Configuration>Categories Tab, edit the existing Service Category

Duplicate and edit an existing Service Category or click New, to create a new Service Category. (See: Categories.)

3. In Edit mode, click the Service Category option and assign the Service Portfolio Team

Set field labels for the Item, including any relevant business related attributes. Save and move to the Lifecycle tab.

4. Edit the default Lifecycle, to include all the applicable States defined by the SPM Team

Some example States include requirements, defined, analyzed, approved, chartered, designed, developed, built, test, released, operational, retired. (See: Categories Lifecycle.)

- 5. Within each stage of the Lifecycle define the following State options:
- 6.

| | Description |
|--------------|-------------------------------------------------------------|
| Status | |
| Name | Enter the name of the Lifecycle State. |
| Active State | Stipulates if the Item is Active, when assigned this State. |

| | Description |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Offline State | Only visible when Active is set to No. Indicates if the Item is offline and inactive. Items moved into states where this is enabled, have availability metrics calculated. |
| Pre-production State | Only visible for Service Category lifecycle states. Items that use this state are available within the Service Pipeline filter view of the Configuration>Items tab. |
| Entry Point | An Entry Point is used to indicate the start of a Lifecycle. To make the state a Workflow Entry Point, select the Entry Point checkbox. |
| | As the Entry Point is the first state, the Previous States field will be removed. |
| Exit Point | Select whether the state will be an Exit Point. An Exit Point is used to indicate the end of a Lifecycle. |
| Service Team Group | Assign a Group within the associated Service Portfolio Team, to allow these Users to edit the Item details when it is assigned this stage of the Category Lifecycle. |

- 7. Continue to configure the Category like any other Category and Save
- Within the Configuration > Types tab, create an Item Type using the Service Category (See: Item Types.)
- 9. Assign one or more SLAs

Multiple SLAs can be associated with the Type template as it allows the User to calculate the service costs for all Items that apply the Type template but that may need to be associated with different SLAs.

10. Move to the Costs tab and complete known details

Within the Costs tab, organizations can calculate the Break-Even Point (BEP) of a Service based on forecasting the number of Customers of that Service. This enables the organization to account for the per calendar month price of the Service, which is used to calculate the ongoing revenue figures within the Item Costs tab that uses the Service Type template.

| assific | ations | Items | R | equests | | Costs | | Fields | | Responses |

| Forecast Costs | |
|----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Capital | Enter the proposed total cost to be invested in the Service. |
| Recovery | Complete the field with the expected number of years designated to recover the costs of implementing the Service. |
| Recurring | Enter the proposed ongoing cost, on a per calendar month basis, for offering the Service. |
| Services | Using the details entered in the Costs fields and the cost per annum of the SLA, enter the forecast number of Customers/Users to calculate the break even point (B.E.P) of the Service. Using the auto-calculated B.E.P., enter a per calendar month Price for the Service to recover costs. This figure is used in the Service Item Costs tab to calculate the ongoing Revenue figures. |
| Actual Costs | |
| Capital | Content for this field is derived from the Cost field within then Costs tab of the Item created using this Type. |
| Recurring | Content for this field is derived from the Monthly Cost field within the Costs tab of the Item created using this Type. |

12. Create the Item and assign the relevant State, which in turn associates the relevant Users included in the SPM Team.

Assign the Users and/or Org Units to set the number of affected Users, and set the appropriate SLA.

The Costs tab of a Service Item includes information related to the financial and contractual details associated with the Item. The information more specifically related to the Service Item is recorded in the Charges and Revenue fields, as this information allows service and support organizations to calculate the costs of offering a service and if appropriate, recover the costs from the customers.

| 1 | 3 | |
|---|---|--|
| | | |

| Charges | |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Price (per user) | Draws the figure from the Service Item Type Costs tab and displays this as a daily amount. This figure is then multiplied with the number of Users/ Customers assigned to the Item, to calculate the Revenue costs. |
| Cost (per user) | Draws the figure from the Inherited Costs and displays this as a daily amount. This figure is then multiplied with the number of Users/Customers assigned to the Item, to calculate the actual Costs. |
| Revenue | |

| Charges | |
|------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Month to Date | Uses the Charges figure, multiplied with the number or Users and days of month passed, to calculate the month to date figure. |
| Previous Month | A reference figure for an average monthly cost, based on the previous months revenue for the Service Item. |
| Availability | |
| Avg Repair Time | Entries displayed here are automatically calculated based on the average length of time an Item is offline. |
| Avg Time To Fail | Figures displayed here are automatically calculated based on the average time between an Item being moved to an offline State. |

5.14.8 Financial Management Applied

Financial Management can be used to forecast the costs for offering a Service and can also calculate the amount that should be charged to the Service Users in order to recover costs.

To use Financial Management as a tool for calculating the financial value of the underpinning infrastructure that provisions services and to qualify operational forecasts, you need to:

- Provide the User access to the functionality
- Enable SLA costing functionality
- Enable the functionality within the Category
- · Create the Item Type and enter forecast figures
- · Create the Service Item, which automatically applies the forecast figures
- Build the relationships between the Service and underpinning hardware and software, to associate actual costs
- Use Finance Reports to compare forecast costs with actual costs, and chargeback costs to the Org. Unit Users.

NOTE: To complete the following outlined process, a User must have Supervisor and Administrator access.

Enable Financial Management Access

To access the Financial Management functionality a User must be assigned the Finance Role within the Information tab of their User Information screen. Assigning the Role within a system synchronized with an authentication server, the system administrator needs to include the User in the Finance group in LDAP.

To switch on the functionality for an existing User in a system not synched with an LDAP server, as a Supervisor:

- 1. Select the User > Users tab
- 2. Click on the Name hyperlink of the relevant User

- 3. Select Edit
- 4. Tick the Finance box in the Roles field

| Roles | Supervisor Administrator Customer | C Technician Manager | Partner Finance | |
|-------|-----------------------------------------|-------------------------|--------------------|--|
|-------|-----------------------------------------|-------------------------|--------------------|--|

5. Click Save.

The User can now access the Finance Management functionality within the consolidated User view.

Enable Functionality

Financial information can only be calculated for Service Items that are created using a Category, which has the Service Category option enabled. By enabling this option, the Costs Tab is made available with the Item Type where baseline figures can be recorded.

As a User with the Finance Role:

- 1. Move to the Configuration > Categories tab
- 2. Click the Service Item Category hyperlink

| Item | Categories |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | New Delete Duplicate |
| | Item Category |
| | Audio Visual |
| | Documentation |
| | The Service Category is where Users define bill non-tangible Items that are generally accessed by a large number of customers. For example, Email or Internet are common Propreservices typically provided by the Service Desk. P Intere & Segments |
| | Service |
| | Software |
| | 1 - 9 of 9 Results |

3. Verify the Service Category option is checked

| Item Categories | |
|-----------------|---------------------------|
| Category | Lifecycle Classifications |
| Edit | Duplicate |
| Category | |
| Name | Service |
| | Service Category |

4. Click Done.

Charging for Service

If the service and support organization is to charge Organizational Units, that is companies or departments, for the ongoing service they provide the costing functionality for the Service Level Agreements (SLAs) needs to be enabled, and the Prices for the different Agreements need to be assigned to each of the SLAs.

