

ZENworks Mobile Management 3.2.x

Adding ZENworks Mobile Management Servers to a GroupWise Mobility System

If you define GroupWise Mobility servers as ActiveSync servers in your ZENworks Mobile Management system, you must also define the ZENworks Mobile Management servers in the GroupWise Mobility system. This allows ZENworks Mobile Management servers to communicate with the GroupWise Mobility system.

- 1 Log in to the GroupWise Mobility Admin console.
- 2 Click *Service Configuration*.
- 3 On the General page, scroll down to the *MDM Server* field.
- 4 Specify the IP address of the ZENworks Mobile Management server.

If the ZENworks Mobile Management system includes multiple servers, specify their IP addresses in a comma-delimited list.

- 5 Click *Save* to your changes.
- 6 Restart the Mobility Service:

```
rcgms restart
```