As a User with Administrator access, within the Setup screen:

- 1. Select Setup > Billing
- 2. Click Yes for the Display SLA Prices option

| Billing | | | | | |
|------------------------|--------|--------|--------|------|---|
| Setup | | | | | |
| Billing Module | | | | | |
| Enable Purchase Orders | Yes | No |) | | |
| Enable Contracts | Yes | No |) | | |
| Enable Invoices | Yes | No |) | | |
| Display SLA Prices | Yes | No | + | | |
| Global Settings | | | | | |
| Currency | United | States | Dollar | | • |
| | | | | Save | |

3. Click Save

The Annual, Request and Hourly Price fields are now made available within an SLA Editor screen.

- 4. Switch to the User Portal to access the Supervisor view
- 5. Move to the Service > SLAs tab
- Select the Name hyperlink for an SLA The SLA Editor is now displayed.
- 7. Click Edit

8. Enter the relevant figure in the Annual Price field

The Annual Price entered should be the per User, per year price for the SLA.

| SLA Editor | | | |
|-------------------|----------------|-----------------|---------|
| Details | Targets Blacko | outs Workflows | |
| Duplicate | | | |
| Details | | Internal Costs | - |
| Name | SLA | Annual Cost | 1500.00 |
| On Breach | cc Team Leader | Request Cost | 1400.00 |
| Pause on Holiday | | Hourly Cost | 100.00 |
| Customer Timezone | | Customer Prices | |

9. Click Save and Done.

Repeat the process for all relevant SLAs configured in the system. For detailed information about configuring SLAs see Creating SLAs.

Forecast Service Costs

When proposing a Service as part of Service Portfolio Management, the investment and ongoing costs for offering a Service can be calculated. This information can then be used to project potential revenue for offering the Service and allow consumers of the Service to be charged for accessing the Service based on User access. For an example, we will use the Service Desk Service, considering the investment in hardware and software plus the ongoing SLA expense for offering the Service, when forecasting costs.

To forecast the cost of offering a Service, as a Financial User:

- 1. Move to the Configuration > Types tab
- Select the default Service Desk Item Type If creating a new Item Type refer to Creating Item Types.
- 3. Click Edit
- 4. Search and select the relevant SLAs for the Supported Levels field

This is where SLAs that have Prices are associated with them.

| Service L | evel | |
|-----------------|-------------------------------|----|
| Default l | Level | |
| Supported Le | evels 🖨 SLA (\$1,500.00 p.a.) | |
| Find SLA (Name) |) | 80 |
| SLA | <u>ا</u> | |
| Platinum | | |
| SLA | | |
| Warranty | | |
| 1 - 3 (| of 3 Results | |

5. Move to the Costs Tab

7.

The Capital, Recovery and Recurring cost fields are now displayed.

- 6. Complete the following fields:
 - Costs Capital Enter the sum total to be invested in hardware and software infrastructure that will underpin the Service. Recovery Complete the field with the number of years designated to recover the costs of implementing the Service. Recurring Enter the ongoing cost, on a per calendar month basis, for offering the Service. For example, annual support and maintenance agreement costs charged on a monthly basis. Services Using the details entered in the Costs fields and the cost per annum of the SLA, enter the forecast number of Customers/Users to calculate the break even point (B.E.P) of the Service. Using the auto-calculated B.E.P., enter a per calendar month Price for the Service to recover costs. This figure is used in the Service Item Costs tab to calculate the ongoing Revenue figures. NOTE: If an SLA with an Internal Cost is assigned to the Type, the B.E.P will be the SLA cost divided by 12 plus the cost of recovering the Capital expenditure over the number of years defined for the Capital to be recovered. For example, where the SLA cost is \$240 for the year, the B.E.P will never be less than \$20 per month. Actual Costs Capital Content for this field is derived from the Cost field within the Costs tab of the Item created using this Type. Recurring Content for this field is derived from the Monthly Cost field within the Costs tab of the Item created using this Type.

8. Enter a figure in the Forecast Users field for each SLA

(The displayed SLAs are based on the ones assigned to the Supported Levels field in the Information tab.)

If multiple SLAs are assigned to the Item Type and Forecast Users are assigned to each SLA, the Costs are divided by the total number of Forecast Users as calculated across the SLAs to arrive at the B.E.P. The system does not differentiate between who the Users are, it only accounts for the number of Users

9. Enter the Price for the Service to recover costs in a per calendar month

Use the calculated Break Even Point (B.E.P.) to set the Price. This figure is then used as a comparison figure for the Actual cost in the Service Item Costs Tab.

| | | | | | | | | Service |
|----------------|--------|-------------|---------------|----------------|---------|---------------|-----------|---------|
| Forecast Costs | | | | | | Actual Costs | | |
| Capital 1 | 18000. | 00 | | | | Capital | \$0.00 | |
| Recovery 5 | 5 | years | | | | Recurring | 0.0 p.c.m | |
| Recurring 2 | 250.0 | p.c.m | | | | | | |
| Services | | | | | | | | |
| s | SLA | Cost (p.a.) | Current Users | Forecast Users | B.E.P. | Price (p.c.m) | | |
| В | Bronze | \$300.00 | 1 | 70 | \$30.50 | 32.00 | | |
| G | Gold | \$400.00 | 1 | 10 | \$38.83 | 40.00 | | |
| s | Silver | \$350.00 | 1 | 20 | \$34.67 | 36.00 | | |

10. Click Save and Done.

The forecasted Price per User is now available within the Charges Price field on the Costs tab of the Service Item.

| Item Information | | | | | |
|--------------------------|---------------------------------|-----------------------|--------------------------------|-------------|------------------------------|

Calculate Actual Service Costs

To calculate the actual Service Costs, the relationships of the infrastructure Items that underpin the Service need to be mapped within the Relationships tab. Working with these relationships, it should be noted that the Service is considered a Child Item within the hierarchy.

To build the relationship map refer to the Relationships Tab.

After the underpinning infrastructure and its associated costs are related to the Service Item, the following financial information is available in the Service Item Costs tab:

| Financial | Description |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cost | The financial investment made to purchase the Item. This figure is also used when the Delegate Costs is enabled for allocating costs across related Items. |
| | NOTE: Typically for Service Items, the infrastructure costs would be zero as this would be derived from the associated Parent Items. |
| Monthly Cost | The amount invested on a monthly basis to maintain the running of an Item. This figure is also used when the Delegate Costs option is enabled for allocating costs across related Items. |
| Usage Unit Cost | This is used as a reference field, where the User can enter base unit cost, for example per Megabyte data charge, which can be used for calculating costs in custom reports. |
| Purchase Date | The date the Item was purchased. |
| Depreciate Over | Enter the number of years the Item is to be depreciated over, if required. |
| Depreciated Value | The system calculates the current value of the Item based on the Purchase Date and the number of years the Item is to be Depreciated Over. |
| Audit Date | Set the date the Item is next to be audited. |
| PO Number | If Purchase Orders are enabled for the system, the field is visible and automatically populated with the PO number generated by a User within the Finance>Purchase Orders tab, when the Item order was recorded in the system. |
| Charges | |
| Price (per user) | Draws the figure from the Service Item Type Costs tab and displays this as a daily amount. This figure is then multiplied with the number of Users/Customers assigned to the Item, to calculate the forecasted Revenue. |
| Cost (per user) | Draws the figure from the Inherited Costs and displays this as a daily amount. This figure is then multiplied with the number of Users/Customers assigned to the Item, to calculate the actual Costs. |
| Revenue | |

| Financial | Description |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Month to Date | Uses the Charges Price figure, multiplied by the number of Users and days of month passed, to calculate the month to date figure. |
| Previous Month | A reference figure for an average monthly revenue figure, based on the previous month's revenue for the Service Item. |
| Costs | |
| Month to Date | Uses the Charges Cost figure, multiplied by the number of Users and days of month passed, to calculate the month to date Cost. |
| Previous Month | A reference figure for an average monthly cost, based on the previous month's cost for the Service Item. |
| Inherited Costs | |
| Inherited Capital | Total infrastructure costs of parent CI's that directly contribute to the cost of the Service Item. This figure is derived from all the Cost fields within the Item Information>Costs tab of related Parent Items. |
| Inherited Ongoing | Running costs of all associated Items that enable the Service Item to continue to function. This figure is derived from all the Monthly Cost fields within the Item Information>Costs tab of related Parent Items. |
| Delegate Costs | To enable cost delegation across the relationship map allowing associated Items to inherit the costs of the current CI, select Yes. This will take the figures from the Cost and Monthly Cost fields for the Item and spread them across related Child Items. |
| | Define the technique to be used to evaluate the cost split: |
| | <i>Child Count</i> :Costs are split by percentage based on the number of child CI's the costs are being delegated across. |
| | <i>User Count</i> :Costs are split proportionally based on the number of users of the child CI's the costs are being delegated across. |
| | <i>Custom</i> %: Allows for the % cost to be assigned within the relationship. To do this, within the Service Item Relationships tab, all Items within the defined relationship map must have the same setting and then the Cost Split % can be set within the table included on the Relationships tab by clicking on the 0.00 link. Note, if a N/A link is visible within the Cost Split % column, then that Item does not have the Custom % option selected. |
| Availability | |
| Avg Repair Time | Entries displayed here are automatically calculated based on the average length of time an Item is offline. |

| Financial | Description |
|------------------|--------------------------------------------------------------------------------------------------------------------------------|
| Avg Time To Fail | Figures displayed here are automatically calculated based on the average time between an Item being moved to an offline State. |

Inherited Costs

Charging Organizational Units appropriately for a Service can be based on figures derived from the Items associated with the Service. For example, the Service Desk is hosted on a server and uses service management software. The costs associated with the server and software are combined to make the Inherited Capital cost, while any ongoing support contracts would be assigned as an Inherited Ongoing cost on a per month basis.

To derive the amounts from the related infrastructure and populate the fields within the Child Item, the Delegate Costs field must be enabled within the Inherited Costs for the Parent Items and the technique for deriving the cost must be assigned to the CI.

| Information | | | | | |
|--------------------------|----------------|----------------------|-------------------------------------|--------------|--------------------------|
| Information | Details | Costs | Requests Re | elationships | |
| Duplicate | B Print | | | | Item # 100003 (Oracle 11 |
| Financial | | Cost to be applied | SLA Details | | |
| Cost | 10000.00 | across related Items | Service Level | Silver | \$ |
| Monthly Cost | 166.00 | | | | |
| Purchase Date | 06/14/11 17:58 | | Availability | | |
| Depreciate Over | | years | Avg Repair Time Avg Time To Fail | | |
| Depreciated Value | \$0.00 | | Avg time for all | 140 | |
| Audit Date (mm/dd/yy) | | | | | |
| PO Number | | | | | |
| Inherited Costs | | | | | |
| Inherited Capital | \$20,000.00 | Custom configurati | on to apply apply | | |
| Inherited Ongoing | \$333.33 | System configurati | | | |
| Delegate Costs | Yes No | to relater | u nems | | |
| Charles | User Count | | | | |
| Strategy | User Count | | | | |
| | | | Delete | Ca | ncel Save |

In the Service Desk example, for the server hosting the Service Desk Service it would be appropriate to delegate costs applying the Child Count technique as multiple software/service CIs may be associated with the server. While, the User Count would be used to delegate costs to the service management software.

| Charges | | Item Information | |
|-------------------|---------------------------------|-------------------------------------------|-----------------------------------|
| Price (per user) | \$36.00 p.c.m (\$1.20 daily) | Information Details Costs | Requests Relationships |
| Cost (per user) | \$81.77 p.c.m (\$2.73 daily) | Edit Duplicate 🔒 Print | ltem # 100003 (Oracle 11g) |
| Revenue | | Financial | SLA Details |
| Month to Date | N/A | Cost \$10,000.00 | Service Level Silver |
| Previous Month | N/A | Monthly Gost \$166.00 | |
| Costs | | Purchase Date 06/14/10 17:58 | |
| Month to Date | N/A | Bepreciate Over 3 years | Availability |
| Previous Month | N/A | Depreciated Value \$6,666.67 | Avg Repair Time N/A |
| Inherited Costs | | | |
| Inherited Capital | \$30,000.00 | Edit Duplicate 🛱 Print | Item # 100004 (Service Manager) |
| Inherited Ongoing | \$499.33 | Edit Dupicace (B) Finit | itelii # 100004 (Service Manager) |
| Delegate Costs | Yes No | Financial | SLA Details |
| | | Cost \$20,000.00 Monthly Cost \$333.33 | Service Level |

After the relationships have been defined for the Service and the Inherited Costs applied, the Finance User can verify the forecast numbers by comparing the Inherited Costs within the Item>Costs tab, to the Capital and Recurring Costs recorded in the Item Types Costs tab. Any disparity between the figures should alert the Finance User as to whether the Service is within budget and if relevant, making or costing money.

Finance Reports

The Finance User can access the following Reports within the Reports>Finance tab, to assist with verifying the cost and revenue generated by a Service, and monitoring how a Service is used.

| Finance Reports | Description |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Service Cost | The cost of providing a Service is calculated nightly and saved, along with the revenue figures, in the ITEM_REVENUE table. |
| | The cost of the Service includes all the cost factors and saves a figure each night, per service, per cost centre. This is the sum of these for a Service. |
| Service Revenue | The price charged for providing a Service is calculated nightly and saved, along with the cost figures in the ITEM_REVENUE table. |
| | The price charge for the Service is determined in the cost calculator configured in the Service Item Type. |
| Total Service Cost | The cost of providing a Service is calculated nightly and saved, along with the revenue figures, in the ITEM_REVENUE table. |
| | The cost of a Service includes all the cost factors and saves a figure each night, per service, per cost centre. This is the sum of these across all Services. |
| Total Service Revenue | The price charged for providing all Services is calculated nightly and saved, along with the cost figures in the ITEM_REVENUE table. |
| | The price charge for the Service is determined in the cost calculator configured in the Service Item Types associated with all Services. |
| Service Consumption | Uses the total number of consumers of a service as recorded in the ITEM_REVENUE table, which is broken down by cost centre, |
| | to illustrate how the number of consumers of a service varies over time. |

5.15 ZENWorks

- Section 5.15.1, "Enabling OpenID for Authentication," on page 602
- Section 5.15.2, "Configuring the ZENworks Primary Server Details in ZENworks Service Desk," on page 603
- Section 5.15.3, "Automatic Configuration," on page 603
- Section 5.15.4, "Manual Configuration," on page 603
- Section 5.15.5, "Reset Button," on page 604

Within the ZENWorks tab, the Service Desk can be configured to work seamlessly with the Configuration Management tool. In the first instance, this is achieved by using ZENWorks as the OpenID Provider for authenticating Service Desk Users and Customers. On a day to day basis, the ability to use the Remote Control and Bundle Management capability for the Configuration tool within a request, increases the efficiency of Service Desk Users when managing their workload.

5.15.1 Enabling OpenID for Authentication

To enable authentication of Service Desk Users through ZENWorks, the OpenID Consumer option within **Setup>Privileges>System** must first be enabled.

Once enabled, configure the ZENworks location details and OpenID information within the **AMIE>ZENWorks** tab.

5.15.2 Configuring the ZENworks Primary Server Details in ZENworks Service Desk

To allow ZENworks Service Desk users to use ZENworks Software, Hardware, Bundle, and Remote Management features, or to login to ZENworks Control Center from the ZENworks Service Desk User Interface, you must configure the details of ZENworks Primary Server.

You can use one of the following options:

NOTE: Automatic Configuration is applicable for ZENworks 11.2.3 and higher versions only. For earlier versions of ZENworks, use the Manual Configuration option.

5.15.3 Automatic Configuration

- 1 In the ZENworks Service Desk user interface, click Setup > ZENworks.
- 2 In the General tab, specify the ZENworks Server address.
- 3 Select Automatic Configuration to automatically exchange certificates.
- 4 In the Additional Details for "Getting Started" mode section, specify ZENworks Administrator user credentials to retrieve LDAP and AMIE configuration details.

NOTE:

- The ZENworks Service Desk and ZENworks certificates need to be exchanged to complete the registration process.
- Ensure that the system time is in sync with ZENworks Service Desk and ZENworks Server.

5.15.4 Manual Configuration

- 1 In the ZENworks Service Desk user interface, click Setup > ZENworks.
- 2 In the General tab, specify the ZENworks Server address.
- 3 Select Manual Configuration.
- 4 Click Download Certificate and store it on the local drive.

Open ID Settings

- 1 In the ZENworks Service Desk user interface, click Setup > ZENworks.
- 2 Click OpenId tab.

| ZENworks Setup | | |
|-----------------|----------------------------------------------------------------|---|
| General | OpenId | |
| OpenID Provider | | _ |
| Name | ZENworks | |
| lcon | 0 | |
| URL | https://164.99.98.82/zenworks/?requestHandler=ZENOpenIDHandler | |

3 Read the information displayed in the OpenID Provider panel:

The OpenID Provider panel is displayed only if authentication of Service Desk users through ZENworks has already been enabled. For more information, see Using ZENworks with ZENworks Service Desk .

Name: Displays ZENworks as the OpenID Provider name.

Icon: Displays the ZENworks icon that will be available on the ZENworks Service Desk login page for the Service Desk customers and users accessing Service Desk.

URL: This field is initially blank. It display the OpenID Provider URL that is automatically generated based on the address specified in the **Server Address** option when you click **Save**.

4 Click Save.

The URL option in the OpenID Provider panel displays the OpenID Provider URL that is automatically generated based on the address specified in the Server Address option.

5.15.5 Reset Button

Select the Reset button for the system to generate a new certificate that allows the service desk to communicate with Zenworks. When selected, the system will display an information message providing the location details for downloading the new certificate.

To complete the ZENWorks integration:

- Import Customer and User details from the eDirectory authentication server
- Import Items using the AMIE and the ZENWorks 11.

When validating account details of Users and Customers accessing the Service Desk, the system will query two locations for unique identifiers:

- · Details in the GUID field imported from eDirectory for the Customer or User
- Customer's or User's email address.

5.16 **ZENworks Import**

Within the ZENworks CMDB import screen, multiple asset management datasources can be synchronized with the service management system.

- Section 5.16.1, "Importing Items from ZENworks," on page 605
- Section 5.16.2, "AMIE Import Alert," on page 615
- Section 5.16.3, "AMIE XML Migrate," on page 615

| Host | Enter the ZENworks Host name or IP Address. |
| Port | Enter the Port Number for the database server. |
| Name | Enter the Database name. |
| Username | Complete User name details. |
| Password | Complete Password details. |
| Schema | Enter the Schema type. |
| Catalog | Enter the Catalog name. Typically this would be the name of the Database. |

Configuration

| Comgalation | |
|---------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Notification (Only If 'Control CMS via RFC' is enabled) | |
| Email RFC's to Tech? | Select this option if technicians are to be notified of generated change requests. |
| Ownership | |
| Unassigned (Import Items as Global) | Select this option if Items are to be globally owned. |
| System User | Select this option to assign imported Items to the System User. |
| Selected Customer | Select this option to assign imported Items to a specific Customer. |
| Ignore Domain Info | Tick this field if the system is to disregard domain details attached to the User Name inside the AMIE source when assigning an owner. |
| Synchronization | |
| Auto Create New Items | This option is only visible when a single AMIE source is defined within AMIE. When enabled, Items are automatically created upon synchronization, relative to the Control CMS via RFC setting within the Setup>Privileges>Requests tab. |
| | If disabled, a snapshot of imported asset information is listed within the Super>Configuration>AMIE Snapshots tab. |
| Frequency | Choose a synchronization interval. This can be left as Never if the database will be synchronized manually. |
| | NOTE: Synchronization times will vary depending on the connection speed with the external service and the database size. |
| Item Type | |
| Hardware | Select this option if you want to import the hardware details of ZENworks devices. |
| Software | Select this option if you want to import the software details of ZENworks devices. |
| Bundle | Select this option if you want to import the ZENworks bundle details. |

3. Click **Test**, to initiate a connection and test the setup.

| | | | | |

- 7. Click each item. The details are displayed on the right -hand pane.
- 8. Review the information, and select each individual device folders, groups, software type, and Bundles that you want to import from ZENworks.

NOTE: Selecting the parent folder doesn't select individual items in the folder or subfolders

9. Specify the Teams for the selected items

Specify if you want the item number to be generated by the system or manually. This option becomes available only if the Edit Item number is set to Yes in Setup >Privileges >System.

For software and bundles, select the **Create Relationship with Hardware** check box to create relationships after import.

- 10. Click Apply in each of the Item category tab to save you selections.
- 11. Navigate to ZENworks Import tab and click **Import** to start importing the selected items from ZENworks into the CMDB.

5.16.2 AMIE Import Alert

Alerts are generated for the Admin User after the AMIE synch is completed. The import alert summary displays:

- the details of the system that the synchronization was run against, as it is possible to import from multiple sources.
- the number of assets found in the datasource.
- the number of assets automatically created if a single datasource is configured in AMIE and the auto-create option is enabled; or if the Auto-Create option is disabled and Items already exists in the system, the number of Items that were updated.
- the number of AMIE Snapshots successfully imported, with a breakdown of new Items added and number of Items updated.

5.16.3 AMIE XML Migrate

The AMIE XML Migrate option that is available within the ZENworks Import tab enables you to migrate the existing or older, System provided AMIE XML format to the ZENworks UI format.

| General ZENwork | s Import | | |
|------------------------------|---------------------------------------|-------------------------------------|--------------|
| Select a configuration (sing | le select) you wish to migrate to the | ZENworks Import UI format and click | Migrate. |
| Migrate | | | |
| Server | Identifier | Server Type | Last Updated |
| | ZENworksServer AMIE | ZENworks Configuration Management | |

Migrating the configuration from XML

To migrate the system provided AMIE XML files to ZENworks UI format:

- 1 Select an XML AMIE configuration you wish to migrate from the displayed list.
- 2 Click Migrate

| | Information | | | | | | |
|----------|----------------------------------------------------------------------------------------------------------------|-------------|--------------|--|--|--|--|
| | Started migration from AMIE. | | | | | | |
| | | | | | | | |
| ZENworks | Setup | | | | | | |
| Ge | General ZENworks Import | | | | | | |
| 9 Select | Select a configuration (single select) you wish to migrate to the ZENworks Import UI format and click Migrate. | | | | | | |
| Migrate | 2 | | | | | | |
| Server | Identifier | Server Type | Last Updated | | | | |
| | 0 - 0 of 0 Results | | | | | | |

NOTE: You can only migrate the System provided AMIE configurations (XML files). You cannot migrate the customized configurations to the ZENworks UI format. It is recommended that you continue to import items from your customized configurations.

You cannot start a migrate if the selected configuration is importing items because it might cause a conflict with the data that is being imported. You can start migrating the configuration only after the Item import is complete.

NOTE: Service desk now uses service name of the Oracle database configured with ZENworks. While using the Oracle database, if you are unable to connect to ZENworks, see ZENworks Core Admin for the service name.

Configuration Management System

| ी प्र | er | 🗟 Reports | የ My Account | 🚳 Setup | 🗅 СМБ |
|---------------|-----------|-------------------|--------------|---------|-------|
| Relationships | Durations | Incident Analyzer | | | |

Within the ITIL framework the Configuration Management System (CMS) includes the Knowledge Management Database (KMDB) and the Configuration Management Database (CMDB). Within the LiveTime CMS tab, the Administrator can define elements that are used within the CMDB, such as the terminology used to describe Item relationships and durations of warranties used by Service Contracts.

It also allows the Administrator to define parameters within Incident Management to implement proactive Problem Management.

NOTE: The CMS tab applies to Service Manager only.

6.1 Relationships

Relationships can be defined between Configuration Items of the CMDB to create a Service Catalog. The Catalog allows Users to assess the impact of a request on the organization. To build a Catalog, the Relationships are defined within the properties of a Configuration Item within Configuration Management.

To assist with the building of a CMDB, the Administrator refines the list of Relationship Types available for the Supervisor.

6.1.1 Edit or Create Relationship Types

To edit or create a Relationship Type:

1. Select CMS>Relationships

The Relationship Types screen appears.

| Relationship Types | | | |
|----------------------------------------|----------------------|----------|--------------|
| New | | | |
| Relationship | | <u>à</u> | Class |
| Deployed in / Host of | | | Hierarchical |
| Deployed in / Hosts web application | | | Hierarchical |
| Has connection / Connected to | | | Connection |
| Host of / Installed on | | | Hierarchical |
| Installed on OS / OS hosts application | | | Hierarchical |
| Manages Data / Uses Database | | | Connection |
| Parent of / Child of | | | Hierarchical |
| Parent of / Child of (Inherit Cost) | | | Hierarchical |
| Parent of / Child of (Inherit Owner) | | | Hierarchical |
| Provides Service / Provided By | | | Connection |
| | 1 - 10 of 13 Results | 🔿 🔿 | |

2. To edit, click on the Relationship, or, to create a Relationship click New

| Relationship Types | |
|----------------------------------------|--------------------|
| Relationship | |
| Class | Connection 💌 |
| Name | |
| Labels | |
| Service Oriented (Parent - Child) | |
| Component Oriented (Child - Parent) | |
| Inherit Parents Ownership | Yes No |
| Inherit Cost | Yes No |
| | Cancel Delete Save |

- 3. Select the Relationship Class
- 4. Enter a Name for the relationship
- 5. Define the Service Oriented and Component Oriented labels
- 6.

Relationship Types

Relationship

| Relationship Types | |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Class | Select either a Hierarchical or Connection Class. |
| | <i>Hierarchical</i> describes ownership, such as a Parent/ Child relationship, for example, an operating system hosting an application. |
| | <i>Connection</i> defines a connection association. For example, an application accessing a database. |
| Name | Enter a Name that reflects the nature of the relationship for both Component or Service views. For example, component view Name = Deployed in/ Host of. |
| Labels | Each Relationship between Items can be described from a Service Oriented or Component Oriented view. |
| Service Oriented (Parent-Child) | A Service Oriented view describes relationships top-down with the Service at the top. For example, the Service Email Provision, would be at the top level with relationships between Configuration Items described, ending at an individual User. |
| Component Oriented | A Component Oriented view starts from the bottom |
| (Child-Parent) | up, with the Service being the top layer. |
| Inherit Parent Ownership | When this option is enabled, Child Items that use this Relationship Type will inherit the Parent Item's owners. |
| Inherit Cost | When this option is enabled, Child Items that use this Relationship Type will inherit the costs associated with Parent Item. |

7. Click Save. Sample Relationship Labels

8.

| Relationship Class | Relationship Name | Current Item | Relationship Label | Related Item |
|--------------------|----------------------|--------------|--------------------|--------------|
| Service | Host of/Installed on | Application | is host of | Server |
| Component | Host of/Installed on | Application | is installed on | Server |

6.1.2 Delete a Relationship Type

To remove an entry on the Relationship Type list:

1. Select CMS>Relationships

The Relationship Types screen appears.

- 2. Click on the Relationship link that is to be deleted
- 3. Select the Delete button

A warning message is displayed.

| Relationship Types | |
|----------------------------------------|------------------------|
| Relationship | |
| Class | Hierarchical 💌 |
| Name | Host of / Installed on |
| Labels | |
| Service Oriented (Parent - Child) | is host of |
| Component Oriented (Child - Parent) | |
| Inherit Parents Ownership | Yes No |
| Inherit Cost | Yes No |
| | Cancel Delete Save |

4. Click OK in the warning message.

6.2 **Durations**

NOTE: Note, this menu option is only visible when Purchase Orders is enabled in Admin>Setup>Billing.

Note, within the *Help Desk* application this option is found within Supervisor>Service tab.

The Durations menu is used to configure periods of time used for warranty and lease durations. They appear as a drop-down list when a default Warranty Service Level Agreement (SLA) is assigned to an Item Type. The duration selected determines the length of the warranty period.

Within Purchase Orders, the Lease Durations appear when a PO is created for leased Items, to specify the lease period.

| Durations | |
|--------------------|---------------------|
| New | |
| Interval Name | ≣ Duration (days) 🛓 |
| 30 days | 30 |
| 90 days | 90 |
| 6 months | 183 |
| 12 months | 365 |
| 2 years | 730 |
| 3 years | 1095 |
| 4 years | 1460 |
| 5 years | 1825 |
| 1 - 8 of 8 Results | |

Within the Duration menu, a number of default durations exist. These can be edited or new durations created.

6.2.1 Creating or editing durations

To create or edit durations:

1. Select CMS > Durations

(In the Help Desk application as a Supervisor select the Service > Durations tab)

2. Select the New button to create a new duration

Or, click on the duration Interval Name to edit an existing duration. The individual Duration screen appears.

| Durations | | |
|----------------|--------|------|
| Duration | | |
| Interval Name | | |
| Length In Days | | |
| | Cancel | Save |

- 3. Enter the required interval name
- 4. Define the time period for the Duration
- 5. Click Save.

6.2.2 Delete a Duration

To remove an entry on the Durations list:

1. Select CMS>Durations

The Durations screen appears.

- 2. Click on the Duration link that is to be deleted
- 3. Select the Delete button

A warning message is displayed.

| Durations | | | | |
|----------------|---------|--------|--------|------|
| Duration | | | | |
| Interval Name | 3 years | | | |
| Length In Days | 1095 | | | |
| | | Delete | Cancel | Save |

4. Click OK in the warning message.

6.3 Incident Analyzer

NOTE: Relevant to Organizations with system implementations using Problem Management.

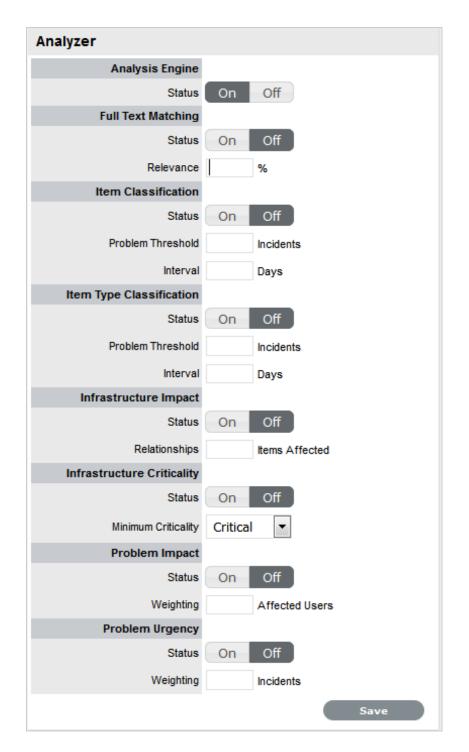

The Incident Analyzer menu is used to set parameters to provide proactive Incident and Problem analysis. The Analysis Engine automates inter-process escalation between the Incident and Problem Processes. It automatically groups similar Incidents into a Problem based on the criteria set in the Incident Analyzer tab. Also, the Analysis Engine is able to retrieve Problems relevant to an Incident and present them for consideration.

A Problem is used to manage a number of Incidents related to one cause or Incidents associated with highly critical Items. Problems are managed through the Problem Management Process.

6.3.1 Configuring the Incident Analyzer

To configure the Incident Analyzer:

- 1. Select CMS>Incident Analyzer
- 2. Click On to enable the Analysis Engine The Analyzer screen expands.

- 3. Enable the relevant Analyzer functions
- 4. Define the relevant parameters for one or all of the following options:

5.

| Field | Description |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Text Matching | Searches for matching text between Incidents and Problems. We recommend the Relevance percentage be set between 75-80%. |
| Item Classification | Searches Incidents based on matching the Item and Problem Classifications. If the number of Incidents entered in the Problem Threshold is met within the Time Interval entered, a new Problem will be created. |
| Item Type Classification | Searches by matching Item Type and Problem Classification of Incidents. If the matching number of incidents in the Problem Threshold for the Time Interval is met, a new Problem is created. |
| | NOTE: Note: We expect either Item/Classification or Item Type/Classification would be used exclusively. |
| Infrastructure Impact | Automatically escalates an Incident to a Problem in the number of related Items affected by the Incider is equal to or greater than the value entered here. |
| Infrastructure Criticality | Automatically escalates an Incident to a Problem in an Incident's Item criticality is equal to or greater than the value selected here. Select the criticality level from the drop-down list. |
| Problem Impact | Used to calculate the relevant impact rating that is assigned to an auto-created Problem. |
| | Multiplying by 4 the number entered in the Weighting field will give the required number of Affected Users for the problem to have the highest Problem Impact of Severe. |
| | The system calculates the number of Affected Users on the number of owners attached to an Iter |
| | An integer between 1-6 for the Problem Weighting is recommended. |
| Problem Urgency | Used to calculate the relevant urgency rating that i assigned to an auto-created Problem. |
| | Applied when a new Problem is created or an Incident is added to an existing Problem. |
| | Multiply by 4 the number entered in the Weighting field to get the required number of current Incident or Problems for the rating of Urgent to be applied. |
| | An integer between 1-4 for Problem Urgency is recommended. |

6. Click Save.

A Appendix

A.1 Embedded Support Form

To create requests directly from a website, add the following script, with an amendment to the Protocol and BaseHost details, to the target Web Site Page Source:

<script type="text/javascript" defer="defer">

var protocol = "https://"; // use "http://" if not running ssl

var baseHost = "servicedesk.mycompany.com"; // service desk hostname

document.write(unescape("%3Cscript src='' + protocol + baseHost + "/LiveTime/js/livetime.js'
type='text/javascript'%3E%3C/script%3E"));

</script>

In the above script, adjust the details for the protocol and baseHost, to those of the server hosting the support system.

The following functionality is now accessible from your designated Web Site:

| | | | | Wed, 2 Mar 2016 02:15:40 🏼 🏾 🎦 Help 🕞 Logout |

A.2 Email Polling and Request Creation via Email

The Email Polling feature automatically manages incoming support requests via email, helping organizations to respond quickly and efficiently to Customer inquiries and minimizes time-consuming data entry tasks for Technicians.

A.2.1 Email Polling

By itself, the Email Polling feature acts as an auto-responder.

To turn on Email Polling:

- 1. Log in as Administrator
- 2. Select Setup>Email
- 3. Enter the Server Details

These are the system accounts for the incoming and outgoing mail servers.

4. Within the Setup Tab, select Yes for Email Polling

5. Complete the Interval field

Specify (in minutes) how long the system should wait between automated scans of the system email account. (At minimum this can be set to 5 minutes.) At the specified interval, the system will automatically scan the inbox of the system email address for messages.

6. Define remaining General, Requests and Notes Settings:

| General Settings | |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Email Polling | Enable Email Polling to allow the application to check for new email received in the mailbox on the incoming server defined within the Server tab. |
| | For new messages that are received, the system will send a message to the sender acknowledging their message. System generated messages are customized within the Setup>Email>Templates tab. |
| | NOTE: This option will be locked down if the Create via Email option is selected. |
| Interval | Enter the time period the system will use to check the incoming server for any messages sent to the support system. |
| Include Banner | Select Yes to include a banner within emails sent from the system. |
| | The banner will be derived from: Setup>Customize>Setup>Public Banner. |
| Email Errors | When enabled, details of any system errors occurring while the application is running will be sent to the development lab. |
| Сору Туре | For emails sent within requests, define if the Technician is to be copied or blind copied the correspondence. |
| Requests | |
| Create/Update via Email | Select this option to enable requests to be created from emails addressed to the support system and Team addresses aliased on the email server. |
| | NOTE: Email Polling will be locked down to Yes when this option is selected and the Accept Anonymous option is displayed. |
| Accept Anonymous | When enabled, the system will create requests from emails received from email addresses that do not exist in the application's database. (Refer below for more information regarding this setting.) |
| Notify Alternate Team | When enabled, and if there is more than one Team created for a Process, within the Summary tab of a request the Alternate Team field is displayed. Members of the Alternate Team will be notified relative to the settings defined for the Current Team, and for New Notes, if Technicians is selected in the New Notes screen. |

| General Settings | |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Self Mail | When set to Yes, new Notes created by a Technician or Customer are also sent to them when they save the Note. |
| Include Request Status | When enabled, the system will include the request Status within the Email Subject line of any correspondence sent from the system, regarding a request. |
| Include Request Priority | When enabled, the system will include the request Priority within the Email Subject line of any correspondence sent from the system, regarding a request. |
| Include Request Subject | When enabled, the system will include the content from the Subject line of a request within the Email Subject line of any correspondence sent from the system, regarding a request. |
| Notes | |
| Parse Instance Prefix | The Instance prefix is used to process email correspondence from multiple instances. If this is not required, set the option to No. |
| Default Recipients | Within the new Notes editor of requests, the default email settings can be defined for the recipient groups. Define the groups who are more likely to be sent every New Note created related to a request. |
| Default Locale | Set the default language file to be used for email correspondence. The option set is applied to the Email Locale field in the Customer and User Information screens and can adjusted on a per account basis, as required. |
| | NOTE: The content for automated emails sent from the system for languages other than English, is defined within the Localization>Content tab. |

7. Click Save

8. Customize the content of emails automatically sent by the system within the Templates tab

This includes Handshaking (CloseRequest), No Account and Signature Templates. The message prefix used by the system to recognize correspondence related to requests stored in the system can also be edited within the Prefix template.

If the request creation feature is turned off (i.e., the Create Incidents checkbox is not ticked), a reply is automatically emailed to the sender. The email informs the sender that requests are not received via email, and if they want to log a request they are advised to do so via the Customer Portal. The content of the Responder message can be configured by the Administrator in Setup> Email>Templates.

NOTE: Important: Before using the Email Polling feature, ensure that the main system email accounts inbox is empty. Otherwise, any messages in the inbox will be acted upon either with an auto-response message being bounced back to the sender or the system will attempt to create requests for the messages. The action will depend on the application's settings.

Please take special caution if the main system email account is an IMAP account. Unlike POP accounts, messages generally are not removed from an IMAP server's inbox after they are read. This means that failure to clear out the inbox prior to using the Email Polling feature could result in auto-responses being sent to (or requests being created for) every message in the inbox.

A.2.2 Creating requests via Email

If the Create Incidents feature is turned on, the system will attempt to either create a new request or update an existing one each time a message arrives in the system inbox.

To activate this feature:

- 1. Tick the Create/Update via Email checkbox under Setup>Email>Setup
- 2. If all Team members are to receive a copy of the notification that a new request has been received, set the Notify Alternate Team option within the Information tab of the Team.

To create a request via email, a Customer with a pre-existing account can simply send an email message describing the issue to the appropriate Team email address (refer to Setting Up Team Aliases, below).

When a new message arrives, the system identifies the Customer by matching the sender's email address against the addresses of Customers registered in the database. If it fails to find a match, an email is bounced back to the sender notifying them that they must create an account before creating requests via email. The content of this message is configured in the No Account field under Setup>Email>Messages.

If a matching Customer account is found, and the address that the email was sent to belongs to an existing Team, a request is created in the system. The body of the email becomes the main text of the request description. Any attachments included with the email will also be attached to the request. The new request is assigned a priority type of Medium, and uses the default Classification - General.

If the Customer only owns a single Item, this Item is automatically assigned to the request and the standard system SLA check of Customer>OrgUnit>Item will be run to verify which SLA should be assigned to the request.

If the Customer owns multiple Items, the system can automatically assign the relevant Item upon request creation if the Customer prefixes the email subject with 'Item #' followed by the Item identification number as recorded in the CMDB. If the Customer has an account in the system and is assigned as an owner of the Item, the system will refer to Relationships and Skills configured in the CMDB, resulting in the request being routed to the most relevant Technician for the job.

NOTE: If you want to create a request against a specific item through an email, the email subject must be prefixed with 'Item #' followed by the Item identification number as recorded in the CMDB in the following format:

1. If Item identification include spaces, use: Item # <item_identification>

Example: Item # <ZENworks Agent>

2. If the item identification does not include spaces, use: Item # <item_identification> or Item # item_identification

Example: Item # 102345 or Item # <102345>

In the case where the "Item #" is not included in the email subject line, and if the matching Customer is assigned zero or multiple Items, the new request uses the Unknown Item and the system default SLA. It is assigned to the Team or Technician who support the Unknown Item. When the Item is

changed from Unknown to a specific Item, the Team or Technician assigned may change based on the Team configured to support the Item. The SLA may also be automatically reset by the system as it applies the SLA derivation logic of Customer>OrgUnit>Item to assign the relevant SLA.

Once the request has been created, an entry is added to the request Audit Trail, stating the request was generated via email. The Customer and the assigned Technician then receive emails notifying them of the request number and details.

A.2.3 Restricted Incoming Email Addresses and Subjects

Incoming email addresses that cannot be processed.

Sender should not have any of the following:

- 1. postmaster@
- 2. daemon@
- 3. noreply@
- 4. donotreply@

Also Sender should not start with 'no-reply'.

Subject should not contain any of the following:

- 1. undeliver
- 2. returned mail
- 3. mail error
- 4. autoreply
- 5. autoresponse
- 6. no such user found

A.2.4 Monitoring Tools and Request Creation

To automatically create requests from emails sent by monitoring tools, the monitoring tool must be created as a Customer within the system. The email address used by the monitoring tool can be the system default support address or a specific Team address. (See: Setting up Team Aliases below for sending to a Team address.) Once the request is created, an entry is added to the request Audit Trail, stating the request was generated via email. The monitoring tool Customer account and the assigned Technician receive emails notifying them of the request number and details.

If the monitoring tool Customer account is assigned to a single Item, this Item is automatically associated with the request and the standard system SLA check of Customer>OrgUnit>Item will be run to verify which SLA should be assigned to the request.

If the monitoring tool Customer account is associated with multiple Items within the CMDB, the system can automatically assign a specific Item upon request creation if the monitoring tool email prefixes the email subject with 'Item #' followed by the Item identification number as recorded in the CMDB. In this situation, if multiple Customers own the Item and if the request is to be associated with a different Customer after the request is created, Technicians can update the Customer details to move it from the monitoring tool Customer account within the Customer tab of the request Summary Tab.

In the case where the "Item #" is not included in the email subject line, and if the matching monitoring tool Customer account is assigned zero or multiple Items, the new request uses the Unknown Item and the system default SLA. It is assigned to the Team or Technician who support the Unknown Item.

When the Item is changed from Unknown to a specific Item, the Team or Technician assigned may change based on the Team configured to support the Item. The SLA may also be automatically reset by the system as it applies the SLA derivation logic of Customer>OrgUnit>Item to assign the relevant SLA.

A.2.5 Adding Notes via Email

Managing requests via email is handled by the application sending its initial email with the subject line prefixed by the 'Incident #' or in the case of Change Management, prefixing the RFC subject line with 'Change Request #', followed by a series of numbers that make up the individual request identification number. Customers simply reply to this email and their correspondence is assigned to the relevant request, and any attachments are also uploaded to their request. Technicians can also reply to these emails to update the request, if convenient.

When the Note has been created, an entry is added to the request Audit Trail, indicating that a Note was added via email. The Customer and assigned Technician are then sent emails alerting them to the creation of a new Note.

A.2.6 Setting Up Team Aliases

For an incoming message to result in the successful creation of a request, it must be addressed either to the main system email address or to an email account that is an alias for the main system account and assigned to an existing Incident, Change or Service Request Team.

For example, if your main system email address is support@yourcompany.com and you want to set up three Teams, Team A, Team B and Team C, those three Teams should use email addresses that are aliases for support@yourcompany.com.

- teamA@yourcompany.com should forward messages to support@yourcompany.com
- teamB@yourcompany.com should forward messages to support@yourcompany.com
- teamC@yourcompany.com should forward messages to support@yourcompany.com.

NOTE: Consult the documentation that came with your mail server for information on setting up email aliases.

Using this technique, any message that is sent to teamA@yourcompany.com, teamB@yourcompany.com or teamC@yourcompany.com is automatically forwarded to support@yourcompany.com. The Email Polling mechanism then picks up those messages and responds accordingly. The resulting request is assigned to a Technician within the Team the message was addressed to.

An alternate configuration would involve setting a single Team's email address to the main system address, which by-passes the need for aliases but does not allow the system to funnel requests to specific Teams.

A.2.7 Troubleshooting

If you have trouble setting up or using email polling and creation, keep the following tips in mind:

- For the request creation feature to work properly, both the Email Polling and Create/Update via Email options must be selected under the Admin>Setup>Email>Setup tab
- Only emails sent to the main system address or to an alias that is currently in use by an existing Team can be accepted

- All pertinent information regarding the main system email address and the incoming and outgoing mail servers must be completed correctly
- Ensure the Customer sending the email has a valid email address within the system.

NOTE: Only Incidents, Change and Service Requests can be created via email. If a User attempts to send an email to a Problem Team, a reply email will be forwarded to them informing the User that the email must be sent to an Incident, Change or Service Request Team, for a request to be logged with the system.

A.3 Web Services

The Web Services Interface enables third party applications to interact directly with the service management application in a secure and controlled fashion. The interface is based on the SOAP standard for Web Services. For more information about SOAP Web Services, please see: http:// www.w3.org/standards/webofservices/.

The system's Web Services Interface is intended for developers to use to extend the application's accessibility and requires a basic familiarity with Java. For detailed information and instructions, see Service Desk Documentation (https://www.novell.com/documentation/zenworks-service-desk-75/) site, and for support, please contact Micro Focus Customer Support.

A.4 Internationalization

Internationalization is the process of designing an application so that it can be adapted to various languages and regions without engineering changes. Sometimes the term internationalization is abbreviated as i18n, because there are 18 letters between the first "i" and the last "n."

The system is an internationalized program that has the following characteristics:

- · The addition of localized data that allows the same executable to run worldwide
- Textual elements, such as status messages and the GUI component labels, are not hard-coded in the program. Instead they are stored outside the source code and retrieved dynamically
- · Support for new languages does not require re-compilation
- Culturally-dependent data, such as dates and currencies, appear in formats that conform to the end user's region and language
- The application can be localized quickly.

Localization is the process of adapting software for a specific region or language by adding localespecific components and translating text. The term localization is often abbreviated as I10n, because there are 10 letters between the "I" and the "n."

A.4.1 Internationalization

The support system internationalized framework is very intuitive and flexible, which allows Users to localize it for a particular language and character encoding schema.

The primary task of Users performing localization of the application is translating the user interface elements in the external text file - LiveTime.properties.

The following steps are a guide through the localization process. This example assumes French localization of the application and uses the ISO-8859-1 character set.

1. Ensure the Desktop's Operating System has the appropriate character set installed

The localization file and rendering requires the character set to be available for data entry and data presentation.

2. Ensure the RDBMS is created using the appropriate character set

This is required so that French data entry can be successfully saved and retrieved from the database.

3. Specify the correct character set encoding for the system

Edit the 'Properties' file (/CONTAINER_APPS_PATH>/LiveTime/WEB-INF/LiveTime.woa/ Contents/Resources folder) and specify the character set to use for presentation to the end user. This character set is sent to the end users to control presentation in both the user interface and outbound email.

4. Edit the UI strings in the external properties file

The 'LiveTime.properties' file (/CONTAINER_APPS_PATH>/LiveTime/WEB-INF/LiveTime.woa/ Contents/Resources folder) stores the externalized user interface content. This file is stored in plain text, the default (English) is encoded using the ISO-8859-1 character set. Alternative versions of this file can be created in any text editor that allows the file to be saved in the necessary character set.

The first step in creating a local version of this file is to save a copy of it, representing the appropriate language. For this example of the French translation, there is no need to worry about the file encoding, simply save a copy of the file called 'livetime_fr.properties'

A.4.2 Simple Messages

The copy of this file consists of a collection of name-value pairs, each are broken up into clusters representing user interface components.

For example:

ClassName.greetings=Hello

ClassName.farewell=Goodbye

ClassName.inquiry=How are you?

The 'name' or 'key' section (ClassName.greetings) of these strings is of little relevance to the end user except to note that if they are changed, the system is not able to look them up.

The 'value' component of these pairs (Hello) represents the corresponding user interface value. The (French) translator can safely edit these values and they will appear within the system.

ClassName.greetings=Bonjour.

ClassName.farewell=Au revoir.

ClassName.inquiry=Comment allez-vous?

A.4.3 Compound Messages

Compound messages contain variable data i.e., data that the support system substitutes into a message at run time. For example, given the message 'Hello Sunshine', the string Sunshine may vary. This message is difficult to translate because the position of the string in the sentence is not the same in all languages, or alternatively the value may need to be generated by the application based on some business logic.

Where this substitution is necessary, the localized strings have a set of braces containing an id number (a substitution variable). These blocks are replaced at run time by the system and are identified by its presence. The localized version of a given string must contain the same number of substitution variables.

For example:

ClassName.helloSunshine=hello {0}

This will render as "hello sunshine", however we could modify this message to read "sunshine, hello" by doing this:

ClassName.helloSunshine={0}, hello

1. Edit the Locale Definitions file

The 'LiveTimeLocales.xml' file (/Resource folder) defines the language code and charset used in order to process the strings defined in the external properties file.

Typically, this is the charset used when the external properties file is saved.

By default the following language locale is selected:

<LOCALE language="en" country="" charset="ISO-8859-1"/>

To enable the French external properties file to behave correctly, comment the above line and uncomment the following line:

<LOCALE language="fr" country="" charset="ISO-8859-1"/>

For convenience, many values are already supplied in this file so it is just a matter of uncommenting the necessary entry.

If an entry for the locale language is non-existent, then define it in the file by supplying the language code, country code, and charset, as illustrated in the above examples.

1. File Names.

The names of the localized files do follow a standard. In the French example, livetime_fr.properties was the resulting file name. The 'fr' component of this name comes from iso 639-1. A full list of these codes is available here:

http://www.ics.uci.edu/pub/ietf/http/related/iso639.txt

Example of Login Page Translated:

A.5 AMIE Import

The Item Import menu allows Configuration Items to be imported from an external asset management database using Database Mapping (AMIE) and via a .CSV file.

Database Mapping with the AMIE option can be used with common asset management systems, including:

- Absolute Manage 6.0
- Centennial Discovery 2005, 9
- Express Software Manager 9.0, 9.5
- HP Universal CMDB 8.0
- LANDesk 8.5, 9.0, 9.0 (Hardware)
- LANrev 5.1
- LiveTime Discovery 2005, 2007
- LOGINventory 4.3
- Manage Engine Desktop Central 7.0
- Microsoft SMS Version 2003 SP1
- Microsoft SCCM 2007
- Spiceworks 4.0, 5.0

- ZENworks Asset Management 6.5+
- ZENworks Configuration Management 11.1, 11.1 (Hardware).

If Items have been managed externally, adding them to a .CSV file allows them to be easily imported into the support system.

See Item Import:

- AMIE
- CSV File.
